Binder, Loose-leaf. E. Hasel, Jr. 2,472,898, June 14.
Blade, Adjustable rotor. H. W. Bonnett. 2,473,134, June 14.
Blood filter. R. K. Lager. 2,473,153, June 14.
Blowpipe for heating tools. B. C. Lusader, Sr. 2,473,435, June 14.
Board: *See*—
Miniature golf game board.
Bolster for four-wheel commercial and farm trailers. O. A. Klocken. 2,473,340, June 14.
Bolt head and extractor for firearms. J. D. Howell. 2,473,373, June 14.
Bonding machine. J. P. Graham and W. R. Church. 2,472,820, June 14.
Bonding machine, Electrostatic. J. P. Graham and R. D. Lowry. 2,473,143, June 14.
Boot, Trapper's hip-length. J. M. Hatch. 2,473,099, June 14.
Boron carbide articles, Method and mold for making. J. W. Knowlton. 2,473,476, June 14.
Bottle carrier. H. L. Hinman. 2,473,429, June 14.
Bottle, Nonrefillable. W. Keenan. 2,472,950, June 14.

Box: *See*—
Self-adjusting slip box.
Box tool. K. Fullroth. 2,473,418, June 14.
Brace for doors and the like. J. H. Boye. 2,472,936, June 14.
Bracket: *See*—
Awning bracket. Venetian blind bracket.
Brake: *See*—
Bicycle coaster brake.
Brake. L. S. Bargett. 2,473,360, June 14.
Brake beam. W. H. Baselt. 2,473,002, June 14.
Brake beam, Railway. S. J. Walker and I. J. Spaeth. 2,473,316, June 14.
Brake beam, Trussed. W. H. Baselt. 2,473,001, June 14.
Brake rotor. W. L. Schlegel, Jr. 2,473,046, June 14.
Brassiere. A. H. Cummings. 2,472,940, June 14.
Bread, Delivering. E. W. Thomas. 2,472,993, June 14.
Bridge, Elevator. E. E. Alexander. 2,473,127, June 14.
Bridge, Elevator door. E. E. Alexander. 2,473,128, June 14.
Bridge, Freight platform. E. E. Alexander. 2,473,126, June 14.
Broeder, Fireless. N. Lundstrom. 2,472,909, June 14.
Buckle. C. Lombardi. 2,473,209, June 14.
Buckle, Reversible. D. A. Seaver. 2,473,225, June 14.
Building compositions, Producing fibrous. C. M. Baskin and N. W. McLeod. 2,473,190, June 14.
Building construction. A. H. Parsons. 2,473,216, June 14.
Building structure. T. J. Edwards. 2,473,017–18, June 14.
Bulb manipulating device. G. R. Chadsey. 2,473,008, June 14.
Bulb socket manipulator. G. R. Chadsey. 2,473,009, June 14.
Butadiene emulsion polymerization process, including mercaptan and cyanide modifiers. H. F. Bose and M. K. Rowan. 2,473,390, June 14.
Cabinet having a vertically swingable section, Wall. C. P. Boyd. 2,473,239, June 14.
Cable guide arm and torque control switch, Combined. J. D. Russell. 2,472,860, June 14.
Caffein, Recovering. C. R. Bender. 2,472,881, June 14.
Caliper, Micrometer. A. A. Adams. 2,472,875, June 14.
Cam making machine. G. X. Johnston. 2,472,902, June 14.
Cambering machine, Spring. G. R. Reed. 2,473,445, June 14.
Camera boom, Gyroscopically stabilised. E. Furer and C. B. Lonon. 2,472,944, June 14.
Camera having handgrip operating means, Combat. W. R. Harlow. 2,472,923, June 14.
Capacitor, Heat-resisting. F. M. Clark. 2,473,242, June 14.
Capacitor, Parallel plate. J. F. Byrne. 2,473,240, June 14.
Car mover. J. A. Schneider. 2,473,109, June 14.
Carrier: *See*—
Bottle carrier.
Carton, Reclosable. F. C. Shina. 2,473,492, June 14.
Carton, Reclosing. R. Guyer. 2,473,055, June 14.
Cartons, Method and apparatus for producing. S. Bergstein. 2,472,883, June 14.
Cartridge belt link. A. F. Galdos. 2,472,817, June 14.
Case: *See*—
Open-top refrigerated dis- play case.
Spectacle case.
Case and table, Combined carrying. O. E. Fenske, Jr. 2,473,022, June 14.
Casting, Curb inlet. De W. S. Crocker. 2,473,279, June 14.
Casting machine for lining bearings. W. H. Tobener, Jr. 2,473,481–2, June 14.
Casting of metal tubes, Method and apparatus for the continuous. I. Rossi. 2,473,221, June 14.
Catch. R. A. Stone. 2,473,181, June 14.
Cathode coating for electron discharge devices. O. S. Bright, Jr. 2,473,358, June 14.
Cathode-ray tube. A. H. A. Wynn and R. A. Hill. 2,473,320, June 14.
Cellulose, Preparing regenerated. G. D. Hiatt and C. L. Crane. 2,473,473, June 14.
Cellulose, Washing. J. W. Ahquist. 2,472,877, June 14.
Chair: *See*—
Folding push chair.
Telescoping collapsible chair.
Chair with folding table leaf. E. B. Morgan and R. W. Clay. 2,473,037, June 14.
Chamber for surgical uses, Sterilized and air-conditioned. R. Letac. 2,473,033, June 14.
Checkerboard, Electromagnetic. J. M. Moon. 2,472,910, June 14.
Chord indicator. L. Ruben and E. J. Zelk. 2,473,222, June 14.
Chuck, Combination diaphragm and clamp. T. H. Ljungren and G. M. Green. 2,473,380, June 14.
Chucking mechanism, Center drive lathe power. W. R. Meyer and H. J. Siekmann. 2,473,108, June 14.
Circuit: *See*—
Counting tube transfer cir- cuit.
Voltage multiplying circuit.
Potentiometric circuit.
Circuit breaker, Combined thermal-magnetic. K. Dannenberg. 2,473,196, June 14.
Circuit breaker mounting means. W. M. Scott, Jr. 2,472,901, June 14.
Circuit for control apparatus, Sensitivity equalising. R. F. Wild. 2,473,401, June 14.
Circuits, Electric valve control. M. E. Bivens. 2,473,238, June 14.
Circuits, Tunable electrical. M. J. O. Strutt and J. M. van Hoftwegen. 2,473,310, June 14.
Clamp: *See*—
Hose clamp. Pipe clamp.
Clamp for attachment to tubular lamps, Lamp-rotating. R. T. Riker and J. H. Molat. 2,472,858, June 14.
Clamp for pressing machines, Cover. H. W. Winters. 2,473,085, June 14.
Clamping device, Cable. C. R. Pieper. 2,473,071, June 14.
Cleaner: *See*—
Smoking pipe cleaner. Vacuum cleaner.
Clip: *See*—
Molding clip. Plug-in clip.
Clothes hanger. G. T. Alkin. 2,473,408, June 14.
Clutch: *See*—
Overload or fixed load clutch.
Clutch control mechanism, Vehicle. R. E. Burrus. 2,472,780, June 14.
Coating machine for flexible sheet materials. J. Ettl. 2,473,243, June 14.
Coffee filter. J. W. Myers. 2,472,955, June 14.
Coil for weed burners and pear burners. J. B. Blackwell. 2,473,192, June 14.
Comparator, Potential. O. A. Tyson. 2,473,457, June 14.
Composition comprising a copolymer of vinyl chloride-vinyl acetate and ground peanut hulls and making same. H. M. Kniman. 2,473,030, June 14.
Composition for and method of chemically coating aluminum. F. P. Spruance, Jr. and J. H. Thirsk. 2,472,864, June 14.
Composition suitable for the construction of roads, paths, floors, aerodrome runways, and the like. J. F. T. Blott. 2,473,326, June 14.
Computing system. J. A. Rajchman. 2,473,444, June 14.
Condensation of zinc from its vapor in gaseous mixtures. S. Robson. 2,473,304, June 14.
Condensation products of citric acid with long chain aliphatic monohydric alcohols. J. H. Wernts. 2,473,460, June 14.
Condition responsive switch. J. C. Roache. 2,473,075, June 14.
Connecting rod. W. W. Hamill and R. S. Crump. 2,473,096, June 14.
Connection for vehicle coupling and steering devices, Double universal. J. H. Hyler. 2,473,375, June 14.
Connector for ironing boards, Dual reel wire. I. Mendelsohn. 2,473,107, June 14.
Constant velocity universal joint. F. F. Miller, Jr. 2,473,036, June 14.
Contacts, Making. R. C. Heath, W. R. Howe, and W. E. King. 2,473,371, June 14.
Container: *See*—
Dispensing container. Line dispensing container.
Container. E. A. Pardee. 2,472,985, June 14.
Container. W. A. Roselle. 2,473,391, June 14.
Container seams, Electric butt-welding metallic. H. J. Paynter. 2,472,848, June 14.
Control apparatus. M. Gottlieb and F. A. Meyer. 2,472,895, June 14.
Control for ranges. J. F. Dunn. 2,472,705, June 14.
Control means for internal-combustion-operated free-piston machines. E. S. L. Beale. 2,472,934, June 14.
Control mechanism. A. K. Gaylord. 2,473,094, June 14.
Control mechanism, Fire escape. J. J. Jaszlieck. 2,473,205, June 14.
Control system, Follow-up. E. F. W. Alexanderson, M. A. Edwards, and G. A. Hoyt. 2,473,235, June 14.
Control system for cathode-ray tubes, Voltage. A. W. Comins. 2,473,330, June 14.
Controller, Electric. C. L. Perry. 2,473,256, June 14.
Controlling torch spacing, Method and apparatus for. H. O. Klinker. 2,472,951, June 14.
Converter, Line balance. G. H. Brown and O. M. Woodward, Jr. 2,473,328, June 14.
Conveyer, Reciprocating. D. C. Campion. 2,473,193, June 14.
Conveyer system, Multiple belt. F. J. Blume. 2,472,803, June 14.
Copper base alloy. K. H. Koopman. 2,473,028, June 14.
Cord protector and strain reliever for use with electrical connectors. E. E. Reder, Jr. 2,472,986, June 14.
Corn products, Manufacture of. D. W. Hansen 2,472,971, June 14.
Corset attachment. J. L. Holt. 2,472,974, June 14.
Corset, Form of. W. Namegah. 2,472,982, June 14.
Counting tube transfer circuit. H. T. Lyman, Jr. 2,473,159, June 14.
Coupler, Tubing. I. G. Rambo. 2,473,388, June 14.
Coupling: *See*—
Fireless tube coupling. Ultra high frequency coupling.
Hose coupling.
Quick detachable coupling.
Coupling for brittle pipes. J. H. Kroops. 2,473,102, June 14.
Coupling for fireless tubes. J. N. Wolfram. 2,473,119, June 14.
Coupling for tubes. J. N. Wolfram. 2,473,118, June 14.

Coupling for tubes. J. N. Wolfram 2,473,120, June 14.
Coupling pipe. H. O. Guenthner. 2,473,283, June 14.
Coupling with unitary die cast vane structure, Fluid. E. A. Weiss. 2,473,185, June 14.
Cracking catalyst. R. E. Schermaiider, Jr., and E. A. Hunter. 2,472,834, June 14.
Crate having lifting means. C. A. Connolly. 2,472,939, June 14.
Cross strip, Antiskid. B. Hershman. 2,473,249, June 14.
Cup for cleaning drainpipes and the like, Force. E. L. Scott. 2,473,452, June 14.
Cup positioning apparatus. A. A. Quimper. 2,472,921, June 14.
Cup, Teat. H. O. Lindgren. 2,473,379, June 14.
Curler, Hair. A. E. Vanzhn. 2,473,115, June 14.
Curtain, Ruffle. F. S. Nichols. 2,472,956, June 14.
Cushion, Bench. L. J. Thompson. 2,473,312, June 14.
Cushioning means for calculating machines, Carriage. H. Gang. 2,473,471, June 14.
Cutter: *See*—
Glass cutter. Vine cutter.
Cutting and welding machine. H. A. Huff, Jr. 2,472,948, June 14.
Cyclohexene, Manufacture of. E. Gorin and A. G. Oblad. 2,473,472, June 14.
Damper for fireplaces, furnaces, and the like, Adjustable flue or chimney. E. A. Streta. 2,473,182, June 14.
Damper, Vibration. J. A. Hardy. 2,473,335, June 14.
Depressant for oil compositions, Pour point. R. J. Hawes, W. F. Behrman, and C. A. Campbell. 2,473,370, June 14.
Detecting flaws, Method and apparatus for. W. C. Barnes and H. W. Keevil. 2,472,784, June 14.
Detector and indicator system, Standing wave. D. Blitz. 2,472,785, June 14.
Developing high magnetic permeability and low core loss in very thin silicon steel. M. F. Littmann. 2,473,156, June 14.
Device for lifting and transporting objects. A. J. Bevevino. 2,473,410, June 14.
Device for thermal receivers, Protective. A. A. C. Bayle. 2,472,879, June 14.
Device for transmitting and receiving compressional waves. H. Benioff. 2,473,354, June 14.
Device on which to form miniature ladders, etc. F. Spano. 2,473,398, June 14.
Dial mounting. E. B. Moss. 2,473,291, June 14.
Die casting machine. J. Galliano. 2,473,366, June 14.
Dielectric materials, Testing. M. A. Elliott. 2,472,814, June 14.
Digging tooth for excavating buckets. R. E. George. 2,472,892, June 14.
Diol compounds and esters thereof. C. N. Zellner, and H. B. Granholm. 2,473,406, June 14.
Dioleön distillation. R. F. Howe. 2,473,203, June 14.
Direction finding device. K. Posthumus. 2,473,401, June 14.
Discharge device, Gaseous. P. W. Stutsman. 2,472,865, June 14.
Dish cleaning and garbage collecting machine. R. M. Carson. 2,473,007, June 14.
Dish, Nut. C. W. Heath. 2,473,026, June 14.
Disk, Hygroscopic. B. Cones. 2,473,276, June 14.
Disk supporting jig while treating the edge of the disk. C. E. Adams. 2,473,407, June 14.
Dispenser: *See*—
Lady's portable powder dispenser.
Dispensing container. M. I. Williamson. 2,472,871, June 14.
Dispensing machine, Butter. L. Herber. 2,473,057, June 14.
Document copying machine, Flow camera. F. C. Yohn. 2,472,931, June 14.
Dolly, Truck. T. E. Leonard. 2,472,952, June 14.
Door and bridge, Elevator. E. E. Alexander. 2,473,125, June 14.
Door check device. R. L. Brown. 2,473,359, June 14.
Door locking device, Hand brake lever controlled. C. L. Miller. 2,472,915, June 14.
Drawbar, Swinging. E. G. Blunier. 2,473,357, June 14.
Drier: *See*—
Hair drier. Portable clothes drier.
Drilling machine. H. Goldberg. 2,472,967–8, June 14.
Drilling mud containing gelatinized starch and monoethanol ammonium 2-benzothiazyl sulfide. W. F. Rassell. 2,473,392, June 14.
Drive for gas turbine locomotives, Electric. A. F. Schwendner. 2,472,924, June 14.
Dye intermediates, Hydrophilic. D. W. Woodward. 2,473,403, June 14.
Dyes, Metallized tetrakisazo. W. Wehrli. 2,472,965, June 14.
Dynamoelectric machine. R. A. Fuller. 2,473,244, June 14.
Dynamoelectric machine. P. S. Potts. 2,473,259, June 14.
Dynamoelectric machine having laminated armature with teeth slotted to reduce eddy currents. W. L. Ringland. 2,473,302, June 14.
Egg separator stand. R. W. S. Boden. 2,473,411, June 14.
Electric motor. W. E. Bledsoe, Jr. 2,473,049, June 14.
Electric motor mounting. F. O. Laenberger. 2,473,105, June 14.
Electric switch. R. Bain. 2,473,088, June 14.
Electric switch. R. E. Smith. 2,473,263, June 14.
Electric traction motor. W. J. Bauroth. 2,473,130, June 14.
Electrical apparatus. J. Halpern. 2,473,426, June 14.
Electrical baking mold. M. E. Wood. 2,473,402, June 14.
Electrically conductive fabric. W. Watson. 2,473,183, June 14.
Electrode. R. Corteee. 2,473,413, June 14.
Electron discharge device of the magnetron type. P. L. Spencer. 2,473,399, June 14.
Electron tube. D. Drieschman, and R. Chamberlin. 2,472,942, June 14.
Electronic square wave signal generator. L. H. Johnston. 2,473,432, June 14.
Elevator control mechanism. G. D. Pettengill; T. F. Jarvis, and W. L. Fader. 2,472,959, June 14.
Elevator, Stair. H. E. Firestone. 2,472,943, June 14.
Engine: *See*—
Two-cycle engine.
Engine control, Free piston. R. Huber. 2,473,204, June 14.
Engine of the multiple piston type, Multiple cylinder. D. Adams. 2,473,268, June 14.
Esters of alpha-fluoromethyl acrylic acids. J. B. Dickey. 2,472,812, June 14.
Evaporator for therapeutic, sterilising, and insecticidal liquids. G. Szekely. 2,472,992, June 14.
Exothermic reactions, Carying out. H. V. Atwell. 2,473,129, June 14.
Extrusion apparatus. J. W. Van Riper. 2,473,230, June 14.
Fabric: *See*—
Electrically conductive fabric.
Fabricated articles, Making. J. Gregg. 2,473,024, June 14.
Fan and air-heating means, Combined electric. J. M. Amfero. 2,473,325, June 14.
Feed belt, Machine gun ammunition. W. A. Schaich. 2,472,861, June 14.
Ferrochromium. H. de W. Erasmus. 2,473,020, June 14.
Ferrochromium, Production of. H. de W. Erasmus. 2,473,019, June 14.
Ferrochromium, Production of low carbon. H. R. Spendelow, Jr., and H. D. Erasmus. 2,473,021, June 14.
Field apparatus for egg pasteurization, High-frequency electrostatic. W. M. Urbain, and P. Schauert. 2,473,041, June 14.
Filter: *See*—
Blood filter. Coffee filter.
Filter system, Low-pass. G. L. Fredendall. 2,472,798, June 14.
Fire extinguisher, Dry chemical. W. E. Snowden. 2,473,349, June 14.
Firing line catcher. J. D. Williams. 2,473,142, June 14.

Harness. E. T. Todd. 2,473,114, June 14.
Harvester, Cotton. J. J. Wallace. 2,473,315, June 14.
Headgear for pedestrians and workmen, Safety. C. W. Scott. 2,473,394, June 14.
Heat detecting system. J. Evans. 2,473,197, June 14.
Heat exchange system. R. E. Olson. 2,472,984, June 14.
Heat-treat furnace. C. Menzies. 2,473,381, June 14.
Heat-treating liquids, Method and apparatus for. J. O. Ziegler. 2,472,998, June 14.
Heater: *See*—
Unit type airplane heater.
Heater with constant heating rate control, Radio-frequency. F. G. Albin. 2,473,188, June 14.
Heating apparatus, High-frequency dielectric. E. T. Hsu. 2,473,251, June 14.
Heating unit, Electrical. D. P. Wilkes. 2,472,930, June 14.
Helical asymmetrical thread forms for fluid devices. J. E. Whitfield. 2,473,234, June 14.
Hitch, Tractor. J. C. Kass. 2,472,905, June 14.
Hoist, Plasterboard. A. F. Core. 2,472,887, June 14.
Holder: *See*—
Halftone screen holder.
Holder. R. O. Montero. 2,473,086, June 14.
Hop and leaf separator. A. E. Osmnd. 2,473,215, June 14.
Hops treatment. G. Segal. 2,473,395, June 14.
Hose clamp. D. M. Buffington. 2,473,092, June 14.
Hose coupling. J. A. Muller. 2,473,441, June 14.
Hydraulic jack. H. A. Thorndike. 2,472,867, June 14.
Hydrocarbon metallic halides, Preparing. R. V. Lindsey, Jr. 2,473,434, June 14.
Implement for winding and folding harvesting sheets. W. H. Born. 2,473,327, June 14.
Impregnating device, Log. H. Svensson. 2,473,480, June 14.
Indicator: *See*—
Chord indicator. Time-interval indicator.
Indicator for photographic enlargers, Focus and magnification. M. T. Kolesnikoff. 2,472,007, June 14.
Initiator, Delay electric. D. T. Zebree. 2,473,405, June 14.
Instrument of the string type, Musical. C. B. Page. 2,473,442, June 14.
Insulation means for electrical apparatus. J. M. England. 2,473,332, June 14.
Insulator and making the same, Commutator cone. E. M. Hausbeer. 2,473,248, June 14.
Interlocking device, Truck bolster. R. B. Cottrell. 2,473,012, June 14.
Ironing machine, Electric. F. T. Fuge. 2,472,891, June 14.
Island for well drilling. W. J. Travers, Jr. 2,472,869, June 14.
Jack: *See*—
Hydraulic jack.
Jacket, Mold. F. L. Madrigal. 2,473,160, June 14.
Joint: *See*—
Constant velocity universal joint. Ultra high frequency rotatable joint.
Joint construction, Wall panel. K. H. Miller. 2,472,981, June 14.
Key for use with locks in which the tumblers are movable parallel to the axis of the plug, Adjustable. C. J. Borda. 2,473,273, June 14.
Keyholder. I. Herriott. 2,473,428, June 14.
Keyless lock. H. Cordrey and W. J. Duvall. 2,473,052, June 14.
Kite plane device. M. E. Nissen. 2,473,213, June 14.
Knife assembly and stripper for meat tendering machines. A. H. Ahrndt. 2,472,800, June 14.
Knife, Rotary disk. A. H. Ahrndt and P. H. Meyer. 2,472,876, June 14.
Lacquer, Fungicidal. W. S. Osborne. 2,472,847, June 14.
Lady's portable powder dispenser. P. Wolfers. 2,472,574, June 14.
Lamp for endoscopic instruments. I. Sawa. 2,473,479, June 14.
Lamp standard, Telescoping. H. F. Reichenbach. 2,473,218, June 14.
Latch: *See*—
Bathroom locking latch.
Lathe, Tandem spindle. J. H. Schreiber. 2,473,306, June 14.
Lawn edger. H. W. Hearn. 2,472,972, June 14.
Lens structure for headlights and the like, Antiglare. J. H. Plant. 2,472,850, June 14.
Lifter: *See*—
Toilet seat lifter.
Light control, Automatic. W. D. Fleming. 2,472,815, June 14.
Lighter. H. B. Greene. 2,472,822, June 14.
Lighter, Dispensing cigarette. A. E. Hutchinson and G. G. Thomas. 2,472,835, June 14.
Lighter, Pipe. J. F. Head. 2,472,825, June 14.
Line dispensing container. C. E. Plouff. 2,473,072, June 14.
Link construction, Cuff. J. M. Oldak. 2,472,958, June 14.
Liquid control gear. C. G. Hebel and R. H. Wallace. 2,473,282, June 14.
Liquid phase chlorination. E. T. McBee and L. W. Devaney. 2,473,162, June 14.
Litter installation for vehicles. E. G. Dickinson and J. C. Parkin. 2,473,364, June 14.
Lock: *See*—
Keyless lock. Sliding door lock.
Overhead door lock.
Lock for closures. K. Miller. 2,473,065, June 14.
Lock for mailing galleys, Type. R. B. Orr. 2,473,214, June 14.
Locking device for telescopic connections. L. Thompson and D. T. Wilson. 2,473,351, June 14.
Loudspeaker support post, Outdoor theatre. O. M. Petersen. 2,473,173, June 14.
Lubricator: *See*—
Piston rod packing lubricator.
Lubrication system. O. D. H. Bentley. 2,472,802, June 14.
Machine construction, Dynamoelectric. F. M. Potter. 2,473,257, June 14.
Machine for applying bands to cigars. H. E. Brouns. 2,473,275, June 14.
Machine for applying rubber tire treads to carcasses. E. Miller. 2,473,067, June 14.
Machine for making circular form tools. G. R. Houghtaling. 2,472,975, June 14.
Machine for sorting record cards. E. A. Ford. 2,472,890, June 14.
Machine tool. F. H. Bogart. 2,473,133, June 14.
Machine tool. A. J. Conn and R. B. Stanley. 2,473,093, June 14.
Machine tool. N. P. Darash. 2,473,138, June 14.
Magnetic induction device. C. G. Smith. 2,473,477, June 14.
Maintenance of catalyst activity in hydrocarbon conversion processes. J. C. Munday and E. W. S. Nicholson. 2,472,844, June 14.
Marine mine. J. I. Thompson and D. E. Marlowe. 2,472,866, June 14.
Marking and cutting machine, Cloth. V. Sciancalepore. 2,473,451, June 14.
Mass spectrometry. H. W. Washburn. 2,472,870, June 14.
Material handling device. R. K. Mulse. 2,472,843, June 14.
Means to straighten shoe soles. H. E. Loungren. 2,473,490, June 14.
Measuring system and saturable reactor for use therein. C. W. Miller and N. B. Nichols. 2,472,980, June 14.
Mechanical movement. R. E. Paris. 2,472,919, June 14.
Mechanical skeleton. J. H. Gleeson. 2,472,819, June 14.
Mechanism for calculating machines, Tens carry. H. Gang. 2,473,422, June 14.
Mechanism for roving and spinning frames, Double condenser high draft. J. V. Weinberger. 2,472,929, June 14.
Metal article, Protected. F. G. Singleton and P. W. Jenkins. 2,472,903, June 14.
Metal contact surfaces, Pickling. E. R. Bowerman, Jr. 2,472,786, June 14.
Metering means for a bottle having a lock to ensure the tipping of the bottle to dispense. R. Wortman. 2,473,402, June 14.
Miniature golf game board. J. Cipyak. 2,473,277, June 14.
Minimizing the horizontally-traveling components of seismic waves, Method and apparatus for. C. G. Dahm. 2,473,409, June 14.
Mirror observation unit for smoke indicators, Adjustable. R. H. Wager. 2,473,231, June 14.
Mold: *See*—
Electrical baking mold.
Mold for lining bearings. W. H. Tobener, Jr., and C. V. Anderson. 2,473,483, June 14.
Molding clip. D. H. Waara. 2,473,400, June 14.
Motion-picture screen. A. W. Ramstad. 2,473,301, June 14.
Motion transmission mechanism. S. H. Cook. 2,473,362, June 14.

Motor: *See*—
Electric motor. Rotary aircraft atbodyd
Electric traction motor. motor.
Motor control apparatus, Electric. W. H. Wannamaker, Jr. 2,473,494, June 14.
Mount and shoulder rest, Combination. J. R. Bird. 2,472,804, June 14.
Mounting: *See*—
Bearing mounting. Electric motor mounting.
Dial mounting.
Mounting means for top charged electric furnaces, Adjustable roof. W. E. Moore. 2,472,954, June 14.
Moving apparatus, House. B. Adkins. 2,472,932, June 14.
Muffler, Baffle type. M. F. Lathers. 2,473,103, June 14.
Multiple switch. F. J. Maloney. 2,473,287, June 14.
Multiplier for ultra-high frequencies, Electron. C. C. Larson. 2,473,031, June 14.
Music stand. M. M. Garcia. 2,473,109, June 14.
Necktie rack. L. Kovacs. 2,473,029, June 14.
Needle for sewing braided rugs. A. F. Smylie. 2,472,990, June 14.
Needle, Larding and seasoning. A. S. Bettencourt. 2,473,191, June 14.
Needle, Phonograph. W. H. Hutter. 2,473,374, June 14.
Nozzle for jet-propelled aircraft, Steering. F. S. Kramer. 2,472,839, June 14.
Nozzle for supersonic wind tunnels, Flexible. J. O. Jackson. 2,472,940, June 14.
Nozzle, Mixing. R. M. Doull. 2,473,415, June 14.
Oar, Reversible. R. C. Moeller. 2,473,440, June 14.
Oils corrosive to copper, Treatment of. C. A. Cohen. 2,473,195, June 14.
Oils from fish material, Extracting. R. F. Shropshire. 2,473,453, June 14.
1-cyano-1,3-butadiene, Preparation of. P. H. Wise. 2,473,486, June 14.
Open-top refrigerated display case. N. Achs. 2,473,122, June 14.
Opener, Screw cap. W. F. Grant. 2,473,425, June 14.
Operating device, Hatch cover. C. R. Hamilton. 2,473,098, June 14.
Operation of systems by a unit cylinder, Selective. A. N. Milleter. 2,473,168, June 14.
Organic compounds, Separation of. C. C. King. 2,472,837, June 14.
Oscillator. F. F. Rieke. 2,473,448, June 14.
Overhead door lock. H. B. Clark. 2,472,791, June 14.
Overload device, Thermal. S. E. Vickers. 2,473,485, June 14.
Overload or fixed load clutch. C. B. Spase. 2,472,925, June 14.
Overload protection system. W. E. McCown. 2,473,344, June 14.
Papermaking machine. C. S. Adams. 2,473,269, June 14.
Papermaking machine, Cylinder mold. C. S. Adams. 2,473,270, June 14.
Passing of warp threads through reeds. H. Meier. 2,473,289, June 14.
Passivation of ferrous metals. E. A. Thurber. 2,473,456, June 14.
Pasting and cutting device, Wallpaper. O. J. Bolvin. 2,472,935, June 14.
Pencil with step-by-step lead feeding means, Mechanical. D. Jueles. 2,473,149, June 14.
Perforator, Mechanical. R. F. Mallina. 2,473,437, June 14.
Petroleum distillates, Transporting. L. V. Sorg. 2,473,455, June 14.
Petroleum oil, Treatment of crude. C. O. Hoover. 2,473,431, June 14.
Phase or frequency modulation. D. Weighton. 2,473,318, June 14.
Photographic images by color development, Production of. P. R. Mereckx. 2,473,166, June 14.
Photographing and developing apparatus, Automatic. R. W. Dart and S. Jenkins. 2,473,280, June 14.
Photographing and developing apparatus, Double exposure. G. N. Pifer. 2,473,174, June 14.
Photography, Color. R. D. Beasley. 2,473,131, June 14.
Photovision. A. B. Du Mont. 2,472,889, June 14.
Pillow, Abdominal. L. D. and H. B. Brose. 2,473,136, June 14.

Sliding door lock. W. H. Koeser. 2,473,285, June 14.
Slip, Lady's. E. H. Schwalbe. 2,473,393, June 14.
Slip-ring structure. H. T. Jensen. 2,473,147, June 14.
Smoking pipe cleaner. A. L. Bohm. 2,473,180, June 14.
Soap from hydrogenated vegetable oils, Production of. W. Lange and R. G. Folzenlogen. 2,473,154, June 14.
Socket, Fluorescent lamp. H. Y. Mageoch and A. J. Shaback. 2,472,977, June 14.
Solids from liquid suspensions, Separating. C. O. Hoover. 2,472,976, June 14.
Solutions of streptomycin and making same, Stable sterile aqueous. F. J. Kirchmeyer and I. R. Card. 2,473,339, June 14.
Spark advance mechanism, Automatic. W. Ostling. 2,473,170–1, June 14.
Spark plug. H. R. Webber. 2,473,317, June 14.
Sparking plug. C. M. Carington and G. W. Shoobert. 2,473,241, June 14.
Spectacle case. E. Nathan. 2,473,292, June 14.
Spray device. R. E. Meade, N. E. Taylor, and J. F. Crews. 2,473,035, June 14.
Sprayer, Aircraft. S. A. Monson. 2,473,212, June 14.
Spring group. R. B. Cottrell. 2,473,011, June 14.
Spring product and forming same. H. C. Keysor. 2,473,027 June 14.
Stabilizing evaporated milk. H. E. Ottling, L. H. Chrysler, and E. F. Almy. 2,473,493, June 14.
Stand: *See*—
Egg separator stand. Music stand.
Stapling apparatus. D. R. La Place. 2,473,253, June 14.
Starch paste, Preparing. J. P. Casey. 2,472,790, June 14.
Stop means for feed roll units. A. E. Winslow and E. Eppler. 2,472,966, June 14.
Stove, Portable outdoor cooking. A. V. Walker. 2,473,468, June 14.
Stretching device for the heel wire of ski ties. A. E. P. Kjellström. 2,472,906, June 14.
Striking the welding arc in automatic electric-arc welding machines. R. J. Schmerber. 2,472,923, June 14.
Structure for ice fishing, Collapsible. C. Scheibner. 2,473,076, June 14.
Structure for storage batteries, Filling and venting. L. E. Lighton. 2,472,852, June 14.
Support for electric conductors. A. H. and G. A. Stevens. 2,473,264, June 14.
Support for gas ranges, Utensil. E. A. Stevens. 2,473,478, June 14.
Support for phonographs, Multiple record. W. E. Rudolph. 2,472,960, June 14.
Support for phonographs, Multiple record. H. Walker. 2,472,964, June 14.
Support or garter, Hosiery. R. J. Steere. 2,473,113, June 14.
Suppository. G. Flintermann. 2,473,368, June 14.
Suppressor, Echo. C. Gillings and P. E. A. Cowley. 2,472,894, June 14.
Switch: *See*—
Condition responsive switch. Multiple switch.
Electric switch. Push-button switch.
Switch. R. S. Robbins and C. T. Cochran. 2,473,303, June 14.
Switch and sealed adjusting control, Thermostatic. V. G. Vaughan. 2,473,081, June 14.
Switch apparatus, Magnetic. H. Cooley. 2,473,468, June 14.
Switch device, Centrifugal. G. Levesque du Rostu. 2,473,343, June 14.
Switching system, Power supply. C. Chou. 2,473,194, June 14.
Syringe. R. Nalpantian. 2,473,068, June 14.
System for charging and discharging energy storage devices. H. Klemperer. 2,472,838, June 14.
System for controlling the pressure in the cabin of an aircraft or the like. W. M. Widgery. 2,473,117, June 14.
Table construction, Extension. R. Kamholtz. 2,472,903, June 14.
Table or the like, Collapsible. F. H. Shufiin. 2,472,982, June 14.
Tandem axle construction. W. F. Double and S. F. and R. Q. Armington. 2,472,813, June 14.
Target electrodes, Manufacturing. A. Rose. 2,473,220, June 14.
Telegraph system, Automatic multiplex-stage. H. D. Colman. 2,472,885, June 14.
Telegraph system with code conversion and error detection. H. V. Higgitt. 2,473,202, June 14.
Telescoping collapsible chair. F. J. Becker. 2,473,090, June 14.
Teletypewriter exchange system. K. W. Richards. 2,473,346, June 14.
Television system, Color. T. W. Chew. 2,473,276, June 14.
Tensiometer. R. S. Nelswander. 2,472,845, June 14.
Tester, Bridge-type hardness. D. F. Sklar. 2,473,179, June 14.
Tester, Knife sharpness. B. W. Vars. 2,472,994, June 14.
Tester, Shear tenderness. C. E. Kerr. 2,473,063, June 14.
Testing apparatus and control circuits therefor, Pressure. H. W. Hoffman and G. H. Helmer. 2,472,973, June 14.
Testing device for filamentary material. D. Taylor and E. R. Ward. 2,472,927, June 14.
Tethering post. M. Sullivan. 2,472,928, June 14.
Tetrahydro-1- hydroxy-2- and -3- naphthamidobensaldehydes and their acetals with lower alkanols and 1,2- and 1,3-alkanediols. E. L. Martin. 2,472,910, June 14.

Tetramethyl silicate, Preparation of. E. G. Rochow. 2,473,260, June 14.
Textiles with strong hydroxide and acrylonitrile, Treatment of cellulosic. J. W. Stallings. 2,473,308, June 14.
Therapy, Electric convulsive. W. T. Liberson. 2,473,378, June 14.
Thermocouple junction with radiation shield. A. I. Dahl. 2,472,808, June 14.
Thermometer. C. L. Wilder and H. A. Klumb. 2,472,996, June 14.
Thermosetting resins, Preparation of water-soluble. R. C. Hesselbart. 2,473,145, June 14.
3-alkylsulfonamido-pyridinium salts. M. F. Zienty. 2,473,121, June 14.
3,5-dihydroxy-4-dihydro-thiadiazine-1-dioxide and its preparation. H. A. Walter. 2,473,042, June 14.
Tilting salt bath furnace. G. H. S. Grene. 2,473,095, June 14.
Timeinterval indicator. R. W. Byerly. 2,473,487, June 14.
Timer, Electric. M. E. Bivens. 2,473,237, June 14.
Timing and control device. A. W. Gardes. 2,472,818, June 14.
Tire chain release device. M. B. Herbrick. 2,472,826–8, June 14.
Toilet seat lifter. R. B. Warner. 2,473,082, June 14.
Tongs, Paper and trash pickup. N. V. Hunt. 2,473,146, June 14.
Tool: *See*—
Box tool. Sanding and finishing tool.
Machine tool. Shaft-pulling tool.
Pneumatic drilling tool. Trepanning tool.
Tool for inserting fasteners in machine belting. B. Tebb. 2,473,228, June 14.
Tool for reaping asparagus and the like. C. Kreutzer. 2,473,152, June 14.
Tool for upsetting hollow rivets, Pneumatic. B. G. Carlson. 2,473,361, June 14.
Tooth, Reinforced plastic. S. Slavin. 2,473,396, June 14.
Torch, Gas-arc. E. F. Potter. 2,473,258, June 14.
Tow device, Ski. E. Puricelli. 2,473,300, June 14.
Toy car, Miniature animal. J. N. and S. M. O'Connor. 2,473,295–6, June 14.
Toy horse. L. M. J. Fouike. 2,472,797, June 14.
Toy machine gun. W. O. Blake. 2,473,272, June 14.
Transformer. P. Berger. 2,472,882, June 14.
Transformer. E. H. Freeman. 2,473,420, June 14.
Transmission line, Wide band high-frequency. M. W. Scheldorf. 2,473,282, June 14.
Transmission mechanism. C. J. Lucia and F. R. McFarland. 2,473,157, June 14.
Transmitter, Call. R. F. Mallina. 2,473,438, June 14.
Transplanter. G. P. Ruhl. 2,473,261, June 14.
Trap: *See*—
Automatic electric animal trap. Gas trap.
Traveling bag. C. P. Thompson. 2,473,079, June 14.
Tray, Ice. M. Siebigteroth. 2,473,178, June 14.
Tray, Soap. L. B. King. 2,473,376, June 14.
Treating a hydrocarbon mixture which is contaminated by small amounts of organic fluorine compounds. C. B. Linn. 2,472,908, June 14.
Treating sewage, Method and apparatus for. S. I. Zack. 2,473,323, June 14.
Tree, Whittle. J. Rickard. 2,473,447, June 14.
Trepanning tool. R. M. Starbuck, Jr. 2,473,077, June 14.
Triazine condensation products and making same, Water-soluble. E. Keller and R. Zweidler. 2,473,475, June 14.
Trichloroacetyl chloride, Production of. E. J. Hart and M. S. Matheson. 2,472,946, June 14.
Trisulfide of arsenic, Preparation of colloidal. F. F. Schwartz. 2,473,110, June 14.
Truck, Portable. J. Skipper, H. Marble, and E. Frisell. 2,472,980, June 14.
Truck, Quick wheel change railway car. C. J. W. Clasen. 2,473,010, June 14.
Tube: *See*—
Cathode-ray tube. Electron tube.
Tube having a fluid or solid cathode and a capacitative igniter, Discharge. N. Warmoltz. 2,473,232, June 14.
Tuner device for radio apparatus and the like, Semiautomatic. R. W. May. 2,472,979, June 14.
Tuning control system for signal seeking receivers. M. G. Nicholson, Jr. 2,472,957, June 14.
Turbine blade lashing. J. D. Conrad and W. H. Lloyd. 2,472,886, June 14.
Turning head, Multiple. L. Feraing. 2,473,367, June 14.
2-amino pyrimidines and 2-amino glyoxalines, Production of. W. F. Short and P. Oxley. 2,473,111, June 14.
Two-cycle engine. J. J. McCoy. 2,473,164, June 14.
Two-hand control. H. Mills. 2,473,167, June 14.
2,2'- (2-ethylhexanamido)diethyl di(2-ethylhexanoate). F. Johnston and W. H. Hensley. 2,472,901, June 14.
Ultra high frequency coupling. W. E. Bradley. 2,473,274, June 14.
Ultra high frequency rotatable joint. G. L. Ragan. 2,473,443, June 14.
Unit type airplane heater. F. O. Hess, L. F. Miller, and K. L. Dietrich, Jr. 2,473,372, June 14.
Unsaturated halogen-containing nitro compounds and their production. E. C. Kooijman and J. Overhoff. 2,473,341, June 14.
Utensil, Combination table. A. G. McNeill. 2,473,288, June 14.
Vacuum breaking and dump valve. D. M. Anderson. 2,472,933, June 14.
Vacuum cleaner. C. Miller. 2,473,066, June 14.
Valve: *See*—
Vacuum breaking and dump valve.
Valve. J. P. Strange and W. P. Yant. 2,473,078, June 14.
Valve actuating mechanism. C. R. Crane, II, and A. Mueller. 2,473,013, June 14.
Valve and coupling, Combined. A. T. Scheiwer. 2,473,223, June 14.
Valve assembly, Radiator. A. G. Joos. 2,473,148, June 14.
Valve construction. R. Lewton. 2,472,840, June 14.
Valve construction. S. A. Ochs. 2,472,841, June 14.
Valve means, Electrically controlled. E. A. Bockwell. 2,473,038, June 14.
Variable resistance unit. A. O. Beckman. 2,473,048, June 14.
Vehicle spring preloading device. C. R. Kilmer. 2,473,338, June 14.
Vending machine, Bottle. J. R. Donaldson and N. M. Hulse. 2,473,054, June 14.
Venetian blind bracket. H. Nelson. 2,473,293, June 14.
Venetian blind structure. H. Nelson. 2,473,294, June 14.
Ventilating and heating apparatus for vehicles. H. J. Findley. 2,473,281, June 14.
Vibrator mechanism, High-frequency. R. J. Aust. 2,473,353, June 14.
Vine cutter. L. and C. A. Rogers. 2,473,450, June 14.
Vinyl chloride resins plasticized with diester-amides. F. Johnston and W. H. Hensley. 2,472,900, June 14.
Voltage multiplying circuit. S. Darlington. 2,473,414, June 14.
Vortical current separator. B. S. Hughes. 2,473,488, June 14.
Wattmeter, Microwave. H. E. Webber. 2,473,495, June 14.
Waving hair, Method of and apparatus for. A. E. Bronson and L. S. Speth. 2,473,135, June 14.
Waxing and polishing device, Floor. J. Gordon. 2,472,895, June 14.
Wedge, Optical light. T. W. Sukumlyn. 2,472,991, June 14.
Weeder. R. W. Doeg. 2,472,941, June 14.
Welding apparatus. F. C. Beyer and C. E. Jackson. 2,472,803, June 14.
Winding arrangement in alternating current machines. S. Gynt. 2,473,144, June 14.
Window construction. E. Peremi and H. Weimann. 2,473,298, June 14.
Wire stringing device, Paper machine. L. Hornbostel. 2,473,100, June 14.
Wire supporting device. J. B. Cook and L. L. Jugle. 2,473,363, June 14.
Wire system, Ground. W. R. Koch. 2,473,377, June 14.
Xylyl trichlorothiolacetate. A. T. Hallowell. 2,472,897, June 14.

CLASSIFICATION OF PATENTS

ISSUED JUNE 14, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1— 49: 2,473,253
49.4: 2,473,228
2— 19: 2,473,025

Designs	32	No. 154,194	to No. 154,225,	inclusive
Total	1,314			

Patents expiring: Patent Numbers 1,863,554 to 1,864,511, inclusive, issued June 21, 1932, expire June 21, 1949

Condition of Applications Under Examination at Close of Business May 31, 1949

Total number of patent applications awaiting action, 147,016. Date of oldest new application, June 25, 1947; date of oldest amended application, Dec. 5, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	4-20-48	7-28-47	2686
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	3-9-48	5-7-47	2694
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	11-3-48	11-3-48	910
4. BISHOP, WALTER C., Power Driven Conveyors; Hoists; Handling Apparatus; Excavating; Fire Escapes; Ladders; Scaffolds; Mining, Quarrying, and Ice Harvesting.	12-5-47	7-10-47	3286
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	6-11-48	9-26-47	1428
6. SURLE, H., Carbon Chemistry (part)	7-10-48	6-14-48	1888
7. HANLIN, GEORGE, Optics; Photographic Apparatus	8-30-48	6-14-48	1432
8. LEWIS, E. C., Beds; Chairs, Seats; Racks, Cabinets; Miscellaneous Furniture	8-6-47	6-4-47	4026
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	3-10-48	7-10-47	2055
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	8-13-48	6-10-48	1895
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Cutlery, Leather Manufactures; Nailing and Stapling.	6-14-48	10-6-47	1906
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	8-3-48	8-16-47	1900
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	8-15-47	9-10-47	2079
14. BLUM, A., (Acting), Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	8-30-48	8-13-48	1236
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	9-8-48	1-6-48	1702
16. LOVEWELL, N. N., Television; Telephony	9-7-48	2-4-48	1530
17. LEIGHEY, R. A., (acting), Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	12-9-47	1-4-47	2304
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal Combustion Engines.	4-24-48	10-7-47	2410
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	9-4-48	1-20-48	1664
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	4-1-48	8-28-47	1978
21. MADER, R. C., Textiles	4-10-48	8-16-48	1348
22. MARLAND, M. L., (Acting), Aeronautics; Firearms; Ordnance; Ammunition and Explosive Devices (part)	3-26-48	9-5-47	1488
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	6-10-48	7-15-47	1112
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	6-1-48	5-8-48	2312
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	6-28-48	12-9-47	1628
26. YOUNG, R. R., Electricity—Generation, Motive Power, Transmission to Vehicles; Elevators	8-20-48	1-20-48	1055
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Brush, Broom and Mop Making.	1-2-48	7-9-47	3206
28. BRAUNER, R. H., Internal-Combustion Engines (part); Cylinders; Pistons; Spring, Weight and Horse-power Motors; Dumping Vehicles, Wheel Substitutes; Vehicle Fenders; Hand and Hoist Line Implements; Chutes, Skids, Guides, Ways; Fluid Current Conveyors; Pneumatic Dispatch; Store Service.	4-20-48	7-14-47	1797
29. HABECKER, LEON B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools.	9-18-47	10-6-47	3196
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating; Heating Systems; Heat Exchange (part); Illuminating Burners.	12-1-48	12-2-48	607
31. BOETTCHER, A. M., (Acting), Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	10-6-48	10-6-48	1950
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating	12-13-47	9-15-47	1315
33. ROE, W. R., (Acting), Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	9-9-47	9-5-47	3004
34. SAPERSTEIN, S., Railways; Track Sanders; Signals and Indicators	6-4-48	2-14-48	1266
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	2-26-48	3-5-47	3006
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	5-7-47	6-5-47	1996
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	8-7-48	2-12-48	1308
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	6-16-48	4-23-48	1674
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	8-17-48	8-17-47	3038
40. DRUMMOND, E. J., Receptacles (part); Packages	8-2-48	9-8-47	2208
41. GURLEY, R. B., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	7-1-48	4-16-47	2216
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	10-21-48	10-15-48	932
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	8-31-48	8-26-48	1150
44. HARVEY, L. P., Refrigeration	2-9-48	7-11-47	930
45. DOUGLAS, R. A., (Acting), Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles, Railway Wheels and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Animal Draft Appliances.	6-1-48	9-15-47	2482
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	3-16-48	6-7-47	1890

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 147,016. Date of oldest new application, June 25, 1947; date of oldest amended application, Dec. 5, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	8-31-48	3-15-48	1973
48. BERSTEIN, S., Electricity, General Applications; Conversion Systems; Electric Igniters	9-1-48	11-24-47	1469
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Textiles, Ironing or Smoothing; Wells; Earth Boring	1-14-48	9-4-47	2961
50. LEVIN, SAMUEL, Synthetic Resins	10-16-48	7-2-48	1998
51. FRIEDMAN, M. H., Radiant Energy (part. e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications	9-4-48	7-1-48	1455
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits	5-26-48	8-9-47	3664
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Closures, Partitions and Panels, Flexible and Portable; Harness; Whip Apparatus	4-26-48	8-12-47	2134

Des. 147,961, D. M. Desiderio, Balancing toy, filed May 11, 1949, D. C., S. D. N. Y., Doc. 50/165, *D. M. Desiderio* v. *Lindes Corp.*

Des. 148,217. (See 2,280,479.)

Vol. 623 • No. 3 Tuesday, June 21, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

Des. 149,037, G. Backer, Woven plastic fabric, D. C., S. D. N. Y., Doc. 46/253, *Newcastle Fabrics Corp.* v. *Wendell Plastic Fabric Corp.* Consent judgment, sustaining patent, adjudging infringement, and granting injunction Mar. 8, 1949.

Des. 149,600, N. Wind, Coin-operated radio receiver, D. C., S. D. N. Y., Doc. 47/731, *Hotel Radio Corp.* v. *Nobell Mfg. Co., Inc.* Consent judgment holding patent valid and infringed, and granting injunction Jan. 27, 1949.

Des. 150,360, R. R. Hutcheson, Casing for heater fan unit, D. C., S. D. N. Y., Doc. 47/605, *E. A. Laboratories, Inc.* v. *Warren-Connolly Co., Inc.* Order of dismissal Jan. 20, 1949.

Des. 152,990, R. N. Leonard, Adjustable antenna, filed May 11, 1949, D. C., E. D. Pa., Doc. 9667, *The Radion Co.* v. *Snyder Mfg. Co.*

NOTICES

Disclaimers

2,163,827.—*John H. Thornbery*, Milwaukee, Wis. THERMOELECTRIC SAFETY SWITCH AND THE LIKE. Patent dated Dec. 19, 1939. Disclaimer filed May 26, 1949, by the assignee, *Milwaukee Gas Specialty Company*, the inventor assenting.

Hereby enters this disclaimer to claims 12 and 13 of said patent.

2,280,495.—*Eugene F. Martinet*, Cleveland, Ohio. SUCTION CLEANER AIR FLOW CONSTRUCTION. Patent dated Apr. 21, 1942. Disclaimer filed May 12, 1949, by the assignee, *Health-Mor, Inc.*

Hereby enters this disclaimer to claims 1, 2, 3, and 4 in said specification.

2,399,662.—*Robert H. Burk*, Wilmington, Del., and *Everett C. Hughes*, Cleveland Heights, Ohio. PROCESS OF ALKYLATING AROMATIC HYDROCARBONS. Patent dated May 7, 1946. Disclaimer filed May 27, 1949, by the assignee, *The Standard Oil Company*.

Hereby enters this disclaimer of claim 4, and so much of claims 8, 12, 13, and 14 as is in excess of a process of alkylating aromatic compounds by the reaction of an olefin having not less than three carbon atoms with an aromatic hydrocarbon under the conditions set forth in said claims.

2,416,095.—*Ernest V. Guldon*, Dayton, Ohio. ELECTRONIC DEVICE. Patent dated Feb. 18, 1947. Disclaimer filed May 23, 1949, by the assignee, *The National Cash Register Company*, and by the inventor.

Hereby enter this disclaimer to claims 3, 4, 6, 7, 8, 9, 14, 17, 18, 19, 20, 24, and 25 of said patent.

2,417,067.—*Raoul A. Peralle*, Long Branch, N. J. TELEPHONE SUBSTATION CIRCUIT. Patent dated Mar. 11, 1947. Disclaimer filed May 4, 1949, by the inventor.

Hereby enters this disclaimer to claims 7 and 8 in said specification.

2,418,268.—*Dennis I. Lawson*, Cambridge, England. PULSE MODULATION SIGNALLING SYSTEM. Patent dated Apr. 1, 1947. Disclaimer filed May 16, 1949, by the assignee, *Pye Limited*.

Hereby enters this disclaimer to claims 1 and 9 in said patent.

Notice Regarding Payment of Fees

RULE 22. Fees and charges payable to the Patent Office are required to be paid in advance, that is, at the time of making application for any action by the Office for which a fee or charge is payable.

RULE 23. All payments of money required for Patent Office fees should be made in United States specie, Treasury notes, national bank notes, post office money orders or postal notes payable in Washington, D. C., or by certified checks. If sent in any other form, the Office may delay or cancel the credit until collection is made. Money orders and checks must be made payable to the Commissioner of Patents. Remittances from foreign countries must be payable and immediately negotiable in the United States for the full amount of the fee required. Money sent by mail to the Patent Office will be at the risk of the sender; letters containing money should be registered.

Use of Patented Drawing in a Reissue

The drawings upon which the original patent was issued may be used in reissue applications if no changes whatsoever are to be made in the drawings. In such cases, when the reissue application is filed, the applicant must submit a temporary drawing which may consist of a copy of the printed drawings of the patent or a photoprint of the original drawings securely mounted by pasting on sheets of drawing board of the size required for original drawing, or an order for the same.

Amendment Filed by an Attorney Not of Record

When an amendment is filed, signed by an attorney whose power is not of record, he, as well as the applicant, should be notified that the amendment cannot be entered.

When the Examiner's letter is of such a character that the six months for amendment runs from the date of a previous action, a statement to that effect should be made at the end of the letter and the date from which the six months runs given.

Printed Copies of Patents

A printed copy of the complete specification and drawings of any patent published herein can be obtained for twenty-five cents. (Designs ten cents.)

Applicant's Address

The requirement of Rule 31, that the post-office address of the applicant must be stated in the petition, means that the applicant must give the post-office address at which he customarily receives his mail.

The rule was made in order that the Office in necessary cases might correspond directly with the applicant and not through his attorney. The address of the attorney with instructions to send communications to the applicant in his care will not be accepted as a compliance with this rule.

Amendments to Amendments

RULE 124. When an amendatory clause is to be amended, it should be wholly rewritten and the original insertion canceled, so that no interlineations or deletions shall appear in the clause as finally presented. Matter canceled by amendment can be reinstated only by a subsequent amendment presenting the canceled matter as a new insertion.

Notice—Attorney's Address

Many letters are being returned to this Office for lack of street address. The attorney's full post-office address should be given in every power of attorney. The prompt delivery of communications will thereby be facilitated.

Trade-Mark Drawings

Substitute drawings will not be accepted in trade-mark applications unless required by the Examiner of Trade-Marks or correction of the original drawing would require that the mark be substantially entirely redrawn.

Communications to the Patent Office

A separate letter should in every case be written in relation to each distinct subject of inquiry or application. Assignments for record, final fees, and orders for copies or abstracts must be sent to the Office in separate letters. (See Rule 4.)

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Hotpoint Inc. offers the following 5 patents for non-exclusive license on reasonable terms to manufacture, use, and sell toasters. Applications for licenses may be addressed to the Secretary, Hotpoint Inc., 5600 West Taylor St., Chicago, Ill.

Pat. 2,005,685. ELECTRIC TOASTER. Patented June 18, 1935. Reg. No. 19,644.

Pat. 2,250,979. TIMING DEVICE. Patented July 29, 1941. Reg. No. 19,645.

Pat. 2,250,989. TIMING DEVICE. Patented July 29, 1941. Reg. No. 19,646.

Pat. 2,250,997. TIMING DEVICE. Patented July 29, 1941. Reg. No. 19,647.

Pat. 2,317,228. ELECTRIC HEATER. Patented Apr. 20, 1943. Reg. No. 19,648.

These 5 patents deal primarily with thermal timing devices for controlling the heating period of toasters or other appliances to insure uniform toasting of successive slices of bread or the like. This is accomplished by shortening later time intervals to compensate for increased temperatures which result from the continued use of the appliance. Pat. 2,250,997 is illustrative. The timing device comprises a bi-metallic thermostat bar used in association with a heater and switch mechanism, the latter of which is controlled by a pivoted latch. Group 36—21.

The General Electric Company offers the following 16 patents for non-exclusive license on reasonable terms to manufacture, use, and sell toasters. Applications for licenses may be addressed to the Manager, Patent Department, General Electric Company, 1 River Road, Schenectady, N. Y.

Pat. 2,084,881. ELECTRIC TOASTER. Patented June 22, 1937. Reg. No. 19,649.

Pat. 2,123,067. TOASTER. Patented July 5, 1938. Reg. No. 19,650.

Pat. 2,217,450. TOASTER. Patented Oct. 8, 1940. Reg. No. 19651.

Pat. 2,229,945. CRUMB TRAY FOR ELECTRIC TOASTERS. Patented Jan. 28, 1941. Reg. No. 19,652.

Pat. 2,241,103. TOASTER. Patented May 6, 1941. Reg. No. 19,653.

Pat. 2,255,508. ELECTRIC HEATER. Patented Sept. 9, 1941. Reg. No. 19,654.

Pat. 2,260,043. TOASTER. Patented Oct. 21, 1941. Reg. No. 19,655.

Pat. 2,262,498. COOKING APPARATUS. Patented Nov. 11, 1941. Reg. No. 19,656.

Pat. 2,269,162. TIMING DEVICE. Patented Jan. 6, 1942. Reg. No. 19,657.

Pat. 2,282,082. COOKING APPARATUS. Patented May 5, 1942. Reg. No. 19,658.

Pat. 2,326,589. APPLIANCE CONSTRUCTION. Patented Aug. 10, 1943. Reg. No. 19,659.

Pat. 2,330,644. TOASTER. Patented Sept. 28, 1943. Reg. No. 19,660.

Pat. 2,341,341. TOASTER. Patented Feb. 8, 1944. Reg. No. 19,661.

Pat. 2,344,842. TOASTER. Patented Mar. 21, 1944. Reg. No. 19,662.

Pat. 2,367,044. TOASTER. Patented Jan. 9, 1945. Reg. No. 19,663.

Pat. 2,414,325. AUTOMATIC TOASTER WITH VARIABLE DRAFT. Patented Jan. 14, 1947. Reg. No. 19,664.

These 16 patents describe electric toasters, generally of the so-called "pop-up" type. Separate parts such as timers, crumb trays, etc., are shown in some of the patents.

Pat. 2,461,571. POWER-DRIVEN HAMMER. Patented Feb. 15, 1949. Power driven hammer houses an electric motor for driving a counterweighted transverse spindle mounted inside housing. Spindle has an elongated eccentric portion on which an impact member (having a radial striking jaw), a spring-retaining ring, and an adjustable ring are all mounted in side-by-side relation. A pair of springs are housed in annular grooves in opposite ends of the spring retainer. As the jaw of the impact member initially strikes the shank of any suitable tool that has been inserted into chuck of hammer, the shank engages the jaw to arrest rotational movement of impact member as the jaw moves radially inwardly. While the jaw is moving radially inwardly, the springs are compressed so that when the jaw clears the end of the shank of tool the springs will rotate the impact member 360° to deliver a hammer blow to tool. (Owner) Girard C. Robinson, 1424 South 12th Ave., Maywood, Ill. Group 35—42. Reg. No. 19,665.

Pat. 2,461,022. VARIABLE POWER AND SPEED TRANSMISSION. Patented Feb. 8, 1949. Hydraulic transmission for motor vehicles and the like has all operating parts enclosed in a housing filled with hydraulic fluid. A driving shaft and a driven shaft in axial alignment extending outwardly through opposite ends of housing are provided with a pair of oppositely disposed beveled gears on their inner ends in permanent meshing engagement with a pair of beveled pinions on opposite ends of a cross shaft fixedly secured to inner end of driving shaft. The ring gear on the driving shaft is rotatably mounted thereon behind the cross shaft. A radially grooved fluid impact driven member is slidably and rotatably mounted on the driving shaft opposite a fixed radially finned wheel on this shaft. A sleeve of the impact member is slidably keyed to the hub of the ring gear on the driving shaft. The speed of the driven shaft may be varied by manually sliding the impact member toward and away from the finned wheel, or into interlocking engagement with the wheel. (Owner) H. C. Barnack, 122 Halladay Ave., Suffield, Conn. Groups 35—66; 38—31. Reg. No. 19,666.

Pat. 2,459,963. FISHING LINE CHANGER. Patented Jan. 25, 1949. Device for changing the line on a reel may be carried in tackle box and used by either right- or left-handed fishermen. Base carries two supports for a horizontal rotatable shaft, one support being stationary and the other detachably mounted on either side. Shaft has spaced drum flanges between the supports, a turning handle, and a free end tapered to hold a line-carrying spool. Two reel holders are mounted on base. The old line is wound from reel placed in one holder onto shaft between drum flanges, then a new line wound from spool held on free end of shaft onto reel in second holder. (Owner) M. Luther Roark, 501 South Roan St., Elizabethton, Tenn. Group 39—49. Reg. No. 19,667.

Pat. 2,460,835. ELECTRICAL INSULATION TESTING APPARATUS. Patented Feb. 8, 1949. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 G. G. 757.) Apparatus comprises a pair of multiple-position selector switches, each having a number of fixed contacts, and a single manually operated rotatable contact. The first switch includes a pinion and rack, and a rod that laterally engages a stepwise spiral cam of the second switch. In checking the insulation between transformer windings, for example, each of the windings is connected to a different fixed contact. A. C. voltage is introduced in a circuit in which a current-limiting resistor and an indicating device are interposed. In performing the check, one switch is adjusted to a reference position and the other rotated through all possible positions, the process continuing until the first switch has reached its extreme clockwise position. Any fault in the insulation is shown on the indicating device. (Owner) S. G. Luts, New York University, College of Engineering, Department of Electrical Engineering, University Heights, New York 53, N. Y. Group 36—13. Reg No. 19,668.

The following three patents are offered for sale or license by D. H. Killeffer, 168 Westchester Ave., Tuckahoe 7, N. Y.

Pat. 2,175,267. METHOD OF AND APPARATUS FOR REFRIGERATION. Patented Oct. 10, 1939. This patent describes a method of obtaining a magnified refrigeration effect from solid carbon dioxide by utilising it to cool the condenser of a reciprocating engine whose boiler is at the temperature of the refrigerator and using the power obtained from the engine to operate a supplementary refrigerating cycle cooling the same receptacle. Group 35—84. Reg. No. 19,669.

Pat. 2,328,462. REFRIGERATING SYSTEM. Patented Aug. 31, 1943. This patent continues the idea of Pat. 2,175,267 (Reg. No. 19,669) and describes a motor-compressor unit for performing the functions noted. Unit consists essentially of a column of liquid mercury in a cylinder of steel or other metal that is not wetted by the mercury. This arrangement gives self-sealing pistons that move with minimum friction in the cylinder. Group 35—84. Reg. No. 19,670.

Pat. 2,328,463. PRIME MOVER. Patented Aug. 31, 1943. This patent describes in detail the motor-compressor unit of Pat. 2,328,462 (Reg. No. 19,670). The essential points of the unit are a column of liquid mercury reciprocating in a cylinder of steel or other metal that is not wetted by the mercury, and an inlet-outlet valve combination actuated by floating on the mercury column. This unit is particularly adapted to use where power involved is small but where great differences between pressures in drive and driven ends of the system can be compensated by an intervening mercury column. Group 35—84. Reg. No. 19,671.

Pat. 2,458,733. POSITIVE BRAKE OR ARRESTING MEANS. Patented Jan. 11, 1949. This invention appertains to mechanism of simple construction, having for its prime object to arrest an intermittently motivated or rotated member furnishing positive limitation of movement of the rotated member, nullifying any residual momentum imparted to the rotated member by the motivating unit or prime mover. (Owner) George Reget, 120-09 227th St., St. Albans 11, N. Y. Group 35—69. Reg. No. 19,672.

Pat. 2,461,247. UTILITY COVER. Patented Feb. 8, 1949. A plastic, metal, or the like cover for jars, milk bottles, and other containers. A circular wall has a U-shaped skirt to straddle top of container. A removable disk with handle rests in recess in the wall. Disk has spaced slots to receive ribs on inner portion of skirt. Cams adjacent each slot are turned to engage or disengage the ribs and slots to tighten or release the disk. (Owner) George Wormull, 2 New York Ave., Bergenfield, N. J. Groups 33—73; 39—81; 40. Reg. No. 19,673.

Pat. 2,462,344. SUPPORT FOR SHIFTABLE CURTAIN RODS. Patented Feb. 22, 1949. Support for ends of shower curtain rods permits shifting rod from left to right to bring curtain in contact with rim of tub or shower wall or a distance therefrom for drying. Rectangular in shape, with an elongated groove (wider at center for insertion of end of rod) having a downwardly extending pocket at either end to support rod in shifted positions. Formed of ceramic, metal, plastic, or other suitable material to be mounted in the wall, replacing two tiles, or mounted over old tiles. (Owner) William G. Anderson, 1916 Hayes St., Hollywood, Fla. Groups 25—62; 32—61; 39—81. Reg. No. 19,674.

Pat. 2,461,769. TRESTLE. Patented Feb. 15, 1949. An extensible trestle used in erecting scaffolds for painters, carpenters, etc. A pair of A-shaped frames with spaced cross rounds have straight top cross bars connected by a channel bar. The channel bar has openings for the legs of an extension ladder. A pair of angle bars extend upwardly from the lowest cross round to receive the legs of the ladder. A trough-shaped keeper bar hinged to the top cross bar swings under a selected round to support the ladder at the desired height. May be used as permanent shop equipment or transported to other jobs. (Owners) John L. Posun, Le Roy Houghton, Howard C. Faust. Correspondence to John L. Posun, 303 Fairfield Ave., Johnstown, Pa. Groups 25—99; 33—81. Reg. No. 19,675.

Des. Pat. 108,131. DESIGN FOR A SCRAPING TOOL. Patented Jan. 25, 1938. Formerly manufactured by inventor under name Kurl-Edge. (Owner) Mrs. Ella B. Reid. Correspondence to David M. Marshall, Citizens Bank of Stuart Bldg., Stuart, Fla. Groups 33—52—59; 40. Reg. No. 19,676.

Pat. 2,442,745. MILK BOTTLE CLOSURE. Patented June 8, 1948. Milk bottle closure to be applied when regular pasteboard cap has been removed. Comprises a steel wire frame with vulcanized rubber composition disk which fits the milk bottle rabbet. A spring jaw partially encircles neck of bottle and has an upwardly extending loop forming a pivot for a cover-carrying lever. Handle portion of the lever is curved and downwardly inclined so that when the bottle is grasped the handle moves inwardly and the disk is lifted. The cover will automatically close from its own weight and snaps into the rabbet when given a slight downward push. (Owner) Frank M. Alexander, Box 1166, Winter Haven, Fla. Groups 30—31; 33—49—73; 40. Reg. No. 19,677.

Pat. 2,462,382. TURNBUCKLE. Patented Feb. 22, 1949. When this turnbuckle is adjusted to tension cables, etc., the tension may be relieved and then restored without disturbing the initial setting of the rotatable parts. It consists of two main interlockable members interconnected at their inner ends by a link to form a jointed structure. The structure may be retracted or extended by pivotally swinging the link in desired direction. When retracted, a sleeve may be slid over the members to hold them in this position. The link is provided with a trans-

verse tube having socketed ends to receive the end of a wrench to turn link. (Owner) Paul G. Gleason; 14658½ Victory Blvd., Van Nuys, Calif. Group 33—91. Reg. No. 19,678.

Pat. 2,455,011. THERMAL ALARM APPARATUS. Patented Nov. 30, 1948. Protective system for electric motors and other electrical equipment will intermittently actuate a bell or light when the temperature approaches a critical point so that operator may relieve part of the load. The system also serves to indicate a drop in temperature so that operator may re-apply the removed load. Thus, the motor may be continuously operated with the highest possible safe load. If the temperature reaches a critical point, a safety switch is automatically actuated to shut off the power. A pair of independent snap acting thermal elements for controlling the respective circuits are normally in engagement with the surfaces of heat exchange members. When the signal thermal element snaps to circuit closing position, it engages the surface of a cooling element so that it is rapidly cooled and returned to normal position. Modifications are set forth. (Owner) Clarence W. Ingels, 111—40 196th St., St. Albans 12, N. Y. Group 36—41. Reg. No. 19,679.

Pat. 2,460,944. BICYCLE HOLDING FIXTURE. Patented Feb. 8, 1949. Fixture for holding a bicycle during repair work comprises a swivel-mounted stand having a rotatable clamping vise. The jaws of the vise are made of hardwood shaped to accommodate and clamp the frame of the bicycle near the pedal crank bearing and at the juncture of the frame. The rotational mounting of the vise and the swiveled stand enable the bicycle to be moved to any position convenient for work. (Owner) G. E. Nighthart, 318 Valley St., Rear, Lewistown, Pa. Group 37—41. Reg. No. 19,680.

Pat. 2,460,945. BICYCLE SERVICING FIXTURE. Patented Feb. 8, 1949. This fixture may be used to hold a bicycle at a convenient height for display or repair. The fixture is composed of an articulated horisontal platform or runway having an intermediate section pivoted at its forward end to an extensible ramp portion and at the outer end to a drop leaf portion. The construction permits the stand to be pivotally inclined for unloading or loading purposes. The intermediate section is supported in an elevated position by an upright stand and by the ramp section which is lowered as a supporting leg. (Owner) G. E. Nighthart, 318 Valley St., Rear, Lewistown, Pa. Group 37—41. Reg. No. 19,681.

Pat. 2,445,897. ALTERNATING CURRENT SYSTEM. Patented July 27, 1948. Reg. No. 19,682.

Pat. 2,456,902. OSCILLATOR SYSTEM. Patented Dec. 21, 1948. Reg. No. 19,683.

These two patents relate to systems in which there are no electronic emission devices or moving parts for converting direct current into alternating current at any frequency or voltage. Generally stated, in the system shown in Pat. 2,445,897 direct current is converted to alternating current by applying a fluctuating voltage in opposite phase to each of a pair of direct current sources. The outputs of both direct current sources are combined as modified by the fluctuating voltage. Pat. 2,456,902 is an improvement and differs in that the circuit is employed to supply feed-back energy to maintain the system in a state of continuous oscillation, the load currents being taken from another transformer. (Owner) Philip J. Walsh, 239 Phelan Ave., San Francisco 12, Calif. Group 36—62—92.

The following four patents are offered for license by Locke Inc. Correspondence to Secretary, Locke Incorporated, P. O. Box 87, Baltimore 3, Md.

Pat. 1,894,292. STRAIN INSULATOR. Patented Jan. 17, 1933. A strain insulator having helical hoods or ribs for insuring draining off of water falling on the insulator during rain storms or condensing thereon in misty or foggy weather. Group 32—29—64. Reg. No. 19,684.

Pat. 1,949,562. CONDUCTOR RELEASING CLAMP. Patented Mar. 6, 1934. A transmission line conductor suspension clamp having a trigger release arrangement enabling the clamp to release its gripping action upon the conductor under excessive strain conditions. Groups 34—81; 35—69. Reg. No. 19,685.

Pat. 1,988,369. RADIO INTERFERENCEPROOF INSULATOR. Patented Jan. 15, 1935. Relates to an arrangement of the insulator pin cavity and the attached metal head of the insulator for achieving better electrical stress distribution and hence less corona. Group 32—29—64. Reg. No. 19,686.

Pat. 2,009,629. ARTICLE SPINNING DEVICE. Patented July 30, 1935. A device for spinning metal objects subsequent to their subjection to a galvanizing bath, the purpose being to throw off any surplus spelter or the like adhering to the object. Groups 34—39; 35—43. Reg. No. 19,687.

Pat. 2,433,275. CLOTHES CLOSET HANGER. Patented Dec. 23, 1947. Braced hanger rack fastened to closet wall or door supports a number of garment hangers in a minimum of space. A metal-rod rectangular frame with curved front and corners has straight back rod hinged horisontally to wall. A bracing rod attached to curved front of rack fits into an aperture of a metal backing strip dependent from center of hinged rod, supporting rack in horisontal position. When not in use, rack and rod hang parallel to wall. (Co-owner) H. V. Howard, 208½ South Summit St., Arkansas City, Kans. Groups 25—41; 33—59—83; 34—95—99. Reg. No. 19,688.

Pat. 2,461,255. ANIMAL POKE. Patented Feb. 8, 1949. A strap metal yoke of inverted U-shape adapted to pass about the neck of an animal has a hook at top of yoke and a hook at lower end of each leg of the yoke to engage fence wires and prevent animal from getting through fence. An arcuate neck pad is secured to underside of upper portion of yoke. Legs of yoke are held in vertical parallel position by a horisontal bolt, from which a plate is pivotally suspended, conforming at its top to shape of the underside of animal's neck. A longer hook member extends downward in front of and below the plate to engage lower fence wires. The poke is placed on the animal by removing the bolt so that one leg of yoke flexes outwardly, and adjusting the bolt in the proper set of holes furnished for adjustment to size of neck. (Owner) John H. Beard, Route 2, Ruston, La. Groups 33—59; 34—95; 35—22. Reg. No. 19,689.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 21, 1949

[VOL. 623. NO. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 6

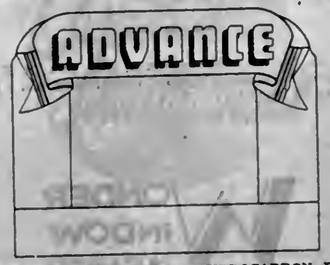
CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 510,491. DIAMOND ALKALI COMPANY, Cleveland, Ohio. Filed Oct. 9, 1946.

DIAMUD

FOR CHEMICAL PREPARATIONS TO BE USED WITH WELL DRILLING FLUIDS TO ENHANCE THE DRILLING CHARACTERISTICS OF WELL DRILLING MUDS, SAID PREPARATIONS BEING ADAPTED FOR MIXING WITH THE SOIL WHEN DRILLING.

Claims use since June 19, 1946.



Ser. No. 515,816. J. BRACH & CIE, SOCIETE D'EXPLOITATION DES PRODUITS BOTOT, Paris, France. Filed Jan. 16, 1947.

BRENNY

FOR PERFUMES, TOOTHPASTE.

Claims use since Dec. 6, 1929.

Ser. No. 517,684. ADVANCE SOLVENTS & CHEMICAL CORPORATION, New York, N. Y. Filed Feb. 18, 1947.

FOR SYNTHETIC LIQUID HYDROCARBON POLYMERS, MIXTURES OF POLYBUTENE POLYMERS AND HYDROCARBON WAXES, WETTING AND FOAMING AGENTS, POLYGLYCOL ESTERS SUITABLE FOR USE AS EMULSIFIERS, WETTING AGENTS, SOFTENERS AND PENETRATING AGENTS, CRESYLIC ACIDS, DIBENZYL ETHERS, ALKYLATED ARYL SULPHONATES, CARBOXYLIC ACIDS, SODIUM HYDROCARBON SULPHONATES, PLASTICIZERS, VINYL STABILIZERS, ALUMINUM SOAP OF NAPHTHENIC ACIDS, RUBBER TACKIFIERS.

Claims use since May 1, 1946.

CLASS 15

OILS AND GREASES

Ser. No. 513,694. SUN OIL COMPANY, Philadelphia, Pa. Filed Dec. 4, 1946.

SUNOCO

Applicant owns Registrations Nos. 306,496, 300,654, 377,516, 128,183, 153,018, 362,740, 344,149, 124,943, and 384,759.

FOR CLEAR PENETRATING OIL; DETERGENT TYPE MOTOR LUBRICATING OIL; DOOR HINGE LUBRICATING GREASE; WATER PUMP, ENGINE AND MOTOR LUBRICATING OILS AND GREASES; GASOLINE; MOTOR VEHICLE GEAR LUBRICATING OIL AND GREASE; HOUSEHOLD LUBRICATING OIL; LUBRICATING OIL FOR HYDRAULIC LIFTS; KEROSENE; LEAF SPRING LUBRICATING OIL AND GREASE; CUP GREASE FOR MOTOR VEHICLES; FLUSHING OIL FOR MOTOR VEHICLE ENGINES; RUST PREVENTIVE OILS; STEERING GEAR LUBRICATING OIL AND GREASE; TRANSMISSION LUBRICATING OIL AND GREASE; LUBRICATING OIL AND GREASE FOR TRACTOR ROLLERS; UNIVERSAL JOINT AND WHEEL BEARING GREASE; BODY AND CHASSIS GREASE FOR AUTOMOTIVE EQUIPMENT; UPPER CYLINDER LUBRICATING OIL; REFINED PETROLEUM WAX; TEXTILE FIBRE LUBRICATING OIL; CUTTING OILS AND MOTOR AND HEATING FUEL OILS.

Claims use since 1909.

Ser. No. 522,480. THE HANCOCK OIL COMPANY OF CALIFORNIA, Long Beach, Calif. Filed May 16, 1947.

FOR LUBRICATING OILS AND GREASES, GASOLINE, KEROSENE.

Claims use since Feb. 4, 1947.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 509,434. MIDLAND INDUSTRIAL FINISHES COMPANY, Waukegan, Ill. Filed Sept. 20, 1946.

MICO

FOR SYNTHETIC BAKING AND AIR DRYING ENAMELS FOR INDUSTRIAL USE, FURNITURE PAINTS AND LACQUERS, PAINT PRIMER AND RUBBER-BASED PAINT SOLD IN LIQUID FORM.
Claims use since Apr. 27, 1946.

Ser. No. 513,693. CLARA M. STINSON, doing business as Mae-Son-Ete Company, Cleveland Heights, Ohio. Filed Dec. 4, 1946.

MAE-SON-ETE

FOR COMBINED CLEANING AND POLISHING PREPARATIONS FOR USE ON FLOORS, WOODWORK, FURNITURE, LINOLEUM, TILE, ENAMEL, AND AUTOMOBILES.
Claims use since May 1931.

Ser. No. 515,606. THE BISSELL VARNISH COMPANY, Bridgeport, Conn. Filed Jan. 11, 1947.

BI-VAR-CO

FOR OIL PAINTS IN PASTE OR LIQUID FORM AND PAINT ENAMELS.
Claims use since 1930.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 499,926. AUGUST S. TORRES, Kinderhook, N. Y. Filed Apr. 9, 1946.

INFRA ROAST

The word "Roast" is disclaimed apart from the mark as shown.
FOR ELECTRIC COFFEE ROASTERS.
Claims use since Nov. 1, 1945.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 494,861. PACIFIC WIRE PRODUCTS CORPORATION, also doing business as Aircraft Containers Co., and also operating as Durabilt Manufacturing Company, Los Angeles, Calif. Filed Jan. 16, 1946.

WESTCOASTER

FOR PULL TOYS—NAMELY, TOY WAGONS.
Claims use since Nov. 1, 1945.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 503,629. BETHLEHEM SUPPLY COMPANY, Tulsa, Okla. Filed June 11, 1946.

HYDRODRIVE

FOR MECHANICAL HOISTS USED IN THE DRILLING AND SERVICING OF OIL WELLS.
Claims use since Nov. 20, 1945.

Ser. No. 505,456. MAX SUNSERI, New York, N. Y., assignor to Wonder Window Washer Mfg. Co. Filed July 11, 1946.

WONDER WINDOW WASHER

The words "Window Washer" are disclaimed apart from the mark.
FOR WINDOW WASHER CONSISTING OF A SPONGE, SQUEEGEE, HANDLE, AND U-SHAPED HANDLE ATTACHMENT ROD.
Claims use since Jan. 2, 1945.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 516,452. UNIVERSAL PICTURES COMPANY, INC., New York, N. Y. Filed Jan. 27, 1947.

Universal International

FOR FILMS FOR USE IN CONNECTION WITH SYNCHRONIZED APPARATUS FOR SIMULTANEOUSLY REPRODUCING COORDINATED LIGHT AND SOUND EFFECTS; FILMS WITH SOUND, WORDS, AND/OR MUSIC RECORDED THEREON; FILMS WITHOUT SOUND RECORDED THEREON ADAPTED FOR SYNCHRONIZATION WITH SEPARATE SOUND, WORDS, AND/OR MUSIC FILMS AND RECORDS; FILMS AND RECORDS WITH SOUND, WORDS AND/OR MUSIC RECORDED THEREON, ADAPTED FOR SYNCHRONIZATION WITH SEPARATE PICTURE FILMS; AND MOTION PICTURES.
Claims use since Nov. 20, 1946.

Ser. No. 516,453. UNIVERSAL PICTURES COMPANY, INC., New York, N. Y. Filed Jan. 27, 1947.

Universal International

FOR FILMS FOR USE IN CONNECTION WITH SYNCHRONIZED APPARATUS FOR SIMULTANEOUSLY REPRODUCING COORDINATED LIGHT AND SOUND EFFECTS; FILMS WITH SOUND, WORDS, AND/OR MUSIC RECORDED THEREON; FILMS WITHOUT SOUND RECORDED THEREON ADAPTED FOR SYNCHRONIZATION WITH SEPARATE SOUND, WORDS, AND/OR MUSIC FILMS AND RECORDS; FILMS AND RECORDS WITH SOUND, WORDS AND/OR MUSIC RECORDED THEREON, ADAPTED FOR SYNCHRONIZATION WITH SEPARATE PICTURE FILMS; AND MOTION PICTURES.
Claims use since Nov. 20, 1946.

CLASS 37

PAPER AND STATIONERY

Ser. No. 521,365. CHARLES B. SHER COMPANY INC., New York, N. Y. Filed Apr. 25, 1947.

GET 'SETCO'

The picture of the human figure is merely fanciful.
FOR WRAPPING PAPER, TISSUE PAPER, PAPER TOWELS, TOILET PAPER, WATERPROOF PAPER, PARCHMENT AND GLASSINE, WAX PAPER, CORRESPONDENCE ENVELOPES, BLOTTING PAPER, CORRUGATED PAPER, KRAFT PAPER, CARDBOARD, AND SHEETS OF ADHESIVE MATERIAL FOR THE PROTECTION OF MAPS AND THE LIKE.
Claims use since Jan. 3, 1946.

CLASS 45

SOFT DRINKS AND CARBONATED WATERS

Ser. No. 521,686. RODRIGUES FLAVORING SYRUPS, INC., Baltimore, Md. Filed May 1, 1947.

Mavis Cola MIX

The words "Cola" and "Mix" are disclaimed apart from the mark.
FOR SYRUPS, CONCENTRATES, AND EXTRACTS FOR NON-ALCOHOLIC MALTLESS BEVERAGES IN THE NATURE OF SOFT DRINKS.
Claims use since May 1, 1920.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 512,633. AMERICAN CHEWING PRODUCTS CORP., Newark, N. J. Filed Nov. 15, 1946.

AMERICAN MAID
HUBBA-HUBBA

Applicant is the owner of Registration Nos. 426,514 and 438,366. Applicant disclaims the words "American Maid" apart from the mark as shown.
FOR CHEWING GUM.
Claims use since Oct. 30, 1946.

Ser. No. 522,059. WILLIAM P. SHORT, Detroit, Mich. Filed May 8, 1947.

The word "Brand" is disclaimed.
FOR BIRD SEED.
Claims use since Mar. 20, 1947.

Ser. No. 525,084. I. C. A. INDUSTRIE CONSERVE ALIMENTARI, Soc. An., Rome, Italy. Filed June 28, 1947.

FOR CONCENTRATED TOMATO, TOMATO SAUCE, PEELED TOMATOES, CONCENTRATED GRAPES, PRESERVED FRENCH PEAS, GREEN PEAS AND ARTICHOKES SOLD AS CANNED PRODUCTS, AND RICE SOLD IN PACKAGES, INDIAN CORN, WHEAT, OATS, RYE AND BARLEY.
Claims use since March 1923.

ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.5.
As provided by section 31 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 2

RECEPTACLES

Ser. No. 528,660. TOKHEIM OIL TANK AND PUMP COMPANY, Fort Wayne, Ind. Filed July 15, 1947. Under section 2f of the act of 1946.

TOKHEIM

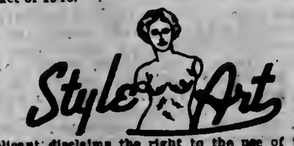
Applicant claims ownership of Registrations Nos. 178,253, 418,030, and 428,055.
FOR LIQUID FUEL TANKS USED FOR STORAGE PURPOSES.
Claims use since May 1902.

Ser. No. 547,631. GULF STATES PAPER CORPORATION, Tuscaloosa, Ala. Filed Jan. 21, 1948. Under section 2f of the act of 1946.

KHAKI KRAFT

The word "Kraft" is disclaimed apart from the mark.
Applicant claims ownership of Registration No. 275,883.
FOR PAPER BAGS.
Claims use since June 1, 1925.

CLASS 3



BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 506,356. WILLIAM BAL CORPORATION, Newark, N. J. Original filed July 26, 1946, under the act of 1905; amended to application under act of 1946, Feb. 24, 1949.

"BAL"
AEROFIBRE

FOR TRUNKS.
Claims use since June 27, 1946.

Ser. No. 522,208. MAX HOLSMAN, doing business as Style-Art Handbags, New York, N. Y. Original filed May 10, 1947, under the act of 1905; amended to application under act of 1946, Sept. 15, 1948. Under section 2f of the act of 1946.

Applicant disclaims the right to the use of the word "Style," apart from the mark as shown. The figure is a representation of the Venus de Milo.
FOR LADIES' HANDBAGS.
Claims use since Jan. 2, 1939.

Ser. No. 542,652. PRINCE GARDNER COMPANY, St. Louis, Mo. Filed Nov. 28, 1947. Under section 2f of the act of 1946.

PRINCE GARDNER

Consent to the registration of the name "Prince Gardner" is of record in the application file. Applicant claims ownership of Registration No. 359,533.
FOR LEATHER SUIT AND TRAVELING BAGS, FITTED OVER-NIGHT BAGS, HAND BAGS AND PURSES, POCKETBOOKS AND BILL FOLDS, BRIEF CASES, DOG COLLARS AND DOG HARNESSES, TRUNK STRAPS, LEATHER KEY CASES, AND LEATHER CARDCASES.
Claims use since Aug. 1, 1923.

Ser. No. 570,619. LANCA HANDBAGS CORPORATION, Batavia, N. Y. Filed Dec. 16, 1948.

"LANCA"

FOR WOMEN'S HANDBAGS.
Claims use since Sept. 12, 1948.

Ser. No. 570,683. ARISTOCRAT LEATHER PRODUCTS, INC., New York, N. Y. Filed Dec. 17, 1948.

CURVEX

FOR BILL FOLDS AND PURSES.
Claims use since Dec. 10, 1948.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 501,881. STEDFORD CHEMICAL CO., Fayetteville, N. Y. Original filed May 10, 1946, under the act of 1905; amended to application under act of 1946, Jan. 26, 1948.

FOAMKLEEN

FOR EMULSIFYING AND CLEANSING AGENT FOR USE WITH WATER FOR GENERAL CLEANING PURPOSES.
Claims use since Mar. 1, 1940.

Ser. No. 551,143. L. SONNEBORN SONS, INC., New York, N. Y. Filed Mar. 3, 1948.

HYDRONATE

BETHLEHEM

Applicant claims ownership of Registrations Nos. 145,570, 147,200, 151,430, 155,383, 171,606, 176,037, and 264,198.
FOR METAL WORKING PRESSES.
Claims use since April 1920.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 542,511. FRANK E. BATSCHELET, doing business as Fold-Away Products Company, Jersey Shore, Pa. Filed Nov. 28, 1947.

FOLD-AWAY

FOR LAUNDRY HANGERS IN THE FORM OF HORIZONTAL BARS SUSPENDED FROM THE CEILING BY RIGID FOLDING ARMS WITH CLOTHES LINES EXTENDING IN PARALLEL RELATION TO EACH OTHER BETWEEN THE BARS.
Claims use since 1938.

Ser. No. 553,714. THE KEY-TAG CHECKING SYSTEM COMPANY, Cleveland, Ohio. Filed Apr. 2, 1948.

COLLARIGHT

FOR SHIRT FINISHING APPLIANCES.
Claims use since Apr. 1, 1935.

Ser. No. 554,088. CLOVER FARM STORES CORPORATION, Cleveland, Ohio. Filed Apr. 8, 1948.

CLOVER FARM

FOR CLOTHESPINS.
Claims use since 1882.

CLASS 25

LOCKS AND SAFES

Ser. No. 548,077. HAROLD HOFFMAN, doing business as H. Hoffman Co., Chicago, Ill. Filed Jan. 27, 1948. Under section 2f of the act of 1946.

HOFFMAN

FOR KEYS, LOCKS, AND PARTS THEREOF INCLUDING LOCK TUMBLERS, CYLINDERS, SPRINGS, HANDLES, PICKS, CAMS, AND PAWLS.
Claims use since July 1927.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 509,133. BELL & GOSSETT COMPANY, Morton Grove, Ill. Original filed Sept. 16, 1946, under the act of 1905; amended to application under act of 1946, Aug. 15, 1947. Under section 2f of the act of 1946.

THERMO-FLO

FOR THERMOSTATICALLY CONTROLLED VALVES.
Claims use since Aug. 20, 1934.

Ser. No. 544,114. EDITH ROHRLICH, New York, N. Y. Filed Dec. 11, 1947.

"SEE-CURITY"

FOR EYE GLASS CASES.
Claims use since Dec. 9, 1947.

Ser. No. 544,505. BAILEY METER COMPANY, Cleveland, Ohio. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

BAILEY

Applicant claims ownership of Registration No. 334,388.
FOR MEASURING, CONTROLLING, AND REGULATING INSTRUMENTS, SYSTEMS, AND APPARATUS—NAMELY, RECORDERS, INDICATORS, INTEGRATORS,

REGULATORS AND CONTROLLERS OF COMBUSTION, OF PROCESSES AND OF FLUID FLOW AND CONDITIONS PERTINENT TO FLUIDS SUCH AS RATE OF FLOW, LEVEL, TEMPERATURE, AND PRESSURE; REMOTE RECORDING, INDICATING, INTEGRATING, CONTROLLING AND TELEMETERING INSTRUMENTS, ADJUSTABLE ORIFICES AND OTHER APPARATUS APPURTENANT TO SUCH INSTRUMENTS; AIR TRACER CONTOUR CONTROL AND DUPLICATING ATTACHMENTS; GAS ANALYZERS, INSTRUMENT AND CONTROL PANEL BOARDS, TIME CYCLE INSTRUMENTS AND CONTROLLERS, WEIGHING SCALES, AND ELECTRIC AND FLUID PRESSURE SELECTOR SWITCHES; PRESSURE TEMPERATURE LEVEL AND FLUID FLOW RESPONSIVE CONTROL VALVES; AND CHARTS PECULIAR TO THE OPERATION OF SAID INSTRUMENTS AND APPARATUS.
Claims use since January 1912.

Ser. No. 561,762. NATIONAL CARBON COMPANY, INC., New York, N. Y. Filed July 20, 1948.

EVEREADY

Applicant claims ownership of Registrations Nos. 137,045, 340,401, 340,911, 347,765, 348,463, 351,633, 377,580, 381,263, and 383,647.
FOR ANTI-FREEZE TESTERS.
Claims use since 1936.

Ser. No. 562,785. HERMAN B. LAYMON, doing business as World's Product Company, Spencer, Ind. Filed Aug. 4, 1948. Under section 2f of the act of 1946.

Laymon's

FOR SUN GLARE GOGGLES.
Claims use since Jan. 1, 1936.

Ser. No. 563,753. GIUSEPPE RATTI, Torino, Italy. Filed Aug. 19, 1948.

Filed June 17, 1947, Serial No. 524,365. Published Mar. 1, 1949. Class 39.

442,958. PROCESSED COLOR PHOTOGRAPHIC PRINTS. CHROMART LABORATORIES, Johnson City, N. Y.
Filed June 24, 1947, Serial No. 524,686. Published Mar. 8, 1949. Class 38.

442,959. LINOLEUM, OIL CLOTH AND FELT BASE FLOOR, WALL, SHELF, AND FURNITURE COVERING, SOLD BY THE YARD OR CUT INTO RUGS, MATS, OR TILES, AND COMPOSITION FLOOR TILES OF LINOLEUM OR OTHER MATERIAL. W. & J. SLOANE, New York, N. Y.
Filed June 27, 1947, Serial No. 525,038. Published Jan. 25, 1949. Class 20.

442,960. TEXTILE FABRICS IN THE PIECE MADE OF COTTON, ETC. W. & J. SLOANE, New York, N. Y.
Filed June 27, 1947, Serial No. 525,042. Published Mar. 1, 1949. Class 42.

442,961. REPRODUCERS—NAMELY, CABINETS CONTAINING ELECTRONIC AMPLIFIERS AND ONE OR MORE LOUD SPEAKERS. THE BALDWIN COMPANY, Cincinnati, Ohio.
Filed June 30, 1947, Serial No. 525,182. Published Mar. 15, 1949. Class 21.

442,962. OIL OF HOPS COMPRISING A DISTILLATION PRODUCT OF HOPS, ETC. E. CLEMENS HORST CO., San Francisco, Calif.
Filed July 1, 1947, Serial No. 525,329. Published Mar. 1, 1949. Class 48.

442,963. ELECTRICAL ILLUMINATING FIXTURE FOR THE INSTRUMENT PANEL OF AN AIRPLANE AND THE LIKE. FAIRCHILD CAMERA & INSTRUMENT CORPORATION, Jamaica, N. Y.
Filed July 2, 1947, Serial No. 525,578. Published Mar. 15, 1949. Class 21.

442,964. MEN'S AND BOYS' OUTER SHIRTS AND PAJAMAS. THE HALLMARK SHIRT CO., INC., New York, N. Y.
Filed July 3, 1947, Serial No. 525,827. Published Mar. 1, 1949. Class 39.

442,965. MEN'S AND BOYS' OUTER SHIRTS AND PAJAMAS. THE HALLMARK SHIRT CO., INC., New York, N. Y.
Filed July 3, 1947, Serial No. 525,831. Published Mar. 1, 1949. Class 39.

442,966. MEN'S OUTER SHIRTS, SPORT SHIRTS, NECKTIES, AND PAJAMAS. PHILLIPS-JONES CORPORATION, New York, N. Y.
Filed July 3, 1947, Serial No. 525,940. Published Mar. 1, 1949. Class 39.

442,967. MEN'S OUTER DRESS, WORK, AND SPORT SHIRTS, PAJAMAS, AND NECKTIES. PHILLIPS-JONES CORPORATION, New York, N. Y.
Filed July 3, 1947, Serial No. 525,942. Published Mar. 1, 1949. Class 39.

442,968. MEN'S COLLARS, SPORT SHIRTS, SPORT JACKETS, OUTER SHIRTS, NECKTIES, AND PAJAMAS. PHILLIPS-JONES CORPORATION, New York, N. Y.
Filed July 3, 1947, Serial No. 525,945. Published Feb. 22, 1949. Class 39.

ACT OF 1920

These registrations are not subject to opposition.

442,969. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LABORATORIOS ANNECY, S. A., Buenos Aires, Argentina. Filed Jan. 9, 1945, Serial No. 478,426.

ANNECY

FOR HAND LOTION, FACE LOTION, SHAVING LOTION, COLOGNE, BAY RUM, BRILLIANTINE, AND FACE CREAM.
Claims use since Oct. 30, 1943.

442,970. (CLASS 12. CONSTRUCTION MATERIALS.) NU-WALL MANUFACTURING COMPANY, Milwaukee, Wis. Filed June 30, 1945, Serial No. 485,263.

NU-WALL OVER OLD WALLS

NU-WALL

FOR WALL PLASTER, IN THE NATURE OF A DRY POWDER SOLD IN BAGS AND THEN MIXED WITH WATER AND APPLIED TO THE WALLS.
Claims use since Apr. 14, 1945.

442,971. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) HY SCHWARTZ, Los Angeles, Calif. Filed Aug. 20, 1945, Serial No. 487,338.

AQUA-VUE

FOR UNDER WATER GOGGLES WORN BY SWIMMERS.
Claims use since Aug. 1, 1945.

ACT OF 1946, PRINCIPAL REGISTER

511,113. CANNED MACKEREL. GOLDEN STATE PACKING CORPORATION, Long Beach, Calif., assignee of Robert O. Gruwell, Jr., doing business as Golden State Sea Food Co.
Original filed Apr. 26, 1944, under the act of 1905; amended to application under act of 1946, Oct. 21, 1947, Serial No. 469,676. Published Feb. 22, 1949. Class 46.

511,114. RADIO TRANSMITTERS, RADIO RECEIVERS, ELECTRICAL OSCILLATORS, ELECTRIC SIGNAL GENERATORS, ETC. HAZELTINE ELECTRONICS CORPORATION, New York and Little Neck, N. Y.
Original filed Oct. 5, 1945, under the act of 1905; amended to application under act of 1946, Aug. 6, 1947, Serial No. 489,462. Published Mar. 8, 1949. Class 21.

FOR GENERAL TONIC BUILDER INDICATED IN NUTRITIONAL DISTURBANCES, DURING CONVALESCENCE AND FOR ANEMIA, DEBILITY, CHLOROSIS, AND NEURASTHENIA PUT UP IN AMPULE AND COMPOUND FORMS.
Claims use since 1919.

Reg. No. 270,217. Registered Apr. 29, 1930. Gsoro Schicht A. G., Aussig, Czechoslovakia. Republished by Severoceske Tukove Zavody (Drive Jiri Schicht), Narodni Podnik, also named North Bohemian Fat Factories, formerly (Jiri Schicht) National Corporation, Usti nad Labem, Czechoslovakia, a corporation organized under the laws of Czechoslovakia.

FOR PERFUMES, FRAGRANT ESSENCES, FRAGRANT EXTRACTS, FRAGRANT OILS, COSMETICAL CREAMS, TOILET GLYCERINE, HAIR TONICS, HAIR WATERS, SCALP WATERS, TOOTH AND MOUTH WASHES, POMADES, FACE POWDERS, TALCUM POWDERS, TOOTH PASTE AND POWDERS, COLOGNE WATERS, BATH SALTS, COLD CREAMS, VANISHING CREAMS, FACE CREAMS, EYEBROW PENCILS, HAIR WASHES, HAND LOTIONS, NAIL POLISHES, NAIL PASTES, SHAMPOOS, TOILET WATERS AND TOILET VINEGARS, TOILET-POWDER COMPACTS, LIP STICKS, ROUGES, SKIN LOTIONS, SMELLING SALTS, HAIR DYES, HAIR SALVES, HAIR OILS, INCENSE, NAIL POWDERS, NAIL BLEACHES, DENTIFRICES, DEODORANTS, DISINFECTANTS, BLUING.
Claims use since 1921.

Reg. No. 278,057. Registered Dec. 2, 1930. DU-GAS FIRE EXTINGUISHER CORPORATION, New York, N. Y. Republished by Ansul Chemical Company, Marinette, Wis., a corporation of Wisconsin.

The word "Gas" is disclaimed apart from the mark as shown.
FOR FIRE-EXTINGUISHING CHEMICALS.
Claims use since Apr. 15, 1929.

Reg. No. 320,510. Registered Jan. 1, 1935. THE BARRETT COMPANY, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

FOR INORGANIC CHEMICALS—NAMELY, NITRATE OF SODA.
Claims use since June 25, 1934.

Reg. No. 323,972. Registered May 7, 1935. ALBERT L. CALDER COMPANY, INCORPORATED, Providence, R. I., a corporation of Rhode Island. Republished by registrant, present address Long Island City, N. Y.

CALDER'S DENTINE

FOR DENTIFRICE.
Claims use since 1850.

Reg. No. 334,691. Registered May 12, 1936. B. HELLER & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR CONCENTRATED LIQUID LAUNDRY BLUING.
Claims use since July 19, 1935.

Reg. No. 353,557. Registered Jan. 11, 1938. WALGREEN CO., doing business as Carrel, Chicago, Chicago, Ill. Republished by Carrel, Ltd., Chicago, Ill., a corporation of Illinois.

• TIDY •

FOR DEODORANT.
Claims use since September 1928.

Reg. No. 381,872. Registered Oct. 15, 1940. CHARLES B. HAGAMAN, doing business as Medi-Phragm Products, Denver, Colo. Republished by registrant, present address Arvada, Colo.

MEDI-PHRAGM

FOR ANTISEPTIC VAGINAL JELLY SOLD IN SEPARATE PACKAGES AND IN A COMBINATION PACKAGE CONTAINING A VAGINAL JELLY AND AN APPLICATOR.
Claims use since Feb. 1, 1938.

Reg. No. 386,263. Registered Apr. 1, 1941. B. HELLER & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

(Q.A.)

FOR CHEMICAL PREPARATION FOR USE IN CURING MEAT.
Claims use since Sept. 26, 1940.

Reg. No. 389,772. Registered Aug. 19, 1941. ENDO PRODUCTS INC., New York, N. Y., a corporation of New York. Republished by registrant, present address Richmond Hill, N. Y.

TRIKETOL

FOR PREPARATION CONSISTING OF A COMBINATION OF OXIDIZED UNCONJUGATED BILE ACIDS FOR THE TREATMENT OF DISEASES OF THE BILE.
Claims use since July 1, 1940.

Reg. No. 390,141. Registered Sept. 9, 1941. ORTHO PRODUCTS, INC., Linden, N. J. Republished by Ortho Pharmaceutical Corporation, Raritan, N. J., a corporation of New Jersey.

ORTHO

FOR VAGINAL CREAMS AND JELLIES.
Claims use since Mar. 21, 1941.

Reg. No. 391,245. Registered Oct. 28, 1941. PAUL DONALD ST. JOHN, Claremont, Calif. Republished by registrant.

SONG of the ISLANDS

FOR PERFUMES.
Claims use since July 1, 1940.

Reg. No. 395,892. Registered June 16, 1942. CHEOPHYL LABORATORIES, INC., Kansas City, Mo., a corporation of Delaware. Republished by registrant.

Graslets

FOR THERAPEUTIC VITAMIN PREPARATION USED AS A FOOD SUPPLEMENT FOR PETS.
Claims use since Sept. 26, 1941.

Reg. No. 397,420. Registered Sept. 8, 1942. CHEOPHYL LABORATORIES, INC., Kansas City, Mo., a corporation of Delaware. Republished by registrant.

GRAS

FOR THERAPEUTIC VITAMIN PREPARATION USED AS A FOOD SUPPLEMENT FOR PETS.
Claims use since June 11, 1941.

Reg. No. 399,980. Registered Feb. 9, 1943. WALGREEN CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

THURETS

FOR COATED LAXATIVE PELLETS.
Claims use since August 1937.

Reg. No. 401,449. Registered May 18, 1943. CHICAGO PHARMACAL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

SPASTOSED

FOR PREPARATION FOR USE IN THE TREATMENT OF SPASTIC CONDITIONS OF THE STOMACH AND BOWELS.
Claims use since Nov. 4, 1942.

Reg. No. 402,123. Registered June 29, 1943. VALENTINE LABORATORIES, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

VALEROL

FOR VITAMIN PREPARATIONS FOR INTERNAL USE FOR THE TREATMENT OF VITAMIN DEFICIENCY.
Claims use since Jan. 12, 1940.

Reg. No. 406,166. Registered Mar. 14, 1944. THE BOYD MANUFACTURING COMPANY, INC., Birmingham, Ala., a corporation of Alabama. Republished by registrant.

La Nola

FOR FACE CREAMS, TALCUM POWDERS, FACE-POWDERS, PERFUMES, AND TOILET WATERS.
Claims use since Mar. 24, 1916.

Reg. No. 410,689. Registered Dec. 12, 1944. NATIONAL TOILET COMPANY, doing business as Merrit Products Company, Paris, Tenn., a corporation of Tennessee. Republished by registrant.

Jan/16

FOR FACE POWDER AND PERFUME.
Claims use since Feb. 12, 1942.

Reg. No. 413,789. Registered May 15, 1945. ORTHO PRODUCTS, INC., Linden, N. J. Republished by Ortho Pharmaceutical Corporation, Raritan, N. J., a corporation of New Jersey.

Nutri-Sal

The syllable "Sal" is disclaimed apart from the mark as shown.
FOR THERAPEUTIC DOUCHE POWDER.
Claims use since Sept. 24, 1943.

Reg. No. 416,611. Registered Sept. 25, 1945. WALGREEN CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

XPOSE

FOR SUN TAN LIQUID.
Claims use since May 7, 1940.

Reg. No. 423,077. Registered Aug. 20, 1946. ORTHO PHARMACEUTICAL CORPORATION, Linden, N. J., a corporation of New Jersey. Republished by registrant, present address Raritan, N. J.

PRE-SERVISAL

FOR VAGINAL DOUCHE.
Claims use since Apr. 3, 1945.

Reg. No. 424,220. Registered Sept. 24, 1946. B. HELLER & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

TOES-UP

The drawing is lined for the color red.
FOR INSECTICIDE PREPARATION FOR REPELLING AND KILLING FLIES, MOSQUITOES, MOTHS, ROACHES, BEDBUGS, AND MANY OTHER HOUSEHOLD INSECTS.
Claims use since Feb. 1, 1946.

Reg. No. 426,837. Registered Dec. 24, 1946. CARREL, LTD., Chicago, Ill., a corporation of Illinois. Republished by registrant.

TAHINI

FOR COSMETIC PREPARATIONS—NAMELY, PERFUME AND COLOGNE.
Claims use since Dec. 3, 1937.

Reg. No. 432,349. Registered Sept. 2, 1947. NATIONAL TOILET COMPANY, doing business as Merrit Products Company, Paris, Tenn., a corporation of Tennessee. Republished by registrant.

MERITONE

FOR LIQUID HAIR DRESSING AND STRAIGHTENER, ANTISEPTIC MOUTH WASH AND GARGLE, HAIR TONIC, FOOT BALM, FOOT SOOTHE POWDER, COCOANUT OIL SHAMPOO JELLY, AFTER-SHAVING LOTION, DEODORANT, AND DISINFECTANT.
Claims use since June 29, 1944.

Reg. No. 436,570. Registered Feb. 10, 1948. THOMPSON-HAYWARD CHEMICAL COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

TRI-6 NO. 50W

FOR INSECTICIDES.
Claims use since Apr. 5, 1947.

Reg. No. 439,457. Registered June 29, 1948. ORTHO PHARMACEUTICAL CORPORATION, Linden, N. J., a corporation of New Jersey. Republished by registrant, present address Raritan, N. J.

Nidoxital

FOR PHARMACEUTICAL PREPARATION FOR THE TREATMENT OF NAUSEA AND VOMITING.
Claims use since Jan. 2, 1947.

Reg. No. 439,533. Registered July 27, 1948. MCCORMICK & CO., INCORPORATED, Baltimore, Md., a corporation of Maryland. Republished by registrant.

ABEJA

FOR INSECTICIDES—TO WIT, INSECTICIDAL SHAMPOO, FLEA AND TICK KILLER, WALL AND SCREEN SPRAY.
Claims use since Mar. 1, 1946.

Reg. No. 440,182. Registered Aug. 17, 1948. CHEMICALS, INC., San Francisco and Oakland, Calif., a corporation of California. Republished by registrant.

Vano

FOR LIQUID STARCH.
Claims use since Jan. 7, 1946.

CLASS 10
FERTILIZERS

Reg. No. 279,641. Registered Jan. 20, 1931. WILSON & TOOMER FERTILIZER CO., Jacksonville, Fla., a corporation of Florida. Republished by registrant.

IDEAL

FOR FERTILIZERS AND FERTILIZER MATERIALS.
Claims use since September 1921.

Reg. No. 319,510. Registered Nov. 27, 1934. WILSON & TOOMER FERTILIZER CO., Jacksonville, Fla., a corporation of Florida. Republished by registrant.

ALKO

FOR FERTILIZER AND FERTILIZER MATERIALS.
Claims use since July 15, 1932.

Reg. No. 219,582. Registered Nov. 27, 1934. THE BARRETT COMPANY, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

FOR CHEMICAL FERTILIZERS.
Claims use since June 25, 1934.

Reg. No. 367,134. Registered May 9, 1939. THE BARRETT COMPANY, New York, N. Y. Republished by Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York.

A-N-L

FOR FERTILIZER.
Claims use since Aug. 22, 1938.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 212,065. Registered Apr. 27, 1926. CADWALLADER-GIBSON CO., INC., Los Angeles, Calif. Republished by Mahogany Importing Company, Los Angeles, Calif., a corporation of California.

BAGAC

FOR LUMBER OF ALL KINDS USED FOR PANELS AND DOORS.
Claims use since 1918.

Reg. No. 212,079. Registered Apr. 27, 1926. CADWALLADER-GIBSON CO., INC., Los Angeles, Calif. Republished by Mahogany Importing Company, Los Angeles, Calif., a corporation of California.

ORION

FOR LUMBER OF ALL KINDS USED FOR PANELS AND DOORS.
Claims use since 1919.

Reg. No. 212,080. Registered Apr. 27, 1926. CADWALLADER-GIBSON CO., INC., Los Angeles, Calif. Republished by Mahogany Importing Company, Los Angeles, Calif., a corporation of California.

LAMAO

FOR LUMBER OF ALL KINDS USED FOR PANELS AND DOORS.
Claims use since 1915.

Reg. No. 215,861. Registered July 27, 1926. CADWALLADER-GIBSON CO., INC., Los Angeles, Calif. Republished by Mahogany Importing Company, Los Angeles, Calif., a corporation of California.

FOR LUMBER OF ALL KINDS, PARTICULARLY WOODS USED FOR PANELS AND DOORS.
Claims use since 1919.

Reg. No. 248,265. Registered Oct. 16, 1928. THE FLINTKOTE COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present address New York, N. Y.

KOOL-BLEND

FOR ASPHALTIC COMPOSITION ROOFING SHINGLES.
Claims use since on or about July 1, 1927.

Reg. No. 248,278. Registered Oct. 16, 1928. THE FLINTKOTE COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present address New York, N. Y.

KOLORDRIFT

FOR ASPHALTIC COMPOSITION ROOFING SHINGLES.
Claims use since on or about Jan. 1, 1927.

Reg. No. 250,528. Registered Dec. 11, 1928. THE FLINTKOTE COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present address New York, N. Y.

FLINTKOTE

PROTECTION

The word "Protection" is disclaimed apart from the mark as shown.
FOR COMPOSITION ROLL ROOFING, COMPOSITION SHINGLES AND STRIP SHINGLES, WATERPROOF ROOFING AND BUILDING PAPER.
Claims use since about Feb. 25, 1928.

Reg. No. 250,643. Registered Dec. 11, 1928. THE FLINTKOTE COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present address New York, N. Y.

Colorglo

FOR ASPHALTIC COMPOSITION ROOFING SHINGLES.
Claims use since on or about July 1, 1927.

Reg. No. 351,631. Registered Nov. 2, 1937. E. L. SMITH & Co., Barre, Vt. Republished by Rock of Ages Corporation, Barre, Vt., a corporation of Vermont.

FOR MACHINED OR POLISHED BLOCKS OR SLABS OF GRANITE.
Claims use since Mar. 22, 1937

Reg. No. 434,666. Registered Dec. 2, 1947. HIGGINS INDUSTRIES, INC., New Orleans, La., a corporation of Louisiana. Republished by registrant.

THERMO - NAMEL

FOR LIGHT GAUGE NON-CARBON STEEL PORCELAIN MATERIALS IN SHEETS FOR USE IN THE CONSTRUCTION OF PORTABLE HOUSES AND OTHER BUILDINGS.
Claims use since July 1943.

Reg. No. 438,254. Registered Apr. 13, 1948. THE FLINTKOTE COMPANY, New York, N. Y., a corporation of Massachusetts. Republished by registrant.

Flintseal

FOR COMPOUND FOR SEALING OF EXPANSION OR CONTRACTION JOINTS IN CONCRETE ROAD, STREET, AND AIRPORT PAVEMENTS.
Claims use since on or about Aug. 5, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 124,790. Registered Mar. 11, 1919. THE TOWNSEND COMPANY, New Brighton, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR SHIP-RIVETS.
Claims use since Feb. 5, 1918.

Reg. No. 317,539. Registered Sept. 25, 1934. THE CLEVELAND HEATER COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

SPEE-DEE CIRCULATOR

The word "Circulator" is disclaimed apart from the mark as shown.
FOR METAL PIPE FITTINGS.
Claims use since Mar. 10, 1933.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 489,964. Registered Aug. 3, 1948. THE PATROL VALVE COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

PATROL

The drawing is lined to represent the color blue in the outline borders of the letters.
FOR METALLIC FITTINGS AND ALLOYS INCLUDING ANODE RODS FOR PREVENTING CORROSION OF TANKS, LIQUID CONTAINERS, AND WATER HEATERS.
Claims use since Apr. 1, 1946.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 126,020. Registered Dec. 23, 1919. FRANK H. BROWN, Pottstown, Pa. Republished by Varcraft Works, Inc., Pottstown, Pa., a corporation of Pennsylvania.

Varcraft

FOR ENAMEL PAINTS, READY-MIXED PAINTS, COLORS IN OIL, COLORS IN JAPAN, VARNISHES, JAPANS, WOOD-STAINS, AND LIQUID SHELLACS.
Claims use since May 31, 1919.

Reg. No. 330,815. Registered Nov. 26, 1935. F. J. COOLEDGE & SONS, INC., Atlanta, Ga., a corporation of Georgia. Republished by registrant.

Perma-Flint

The word "Tint" is disclaimed apart from the mark as shown.
FOR CALCIMINE.
Claims use since on or about Dec. 1, 1923.

Reg. No. 330,816. Registered Nov. 26, 1935. F. J. COOLEDGE & SONS, INC., Atlanta, Ga., a corporation of Georgia. Republished by registrant.

PERMASPAR

The word "Spar" is disclaimed apart from the mark as shown.
FOR VARNISH, READY-MIXED PAINTS, AND PAINT ENAMELS, ALL CONTAINING AN OIL VEHICLE AND RESIN.
Claims use since on or about Apr. 3, 1935.

CLASS 19

VEHICLES

Reg. No. 72,436. Registered Jan. 26, 1909. OVERLAND AUTOMOBILE COMPANY, Indianapolis, Ind. Republished by Willys-Overland Motors, Inc., Toledo, Ohio, a corporation of Delaware.

Overland

FOR AUTOMOBILES.
Claims use since Aug. 1, 1903.

Reg. No. 384,400. Registered Jan. 21, 1941. HAROLD D. BRAINARD, Clinton, Conn. Republished by registrant.

ZIP

FOR SAILBOATS OF THE KEEL SLOOP AND CENTERBOARD TYPES.
Claims use since about May 11, 1940.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 244,615. Registered July 24, 1928. THE FEDERAL GAUGE CO., Chicago, Ill. Republished by The Mercoid Corporation, Chicago, Ill., a corporation of Delaware.

The lining on the drawing indicates the green color of the fabric covering of the wire in combination with the yellow color of a narrow ring of fabric surrounding one end of the conductor wire, as shown in the drawing, no claim being made to the representation of the goods.
FOR LEAD WIRES FOR ELECTRICAL CONNECTIONS TO MERCURY-TUBE SWITCHES.
Claims use since January 1922.

Reg. No. 245,654. Registered Aug. 21, 1928. THE FEDERAL GAUGE CO., Chicago, Ill. Republished by The Mercoid Corporation, Chicago, Ill., a corporation of Delaware.

RISERTHERM

FOR ELECTRIC CONTROLS FOR ELECTRIC SWITCHES, TEMPERATURE-OPERATED ELECTRIC SWITCHES, PRESSURE - OPERATED ELECTRIC SWITCHES, AND PARTS THEREOF.
Claims use since on or about Mar. 14, 1928.

Reg. No. 261,103. Registered Sept. 3, 1929. PREST-O-LITE STORAGE BATTERY CORPORATION, Speedway, Ind. Republished by Ford Motor Company, Dearborn, Mich., a corporation of Delaware.

MERCURY

FOR STORAGE BATTERIES.
Claims use since Dec. 12, 1928.

Reg. No. 286,142. Registered Aug. 18, 1931. CONTINENTAL TIRE CORPORATION, Chicago, Ill. Republished by Continental Products, Inc., Chicago, Ill., a corporation of Illinois.

BEST-BET

FOR STORAGE BATTERIES.
Claims use since Mar. 25, 1931.

Reg. No. 306,466. Registered Sept. 19, 1933. THE WADSWORTH ELECTRIC MFG. CO., INC., Covington, Ky., a corporation of Kentucky. Republished by registrant.

D-tach-O

FOR SHOW-CASE LIGHTING ASSEMBLIES AND PARTS THEREOF.
Claims use since May 11, 1932.

Reg. No. 342,559. Registered Jan. 19, 1937. PIONEER GEN-E-MOTOR CORPORATION, Chicago, Ill. Republished by Pioneer Gen-E-Motor Corporation, Chicago, Ill., a corporation of Delaware.

'GENE'

FOR DYNAMOTORS, GENERATORS, INVERTED ROTARY CONVERTERS, AND MOTOR GENERATORS.
Claims use since Oct. 14, 1932.

Reg. No. 353,098. Registered Dec. 28, 1937. PIONEER GEN-E-MOTOR CORPORATION, Chicago, Ill. Republished by Pioneer Gen-E-Motor Corporation, Chicago, Ill., a corporation of Delaware.

RED TOP

FOR GENERATORS, MOTORS, DYNAMOTORS, INVERTED ROTARY CONVERTERS, MOTOR GENERATORS, GAS ENGINE DRIVEN ELECTRIC GENERATING PLANTS AND WIND DRIVEN ELECTRIC GENERATING AND BATTERY CHARGING PLANTS.
Claims use since Jan. 27, 1937.

Reg. No. 358,949. Registered July 26, 1938. PIONEER GEN-E-MOTOR CORPORATION, Chicago, Ill. Republished by Pioneer Gen-E-Motor Corporation, Chicago, Ill., a corporation of Delaware.

PINCOR

FOR GENERATORS, ELECTRIC MOTORS, DYNAMOTORS, INVERTED ROTARY CONVERTERS, MOTOR GENERATORS, GAS ENGINE DRIVEN ELECTRIC GENERATING PLANTS, WIND DRIVEN ELECTRIC GENERATING PLANTS, BATTERY CHARGING PLANTS, AND ELECTRIC POWER PLANTS.
Claims use since Mar. 22, 1938.

Reg. No. 390,004. Registered Sept. 2, 1941. THE WADSWORTH ELECTRIC MFG. CO., INC., Covington, Ky., a corporation of Kentucky. Republished by registrant.

FOR ELECTRIC SWITCHES, ELECTRIC FUSE BOXES AND COMBINED SWITCH AND FUSE BLOCK STRUCTURES, ELECTRIC WIRING TROUGHS, ELECTRIC METER ENCLOSURES, PANEL BOARDS BOTH FUSIBLE AND CIRCUIT BREAKER TYPE, CHANNELS FOR ELECTRIC WIRING, ELECTRIC CIRCUIT BREAKERS, ELECTRIC TIME SWITCHES, ELECTRIC MOTOR STARTERS, AND ELECTRIC CONNECTORS AND TERMINALS.
Claims use since Jan. 20, 1941.

Reg. No. 404,942. Registered Dec. 28, 1943. SPRAGUE SPECIALTIES COMPANY, North Adams, Mass. Republished by Sprague Electric Company, North Adams, Mass, a corporation of Massachusetts.

CEROC

FOR ELECTRICAL CONDUCTORS.
Claims use since Aug. 9, 1943.

Reg. No. 410,450. Registered Nov. 28, 1944. PERMOFLUX CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

PERMOFLUX

The representation of the transducer is disclaimed apart from the mark as shown.
FOR PERMANENT MAGNET DYNAMIC TRANSDUCERS.
Claims use since on or about July 23, 1939.

Reg. No. 410,463. Registered Nov. 28, 1944. PERMOFLUX CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

PERMOFLUX

FOR PERMANENT MAGNET DYNAMIC TRANSDUCERS.
Claims use since on or about Oct. 16, 1943.

Reg. No. 411,610. Registered Jan. 23, 1945. PIONEER GEN-E-MOTOR CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

PINCOR Products

The word "Products" is disclaimed apart from the mark as shown.
FOR GENERATORS, ELECTRIC MOTORS, DYNAMOTORS, INVERTED ROTARY CONVERTERS, MOTOR GENERATORS, GAS ENGINE DRIVEN ELECTRIC GENERATING PLANTS, WIND DRIVEN ELECTRIC GENERATING AND BATTERY CHARGING PLANTS, BATTERY CHARGING PLANTS, AND ELECTRIC POWER PLANTS.
Claims use since November 1940.

Reg. No. 440,661. Registered Sept. 14, 1948. ERIE RESISTOR CORPORATION, Erie, Pa., a corporation of Pennsylvania. Republished by registrant.

GP

FOR CERAMIC CONDENSERS FOR THE RADIO FIELD.
Claims use since Nov. 2, 1946.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 206,046. Registered Nov. 24, 1925. UNITED STATES WHIP COMPANY, doing business as U. S. Line Company, Westfield, Mass., a corporation of Maine. Republished by registrant.

GOLDEN SPINNER

FOR FISHING LINES.
Claims use since Aug. 1, 1923.

Reg. No. 368,093. Registered June 6, 1939. WALGREEN CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR GOLF BALLS.
Claims use since Jan. 16, 1939.

Reg. No. 405,335. Registered Jan. 25, 1944. THE BRUNSWICK-BALKE COLLENDER COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

20TH. CENTURY

FOR BOWLING ALLEYS AND PARTS THEREOF, BOWLING PIN-SETTERS AND PARTS THEREOF, AND NEWEL POSTS FOR BOWLING BALL RACKS.
Claims use since July 1, 1940.

Reg. No. 439,854. Registered July 27, 1948. GENERAL MACHINE COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

RITE-ARC

FOR GOLF CLUBS OF THE CHARACTER KNOWN AS "PUTTERS."
Claims use since Aug. 28, 1946.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 227,947. Registered May 17, 1927. SPEEDER MACHINERY CORPORATION, Fairfield, Iowa. Republished by Link-Belt Speeder Corporation, Cedar Rapids, Iowa, a corporation of Illinois.

SPEEDER

FOR GASOLINE SHOVELS, CRANES, AND DRAG LINES.
Claims use since Jan. 1, 1926.

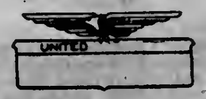
Reg. No. 279,372. Registered Jan. 13, 1931. DU-GAS FIRE EXTINGUISHER CORPORATION, New York, N. Y. Republished by Ansul Chemical Company, Marinette, Wis., a corporation of Wisconsin.

duGas

The word "Gas" is disclaimed apart from the mark as shown.
FOR PORTABLE HAND FIRE-EXTINGUISHING APPARATUS.
Claims use since Apr. 16, 1929.

Reg. No. 353,085. Registered Dec. 28, 1937. ED FRIEDRICH, INC., San Antonio, Tex., a corporation of Texas. Republished by registrant.

FLOATING AIR



FOR COMPRESSORS FOR FREEZING LIQUIDS, SUCH AS USED IN MACHINES FOR MAKING ICE, AND REFRIGERATING CONDENSING UNITS, I. E., MACHINES OPERATED BY MOTORS AND USED FOR CIRCULATING THE REFRIGERANT THROUGH COOLING COILS.
Claims use since June 15, 1936.

Reg. No. 362,745. Registered Nov. 29, 1938. CONE AUTOMATIC MACHINE COMPANY INC., Windsor, Vt., a corporation of Vermont. Republished by registrant.

CONOMATIC

FOR AUTOMATIC LATHES AND SCREW MACHINES.
Claims use since May 26, 1932.

Reg. No. 403,945. Registered Oct. 26, 1943. THE UNITED SPECIALTIES COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

FOR AIR CLEANERS FOR ENGINES, DUST SEPARATORS, AND CLASSIFIERS, AS USED IN THE SEPARATION OF SOLIDS FROM GASES.
Claims use since May 1935.

Reg. No. 418,507. Registered Jan. 1, 1946. PIONEER GEN-E-MOTOR CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

PINCOR Products

The word "Products" is disclaimed apart from the mark as shown.
FOR HAND AND ENGINE DRIVEN LAWN MOWERS AND PARTS THEREOF, GARDEN TRACTORS, SPRAYERS, AND PUMPS.
Claims use since August 1938.

Reg. No. 431,618. Registered July 29, 1947. IDEAL INDUSTRIES, INC., Sycamore, Ill., a corporation of Delaware. Republished by registrant.

Air-Horse

The word "Air" is disclaimed apart from the mark as shown.
FOR PNEUMATIC TOOLS—NAMELY, RIVETING HAMMERS.
Claims use since Jan. 28, 1946.

Reg. No. 433,653. Registered Oct. 21, 1947. MIDWESTERN TOOL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

BROCHIP

FOR MILLING CUTTERS.
Claims use since Feb. 3, 1945.

Reg. No. 439,662. Registered July 13, 1948. CARTER CARBURETOR CORPORATION, St. Louis, Mo., a corporation of Delaware. Republished by registrant.

The shading represents the colors red and black.
FOR INTERNAL COMBUSTION ENGINES AND AUTOMOTIVE ACCESSORIES AND PARTS—NAMELY, CARBURETORS, FUEL FILTERS, FUEL PUMPS, AND TOOLS AND PARTS THEREOF.
Claims use since April 1936.

Reg. No. 439,741. Registered July 20, 1948. PIONEER GEN-E-MOTOR CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

PINCOR

FOR GRANITE MONUMENTS AND MEMORIALS.
Claims use since Mar. 22, 1937.

REISSUES

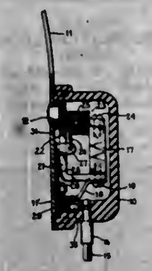
JUNE 21, 1949

23,124
PREPARATION OF N-DIMETHYL-ETHANOLAMINE

William F. Gresham, Alapocas, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Original No. 2,462,736, dated February 22, 1949, Serial No. 548,803, August 9, 1944. Application for reissue April 9, 1949, Serial No. 86,585

3 Claims. (Cl. 260—584)



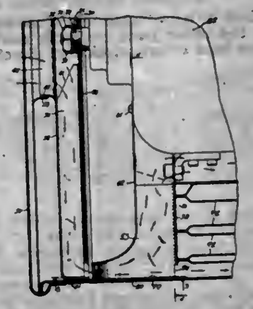
1. A process for the preparation of an N-dimethylethanolamine which comprises subjecting formaldehyde cyanhydrin to hydrogenation in the presence of formaldehyde and 4 to 20 parts by weight of methanol per part of formaldehyde cyanhydrin at a temperature between 15° and 150° C., a pressure between 200 and 700 atmospheres and in the presence of at least 25% by weight of a hydrogenation catalyst.

23,125
BONE CONDUCTION HEARING AID

Henry Koch, Huntingdon, Pa., assignor to Dictograph Products Company, Inc., New York, N. Y., a corporation of Delaware

Original No. 2,405,433, dated August 6, 1946, Serial No. 425,039, December 31, 1941. Application for reissue June 28, 1947, Serial No. 757,799

10 Claims. (Cl. 179—107)



1. In an audiphone receiver, the combination of an electromagnetic means adapted to respond to varying currents substantially throughout the audible frequency range, a casing having a face plate adapted to engage the body of the user, a contactor forming at least part of the body-engaging surface of said face plate and vibrated by said electromagnetic means relatively to said casing, relatively stiff spring means connecting said contactor and electromagnetic means, and resilient means connecting said electromagnetic means directly connected to said casing and supporting said electromagnetic means, spring means and contactor for bodily movement of the same as a unit relatively to said face plate in response to excessive pressures applied to said contactor, said resilient means having a stiffness less than that of said spring means.

23,126
AIR COMPRESSOR

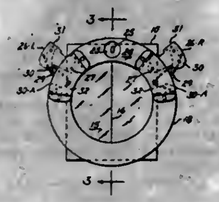
Calvin D. MacCracken, New Rochelle, N. Y., assignor, by direct and mesne assignments, to Jet-Heet, Inc., New York, N. Y., a corporation of New York

Original No. 2,462,518, dated February 22, 1949, Serial No. 716,365, December 14, 1946, which is a continuation of Serial No. 678,627, June 22, 1946. Application for reissue April 8, 1949, Serial No. 86,251

2 Claims. (Cl. 230—127)

2. In a centrifugal air compressor, in combination with a rotor delivering compressed air through an annular opening in one face near its periphery, a stator receiving compressed air from said rotor and comprising a cylindrical shell concentrically located with reference to the axis of the rotor and having a diameter which is about equal to the outside diameter of the rotor, a plurality of curved vanes located in cooperative relation to said annular opening in the rotor and radially arranged within said shell and with the outer edges of said vanes in contact with said shell, a shroud in contact with the inner edges of said vanes, and an annular plate having an outside diameter less than the diameter of said shell and located at a right angle to and concentric with the axis of the rotor and in cooperative relation to the edges of said vanes; whereby the direction and velocity of the compressed air delivered by said rotor to the stator are changed and the compressed air is directed into two paths, one of which is parallel to the axis of the rotor and extends through the annular opening between said shell and the outer edge of said plate, and the other of which is transverse to and toward said axis and extends between said shroud and plate.

23,127
SLIDE RULE CURSOR



Joseph J. Smidl, Portland, Oreg.

Original No. 2,418,910, dated April 15, 1947, Serial No. 564,196, November 20, 1944. Application for reissue December 30, 1948, Serial No. 70,421

5 Claims. (Cl. 235—84.3)

1. A cursor for slide rules comprising a frame adapted to be mounted slidably on a rule, said

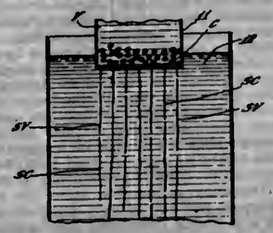
frame including a hollow ring, an annulus revolvably mounted in said ring, said frame having an opening therein through which a portion of said annulus may be observed, said annulus having lugs formed thereon, a pair of lever arms hinged to said frame, each of said lever arms having a pawl mounted thereon, one of said pawls engaging said lugs to drive same in a clockwise direction and the other pawl engaging said lugs to drive same in a counterclockwise direction, one lug at a time, said annulus being provided with characteristics thereon ranging through sequentially arranged positive values in one direction and negative values in the other direction.

23,123
PRODUCTION OF VINYL CHLORIDE
Joseph F. Weller, Lewiston, N. Y., assignor to Mathieson Chemical Corporation, a corporation of Virginia
No Drawing. Original No. 2,412,308, dated December 10, 1946, Serial No. 538,083, May 30, 1944. Application for reissue April 9, 1949, Serial No. 86,605
1 Claim. (Cl. 260—656)

In a process for producing vinyl chloride the combination of steps which comprises subjecting ethylene dichloride to pyrolysis to form vinyl chloride and hydrogen chloride, passing the products of pyrolysis over an activated adsorbent, adding acetylene to the adsorbent treated products of pyrolysis, and catalytically reacting the acetylene with the hydrogen chloride in the mixture.

PATENTS

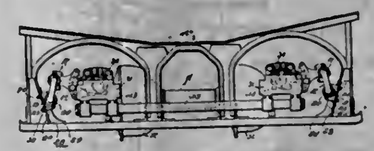
GRANTED JUNE 21, 1949



2,473,497
UNSATURATED HETEROCYCLIC ALCOHOL
Newman M. Bortnick, Philadelphia, Pa., assignor to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application November 4, 1947, Serial No. 784,983
3 Claims. (Cl. 260—333)

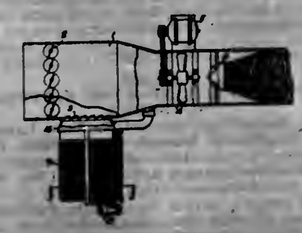
1. As a new chemical compound, 2,5-dimethyl-2-hydroxymethyl-2,3-dihydropyran.

2,473,498
SYNTHETIC RESINS DERIVED FROM ACRYLONITRILE ADDUCTS
James E. Dudley, Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 1, 1946, Serial No. 651,375
18 Claims. (Cl. 260—2)



18. A process which comprises heating together, as sole resin-forming ingredients, a polyamine having a hydrogen atom attached to an amino nitrogen atom, acrylonitrile, and an ammonocarbonic acid selected from the group consisting of cyanamide, dicyandiamide, guanidine, mono- and asymmetric di-hydrocarbon substituted guanidines, salts of guanidine and said substituted guanidines, biguanide, mono- and asymmetric di-hydrocarbon substituted biguanides, and guanyl urea to form a heat reaction product thereof.

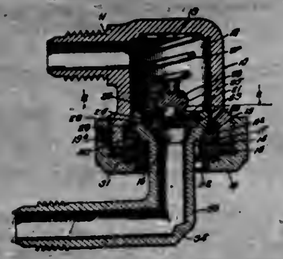
2,473,499
PRODUCTION OF SLIVERS OF ARTIFICIAL FIBERS
William G. Abbott, Jr., Milford, N. H.
Application April 30, 1946, Serial No. 666,172
6 Claims. (Cl. 18—54)



1. Method of forming a sliver of artificial fiber which comprises forming a composite comprising a filament-forming material in a continuous phase and another filament-forming material in a dispersed phase, both of said materials being in a flowable condition and being immiscible with each other so that each retains its separate identity, continuously feeding said composite to a plurality of adjacent orifices adapted to extrude the plurality of filaments which together constitute a sliver, said materials being so disposed substantially uniformly throughout the composite, as to present bodies of each material to the individual orifices at frequent intervals, such bodies of each filament-forming material filling the orifice cross section to the temporary exclusion of the other filament-forming material, thereby forming pieces of filament of staple length to produce a sliver from the several orifices comprising overlapped and longitudinally staggered pieces of both filament-forming materials.

2,473,500
VEHICLE SPRING SUSPENSION
Dwight E. Austin and William B. Fageol, Kent, Ohio, assignors to Twin Coach Company, Kent, Ohio, a corporation of Delaware
Application March 23, 1944, Serial No. 527,777
6 Claims. (Cl. 267—21)

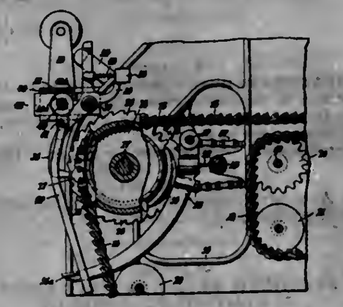
1. In a vehicle, suspension means therefor, including inner and outer, substantially concentric members, a bushing of elastic material arranged between and fixed to said members, a lever having pivotal connection at one end with the unsprung vehicle mass, means connecting said inner member with the sprung vehicle mass, and means for attaching said outer member to the other end of said lever, in one position of the latter, when the vehicle is unloaded, said attaching means being operative to place said bushing under normal negative torsional stress which progressively decreases to substantially zero stress position, in the pivotal movement of said lever, as the vehicle is loaded to substantially full capacity.



2,473,501
AIR FILTER
Agnew H. Bahnson, Jr., Winston-Salem, N. C.
Application July 9, 1945, Serial No. 603,761
7 Claims. (Cl. 183—66)

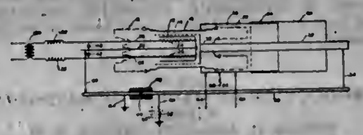
1. An air filter comprising a filtering cylindrical wall mounted for rotation on its longitudinal axis, means for rotating the cylinder, means for sucking air inwardly through said cylindrical wall and with-drawing air from the interior of the cylinder, means for cleaning the cylindrical wall comprising a first chamber positioned out-

side the cylinder, said first chamber having a slot embracing a portion of the cylindrical wall, means within said first chamber engaging said cylindrical wall through said slot for detaching accumulated filtered material from said surface; a second chamber positioned within said cylinder and having a slot embracing a portion of the inner surface of the cylindrical wall opposite said last named means; a stationary air filter connected to said second chamber and means for sucking air from said last named chamber through said stationary air filter.



2,473,502
JOINT
Francis N. Bard, Highland Park, Ill.
Application July 14, 1945, Serial No. 605,063
7 Claims. (Cl. 285—97.1)

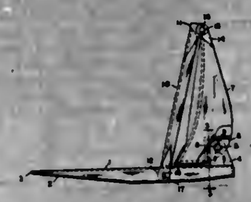
1. A flexible fluid conducting joint of the character described comprising a casing member having a cylindrical portion and a ball member received by said casing member and retained in movable sealing relationship therewith, including: a gasket of rigid material with a first surface having a sliding fit in said cylindrical portion of the casing and having a second surface contacting the outer surface of said ball member to oppose axial movement of the ball member due to fluid pressure in the joint, said gasket having a third surface extending closely adjacent the inner wall of the casing and making a corner therewith; a ring of deformable material pressed into the corner between the last mentioned surface and adjacent casing wall by fluid pressure in the joint for sealing the space between the casing and sliding gasket, said ring being on the side of said gasket open to fluid in the joint; and a removable support for said gasket.



2,473,503
PATTERN MECHANISM FOR KNITTING MACHINES
Emil J. Berger and Howard K. West, Lansdale, Pa., assignors to Dexdale Hosiery Mills, Lansdale, Pa., a corporation of Pennsylvania
Application January 3, 1948, Serial No. 469
5 Claims. (Cl. 66—154)

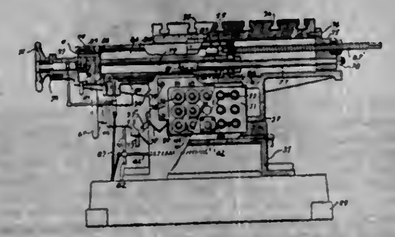
1. In pattern control mechanism for knitting machines, a timing chain; a sprocket drum about which the chain is trained; a group of control elements normally positioned in the paths of cam projections on the chain; a slide on which the control elements are supported for independent movement; a fixed guide on which the slide is restricted to movement toward and away from the chain; spring means tending to retract the slide and thereby bodily withdraw the control elements out of the range of the cam projections on the chain when it is desired to reset the latter to starting position; a shaft with a radial stop

projection for engaging the slide to keep it in normal position; and means on said shaft whereby it can be turned to permit retraction of the slide by the spring means.



2,473,504
CONCENTRIC LINE OSCILLATOR
Clarence A. Boddie, Belmar, N. J.
Application June 18, 1943, Serial No. 491,273
15 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

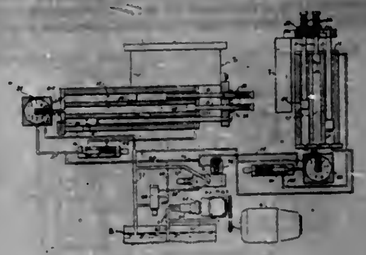
9. A very high frequency oscillator comprising, an oscillator tube having a concentric cylindrical anode, cathode and grid, and associated circuits, said tube having an appreciable cathode-to-grid capacitance, an anode pipe connected to the anode, the anode and anode pipe approximating a half wave length of the desired frequency, a grid pipe within the anode pipe connected to the grid and extending appreciably beyond the end of the anode pipe, said associated circuits including a grid-to-cathode circuit adapted to carry the grid-to-cathode charging current, said circuit including a longitudinal conductor external to the tube, a radio frequency connection from the cathode to a point near one end of said longitudinal conductor and a radio frequency connection from the aforesaid grid pipe to a point near the opposite end of said longitudinal conductor.



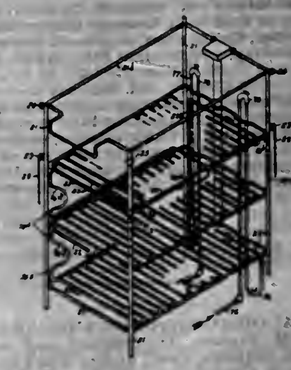
2,473,505
ATTACHABLE LIFTING ARM FOR BULLDOZER BLADES
Louis R. Brock, Hague, N. Y.
Application July 10, 1945, Serial No. 604,284
6 Claims. (Cl. 214—131)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A lifting fork for attachment to a bull dozer blade comprising a fork member, means on the rear end of said fork member for pivotal attachment to a bull dozer blade, an upwardly extending arm connected to said fork member, and

means on said arm adapted for connecting said arm to said blade.



2,473,506
POSITIONING DEVICE
Edward P. Bullard, III, Fairfield, Conn., assignor to The Bullard Company, a corporation of Connecticut
Application January 6, 1945, Serial No. 571,637
31 Claims. (Cl. 60—97)

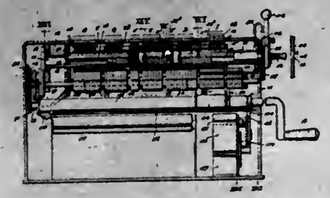


1. Apparatus comprising in combination, a member adapted to be moved along a plurality of paths at substantially right angles to each other; yieldable, oppositely-acting means adapted to move said member to, and hold it at any desired point along each of its paths of motion; adjustable means for accurately locating a plurality of points along said paths to any one at a time of which said member is adapted to be moved, and held; and means adapted to be moved non-proportionately relatively to the movement of said member and to a plurality of positions, one for each of said different points along said paths for causing said member to be moved to, and held at said different points along said paths of motion.

2,473,507
POSITIONING APPARATUS
Edward P. Bullard, III, Fairfield, Conn., assignor to The Bullard Company, a corporation of Connecticut
Application November 13, 1946, Serial No. 709,612
13 Claims. (Cl. 60—97)

11. In a hydraulic system, a plurality of floating pistons; a cylinder for each floating piston; a master piston connected to a movable member; separate adjustable means connected to said member adapted to cooperate with each of said floating pistons; a pump having a low-volume high-pressure portion and a large-volume low-pressure portion; common ducts for conveying both said high and low pressure fluids to the cylinders containing said pistons; a pre-settable valve for admitting only high pressure fluid to said master piston; and a distributor valve for selectively admitting said fluid to any of the cylinders containing said floating pistons while exhausting all others thereof.

2,473,508
FREEZER SHELF CONSTRUCTION
Douglas Collins, Salisbury, N. C.
Application August 16, 1945, Serial No. 610,961
7 Claims. (Cl. 62—126)



1. In a refrigerating device a vertically movable frame, a conduit for the passage of a fluid refrigerant, said conduit being carried by and movable with the frame and constituting a shelf for supporting and maintaining intimate thermal contact with the articles to be frozen, and means for guiding the vertical movement of said frame.

2,473,509
CASH REGISTER
Marcel Demeulenaere, Flushing, N. Y.
Original application April 18, 1935, Serial No. 17,119. Divided and this application March 4, 1942, Serial No. 433,898. In Belgium January 26, 1935
13 Claims. (Cl. 235—2)

1. In combination, a movable printing head carriage, printing discs rotatably mounted in said carriage, two sets of numerical printing characters arranged on each disc and progressing in numerical value in opposite directions circumferentially of said disc, the characters of one set being displaced with relation to the other set circumferentially of each disc, and separate im-

pression members for the sets of characters relatively displaced in accordance with the displacement of said characters, means effective in one position of the carriage to variably turn the discs in one direction to position the characters of one

set with respect to the related impression member, and means effective in another position of the carriage to variably turn the discs in the opposite direction to position the characters of the other set with respect to the related impression member.

2,473,510

STABILIZATION OF ORGANIC SUBSTANCES

George H. Denison, Jr., Oakland, and Paul C. Condit, Berkeley, Calif., assignors, by mesne assignments, to California Research Corporation, San Francisco, Calif., a corporation of Delaware

No Drawing. Application February 21, 1945, Serial No. 579,169
8 Claims. (Cl. 252—45)

1. A lubricant comprising a major proportion of a mineral lubricating oil which is susceptible to oxidation and a small amount, sufficient to inhibit oxidation of said lubricating oil, of a monoselenide containing not more than 14 carbon atoms and having in the molecule the structure

wherein both carbon atoms are aliphatic carbon atoms.

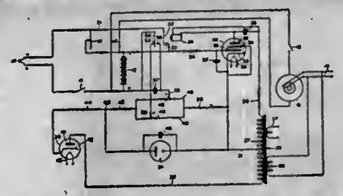
2,473,511

MINERAL OIL COMPOSITIONS AND THE LIKE

George H. Denison, Jr., Oakland, and Paul C. Condit, Berkeley, Calif., assignors to California Research Corporation, San Francisco, Calif., a corporation of Delaware

No Drawing. Application May 7, 1945, Serial No. 592,532
4 Claims. (Cl. 252—45)

1. A compounded lubricating oil, comprising a petroleum oil of lubricating viscosity and about 0.1 to 2% by weight based on finished oil of dicetyl monotelluride.



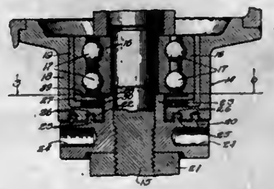
2,473,512

VOLTAGE CONTROL SYSTEM

Everett L. Deeter, Washington, D. C.

Application June 1, 1944, Serial No. 538,317
27 Claims. (Cl. 321—28)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a system of voltage control, the combination of a D. C. input, a storage battery, voltage reduction means for floating said storage battery across said D. C. input at a reduction in voltage thereof, a rotary converter operatively electrically connected to said battery and adapted to provide a source of A. C. power, a load circuit supplied by said A. C. source, and an electronic control circuit supplied by the A. C. source and adapted to control the charge and discharge



cycle of the battery, thereby to maintain the voltage of the battery within predetermined limits.

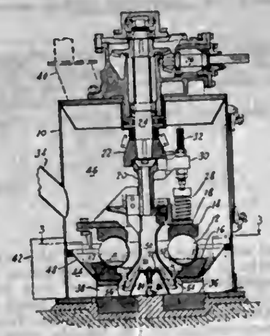
2,473,513

SEALING AND POSITIONING MEANS FOR GRINDER MECHANISMS OR THE LIKE

Raymond S. Dewey, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois

Application April 17, 1946, Serial No. 662,880
6 Claims. (Cl. 308—187.1)

1. In a grinding machine or the like comprising a spindle upon which a grinder is to be mounted, a bearing race and bearings around the spindle, a cover surrounding said bearing race including a lower annular portion extending inwardly toward the spindle, a bushing between the cover and the bearing race, and a driving collar surrounding the outer end of the spindle and adjacent the annular portion of said cover and including an annular portion extending up between the spindle and the annular portion of the cover to the lower end of the bearing race, positioning and sealing means including an annular metal washer in contact with the lower end of said bearing race, and between the bushing and said annular portion of the driving collar, and an annular sealing washer of compressible material between said metal washer and the annular portion of said cover with the sealing washer extending from the lower end of the bushing to the annular portion of the driving collar and forming a tight seal with said annular portion.



2,473,514

AIR-SWEPT PULVERIZER HAVING INTERNAL FLOW AREA ADJUSTING MEANS

George B. Ebersole, Akron, Ohio, assignor to The Babcock & Wilcox Company, Rockleigh, N. J., a corporation of New Jersey

Application August 14, 1943, Serial No. 498,632
13 Claims. (Cl. 241—53)

2. In a pulverizer comprising a casing having an outlet in its upper portion for pulverized material suspended in carrier air, upper and lower grinding rings coaxially arranged in a lower portion of the space enclosed by said casing, a circular series of grinding balls intermediate said rings and cooperating therewith to define a pulverizing zone, means for rotating one of said rings and thereby causing said balls to roll relative to both of said rings, means for feeding raw material to said zone adjacent the outer periphery thereof, means rotatable about the axis of said rings and axially fixed in relation to the lower of said rings for defining an annular throat of constant available flow area adjacent the inner

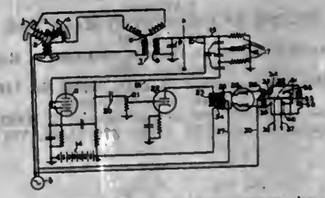
circumference of said lower ring for upward flow of carrier air into said pulverizing zone, adjustable valving means independent of and movable relative to said means defining said throat for rendering effective different proportions of said available throat area, and means operable from the exterior of said casing for moving said adjustable means to a position clear of said throat for rendering effective said constant available flow area of said throat.

2,473,515

ARTIFICIAL TOOTH

Leopold Egger, Linz, Upper Austria

Application August 7, 1947, Serial No. 766,997
In Austria July 7, 1946
Section 1, Public Law 690, August 8, 1946
10 Claims. (Cl. 32—8)



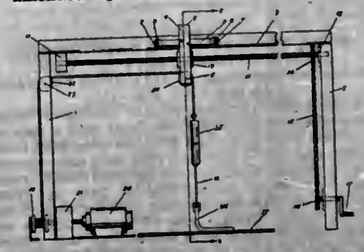
1. A composite artificial tooth comprising a supporting member, a crown, an elastic layer interposed between said supporting member and said crown, a rolling surface on said supporting member, a rolling surface on said crown, said supporting member and said crown being shaped so that one of said two parts comprises a pin and the other a bearing cup which pin and bearing cup interact at said rolling surfaces, and said supporting member and crown forming between themselves an annular gap occupied by said elastic layer.

2,473,516

GYRO FLUX VALVE COMPASS SYSTEM

Caesar F. Fragola, Brooklyn, and Reginald V. Craddock, Williston Park, N. Y., assignors to The Sperry Corporation, a corporation of Delaware

Application May 29, 1943, Serial No. 488,996
4 Claims. (Cl. 33—222)

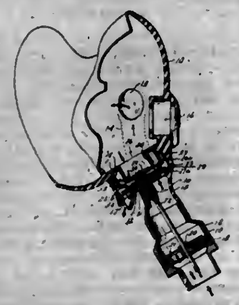


1. In a system for controlling precession of a gyro, a gyro including a rotatably supported rotor bearing case, an electronic amplifier, a source of periodically varying reference current, phase-sensitive means controlled by the voltage output of said electronic amplifier for causing precession of said gyro in one direction or the other in accordance with the phase relationship of the signal supplied thereto relative to said current source, means including a flux valve for supplying a signal voltage when the position of said rotor bearing case departs from a predetermined azimuthal position relative to the horizontal directional component of the earth's field, said phase-sensitive means and said flux valve being energized from said current source and said flux valve being adapted to provide a signal voltage output having a frequency substantially twice the periodicity of said source, said amplifier comprising an oscillator including a circuit tuned to the frequency of said current source and a feedback path from said tuned circuit to sustain oscillations at its tuned frequency, the signal voltage from said signal voltage supplying means being supplied in controlling relation to trip said oscillator and to control the phase sense of its output relative to said current source.

2,473,517

ADHESION TESTING MACHINE

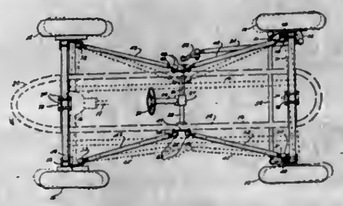
Doris M. Freedman, New York, N. Y.



Application August 6, 1945, Serial No. 609,295
10 Claims. (Cl. 73—150)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

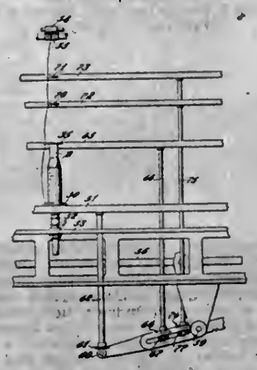
1. A device of the class described comprising a frame, a line supported by said frame and having one end connected to a test strip secured adhesively to a plate, means for taking up on said line at a uniform rate to pull said strip from

such plate, guide means for controlling the direction of pull of said line on said strip, movable means for maintaining the pull on said strip substantially perpendicular to such plate, and tension-indicating means in said line for registering the force exerted on said strip.



2,473,518
PRESSURE BREATHING MASK FOR AVIATION
Howard F. Garrard, Osborn, and Earl V. Rupp, Dayton, Ohio
Application December 16, 1946, Serial No. 716,592
4 Claims. (Cl. 128—142)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

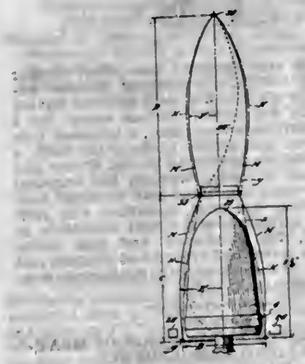
3. In an oxygen pressure mask having a mask body, an exhalation valve communicating with the atmosphere and pressure responsive expansible chamber means for loading said exhalation valve during an inhalation period, the improvement which comprises an inlet conduit at the lower portion of said mask body, inlet passage means connected to said conduit and terminating in a port communicating with the interior of the mask, an inlet valve means positioned within the inlet conduit below the connection of the inlet passage means therewith for operation in a region removed from exhaled air containing moisture, and a conduit connected to said inlet conduit on the supply side of said inlet valve and communicating with said expansible chamber means to provide loading pressure to said exhalation valve.



2,473,519
POISE MOUNTING FOR RACING CARS
Edward H. Gillitser, San Diego, Calif.
Application September 26, 1947, Serial No. 776,248
6 Claims. (Cl. 280—112)

1. In an automotive vehicle having a body-supporting frame, a pair of front and a pair of rear road wheels, a front axle carrying said front wheels and a rear axle carrying said rear wheels; a spring-suspension system between said frame and said axles comprising a pair of front brackets secured one to each end portion of the vehicle front axle, a pair of rear brackets secured one to each end portion of the vehicle rear axle, a pair of intermediate brackets secured one to each side of said vehicle frame intermediate the length thereof, a pair of front radius rods each extending from a respective intermediate bracket to the front bracket at the same side of the vehicle frame, a pair of rear radius rods each extending from a respective intermediate bracket to the rear bracket at the same side of the vehicle frame, a ball-and-socket joint between each end of each radius rod and the corresponding bracket, a pair of upstanding, inverted U-shaped cross members disposed one at each end of said frame, a generally U-shaped, transverse front spring having its ends secured to said front axle adjacent the opposite ends thereof and secured at its center to the center of the forward transverse frame member, and a U-shaped rear transverse spring secured at its

ends to said rear brackets and at its center to the center of the rear transverse frame member, the connection points between said transverse frame members and said springs being disposed above the center of gravity of the frame-and-body combination of the vehicle, whereby said frame tends to swing outwardly as said vehicle rounds a curve applying a downward force to the inner-end of each spring and shifting said radius rods to move said axles out of their normal position of parallelism with each other to a position in which the inner-ends of said axles are nearer together than the outer ends thereof.

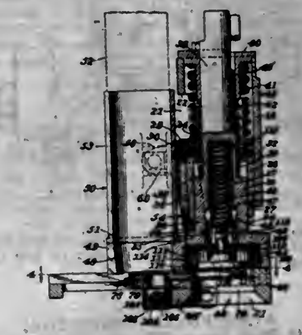


2,473,520
DEVICE AND PROCESS FOR TWISTING AND SPINNING
Eugene C. Gwaltney, Biddeford Pool, Maine, assignor to Saco-Lowell Shops, Boston, Mass., a corporation of Maine
Application January 29, 1947, Serial No. 724,987
22 Claims. (Cl. 57—75)

12. A twisting machine comprising a circularly-moving generator around which the thread is adapted to be threaded in an open bend, and

means defining an apex, said apex-defining means and said generator cooperating to form between them a figure of revolution of the thread of sufficient length to assume an outwardly-concave necked configuration if allowed to follow its natural course between said apex and generator with the thread so threaded, in combination with an encircling element contacting with the figure of revolution to stabilize a naturally outwardly-concave portion thereof in an outwardly-convex outline between said element and generator.

2,473,521
TWISTING DEVICE AND METHOD
Eugene C. Gwaltney, Biddeford Pool, Maine, assignor to Saco-Lowell Shops, Boston, Mass., a corporation of Maine
Application January 29, 1947, Serial No. 724,988
24 Claims. (Cl. 57—58)

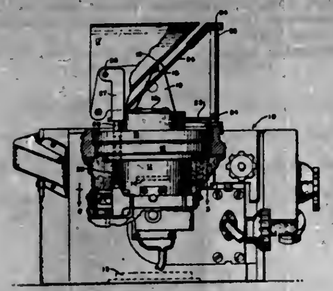


13. A twisting machine including means defining an apex, a circularly moving generator cooperating with said apex-defining means to form a figure of revolution of the thread adapted to assume an exteriorly concave necked configuration if allowed to follow its natural course between said generator and apex, means for supporting a package of thread, means for drawing the thread from the package to the generator and thence to the apex, in combination with means for applying encircling confining force to the figure of revolution at a level between said generator and apex to stabilize the portion of the figure extending from the generator to said level.

2,473,522
TREATMENT OF CRUDE OIL
Robert L. Harris, Cleveland, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application March 29, 1945, Serial No. 585,567
8 Claims. (Cl. 196—23)

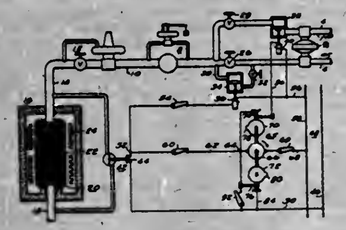
1. A method of treating crude oil to enable the formation of a sludge which is pumpable at lower temperatures, which comprises mixing the crude oil with ammonium oleate and allowing the mixture to settle, the amount of the soap being sufficient to cause the sludge which settles to be pumpable at a temperature within the range of 32° to 65° F. but not sufficient to prevent the formation of such a sludge phase.

2,473,523
CONTAINER CLOSING APPARATUS
Edgar Henschen and Stanley W. Dennis, Baltimore, Md., assignors to Crown Cork & Seal Company, Inc., Baltimore, Md., a corporation of New York
Application January 24, 1947, Serial No. 723,986
16 Claims. (Cl. 226—88.1)



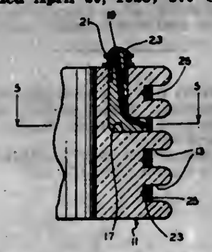
1. In apparatus for applying closures to containers, the closures each comprising a circumferential flange, said apparatus including a head comprising a vertical magazine for receiving a stack of the closures and a vertical throat horizontally spaced from the magazine, guide means extending between the lower ends of said magazine and throat, a slide reciprocable in said guide means between retracted and advanced positions, said slide comprising a rear portion which provides a supporting surface for the stack when the slide is in advanced position, a pair of spaced parallel forward extensions having surfaces adapted to support a closure through its flange, said extensions having free forward ends with the space therebetween unobstructed, whereby the extensions may be retracted from straddling relation with respect to a bottle neck, blade means carried by the extensions above the last mentioned surfaces for removing the lowermost closure from the stack and depositing it on said surfaces as the slide is retracted, an upwardly projecting abutment surface at the rear ends of said surfaces to retain the removed closure thereon for transportation to a position beneath said throat as the slide is advanced, and means operable upon relative vertical movement of said head and a container to be closed for reciprocating said slide between its limit positions.

2,473,524
LEAD ESTIMATION TRAINING REFLEX GUN SIGHT
Donald L. Hibbard and John N. M. Howells, United States Navy
Application June 30, 1945, Serial No. 602,624
8 Claims. (Cl. 88—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



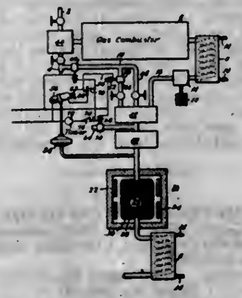
1. In an optical sight, the combination of an optical system including a light source, a single reticule, and an image collimating system, a pair of combining glasses, said glasses being each positioned to project a collimated image of said reticule, one of the combining glasses being in fixed position with respect to said reticule and the

other combining glass being rotatable about two axes normal to each other for tilting movement



in two degrees of freedom, and means to shift one of said images into or out of the optical system.

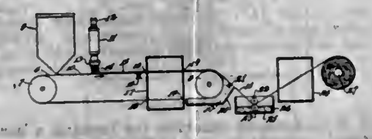
2,473,525
ATMOSPHERE PRODUCTION
John G. Hoop, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 21, 1944, Serial No. 564,541
16 Claims. (Cl. 252—373)



1. A method of manipulating a gas-generating apparatus; said apparatus comprising a porous catalyst bed having some carbon deposited within its pores, a gas-supply means for forcing a mixture of two gases through said catalyst, richness-regulating means for varying the proportions of the gases in said mixture, and means for adding heat to said mixture while it is undergoing a reaction within the pores of said catalyst; said method comprising periodically forcing, through said catalyst, in a predetermined direction, a mixture of a carbonaceous fuel-gas and air in an amount less than necessary to oxidize, to carbon-monoxide, the carbon content of the mixture so that additional free carbon will be slowly depositing within the pores of the catalyst; and before the deposited carbon clogs the apparatus, forcing through said catalyst in said direction, instead of the first-mentioned mixture, another mixture of said gases having a relatively greater amount of air than said first mixture for partially oxidizing the carbon-deposit within the pores of the catalyst; and periodically, for brief intervals, forcing through the catalyst in said direction, a gas-supply composed substantially entirely of air for consuming carbon deposited at the gas-entrance end of the catalyst.

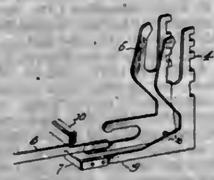
2,473,526
SLIP RING
Arthur Hood, West Long Branch, N. J., Morris Sobel, New York, N. Y., and Edgar A. Terhune, Red Bank, N. J.
Application November 19, 1945, Serial No. 629,682
2 Claims. (Cl. 172—324)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a slip ring device a one-piece annular ceramic body having a metallized channel extending completely about it, said channel having a substantially flat bottom surface except for a groove for receiving a conductor, a terminal hole extending from said groove through the body, a turn of a conductor positioned in said groove and having its ends threaded through the terminal hole, solder completely filling said terminal hole and surrounding said ends, a contact ring split at one point extending about said conductor in said channel, the conductor and ring being sweated to the metallized groove and channel and to each other to form a smooth, continuous contact surface about said body.



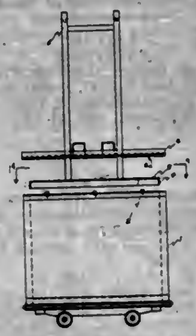
2,473,527
APPARATUS FOR PRODUCTION OF HEAT-TREATING ATMOSPHERES
John G. Hoop, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 12, 1945, Serial No. 622,051
1 Claim. (Cl. 23—281)

A system for producing a special atmosphere, comprising, in combination, a gas-combustor having an inlet and outlet, pipe-means connected to said inlet for conveying to said gas-combustor a fuel-gas, comprising a hydrocarbon, and an oxidising gas, moisture-separating means, a conduit connected to said outlet and extending to said moisture-separating means, a gas-generator including a closed reaction-chamber having a gas-inlet and a gas-outlet in its otherwise



solid walls, and having a porous non-carbonaceous catalyst filling, said gas-generator including means for heating said catalyst filling, a gas-conduit system comprising pipe line connections from said moisture-separating means to said gas-inlet, said gas-conduit system including a branched inlet pipe-means for a supply of carbonaceous fuel-gas to be added to the treated combusted gas from said moisture-separating means, a pressure responsive device comprising a pipe connected to said gas-conduit system, a valve in said branched inlet pipe-means, an interconnecting means extending between said pressure responsive device and said valve operatively interconnecting them so that the device causes operation of the valve, and a product-gas outlet from said gas-outlet of said reaction chamber.

2,473,528
UNWOVEN FILAMENTARY WEB AND METHOD OF PRODUCING SAME
Howard L. Hoover, St. Paul, Minn., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Application August 14, 1946, Serial No. 690,544
10 Claims. (Cl. 154—101)



1. The method of producing a web of artificial filaments comprising extruding plastic spinning material into a plurality of filaments and depositing said filaments in overlapping relation, while still sufficiently plastic to adhere to one another and to particulate material, upon a support coated with said particulate material, whereby some of said particles becomes bonded to said filaments and said filaments are bonded to each other prior to the evaporation of said solvent.

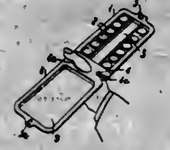
2,473,529
FEED LINE MACHINE
Theodore M. Knight, Alexandria, and David A. McBee, Vienna, Va.
Continuation of application Serial No. 599,039, June 12, 1945. This application March 10, 1949, Serial No. 80,702
1 Claim. (Cl. 178—25)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In a teletypewriter mechanism which includes line feed mechanism and carriage return mechanism, a carriage return function lever for operating the carriage return mechanism in response to carriage return signals and a line feed function lever for operating the line feed mechanism in response to line feed signals, said levers being widely spaced from each other, means for operating the line feed mechanisms whenever return function signals are received, comprising an additional lever closely adjacent to the line feed lever and also responsive to the carriage return signal, and connections between the second carriage return function lever and the line feed mechanisms for operating the line feed mechanism when the second carriage return function lever is operated.

2,473,530
PROCESS OF MAKING BAR SOAP WITH INGRAINED EMBLEM
Alvin H. Knoll, Cincinnati, Ohio, assignor to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
Application June 23, 1945, Serial No. 601,144
2 Claims. (Cl. 252—370)

1. A process of making bar soap having an ingrained emblem which includes preparing a mass of soap which is at least partially in the neat soap phase, is in a flowable condition and capable of flowing together and reuniting when divided, and while said soap mass is in said condition, causing it to flow through a grid having elements coacting to form an emblem occupying a substantial surface area of a bar to be formed of said mass, allowing the soap to flow together beyond said grid and without essentially disturbing the pattern thus created in the mass, cooling the soap until it is fully solidified and cutting it into individual bars.

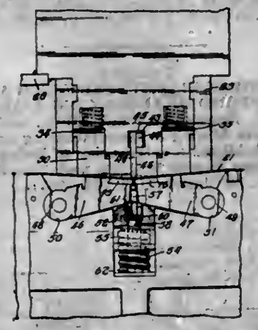
2,473,531
DISINTEGRATOR ROTOR FOR HAMMER MILLS AND THE LIKE
Clarence W. Lanter, Bartlett, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application September 17, 1948, Serial No. 502,754
1 Claim. (Cl. 241—191)



A disintegrator rotor comprising a substantially solid disc having at least three symmetrically disposed peripheral arms at right angles to the face of the disc and substantially of the same thickness as the disc arranged to present relatively thin striking surfaces, each of said arms occupying the same peripheral rotation area upon rotation of the disc, and each arm being provided on its forward face with a series of sharp strik-

ing surfaces on different planes at right angles to the face of the disc, said planes being parallel

to and spaced from each other, with all said surfaces being on one side only of the disc.

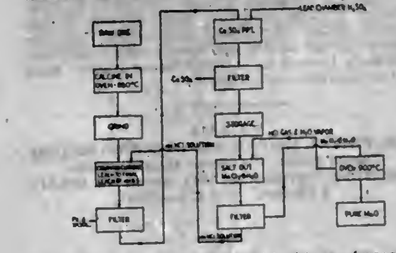


2,473,532
PAINTBOX
Philippe Lazare, Marseille, France
Application May 8, 1947, Serial No. 746,769
In France June 3, 1946
3 Claims. (Cl. 41—4)

1. A paint box comprising a body to receive brushes and colour materials, longitudinal recesses therein to house the said brushes and colour materials, a thumb hole therein to permit the insertion of the thumb for holding the box, a removable cover member pivoted thereto, a pivot stud at one extremity of the box on which the cover member can pivot to expose the contents of the box, a slotted hole in said cover member to engage with the stud and which can be released therefrom to permit removal of the cover, a second stud at the other extremity of the box, a tapered slot in the said cover member to engage releasably therewith and serving to retain the cover when in closed position, a thumb-hole in the cover for insertion of the thumb for holding the cover, and a dished portion in the said cover to receive painting materials, the cover member being removable from the box to permit its inversion and reattachment in the inverted position to the box by the engagement of the said tapered slot with the second stud whereby the thumb holes of the box and cover member may be brought into a corresponding position in which the thumb can be placed therein to hold both box and cover member.

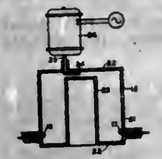
2,473,533
METHOD AND APPARATUS FOR CORRUGATING SHEET METAL BY A RECIPROCATING BENDER WITH A PIVOTED SIDE SHAPER
Michael N. Lebedeff, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois
Application December 19, 1946, Serial No. 717,277
7 Claims. (Cl. 153—3)

1. The method for forming a permanent corrugation in a flat sheet which comprises pressing a U-shaped depression transversely of the entire sheet, and of substantially the same wall thickness as the remainder of the sheet into a portion of said sheet while slipably holding the sheet on both sides of the depression area to restrict movement thereof, removing the pressing member from within the U to leave the same free closing the upper edges of the U by lateral pressure and then imposing a force, at the bottom of the U, greater than the elastic limit of the material, substantially perpendicular to said lateral pressure while increasing said lateral pressure and then moving the sheet laterally a predetermined distance and repeating the forming steps.



2. A corrugating machine for forming a permanent corrugation in a sheet including means for, in seriatim, slipably holding said sheet by pressure on its upper surface, said holding pressure pressing the lower surface against at least a pair of transverse spaced oscillatory pressure resistant means, means for pressing a U-shaped channel in the portion of the sheet in the space between said holding means while said holding means holds said sheet by pressure on each side of said portion, means for releasing said holding pressure, means for reapplying said holding pressure with said pressing means withdrawn from said channel, said reapplied holding pressure oscillating said pressure resistant means a greater extent whereby said space is decreased and said means exert lateral pressure on the channel to close the U and means for imposing a force greater than the elastic limit of the material substantially perpendicular to said pressure at the bottom of the U.

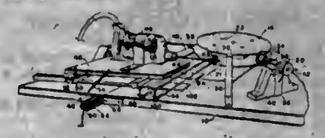
2,473,534
PRODUCTION OF MAGNESIUM OXIDE
Rex B. Lloyd, Boulder City, Nev.
Application January 23, 1942, Serial No. 427,863
11 Claims. (Cl. 23—201)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a process for producing a relatively pure magnesium compound from crude magnesium ores involving the leaching of a basic magnesium substance with an acidic chloride solution, the steps which comprise subjecting the impure leach liquor to a preliminary partial purification, then treating the partially purified solution with hydrogen chloride to precipitate pure crystalline hydrated magnesium chloride, removing the crystalline precipitate, calcining the crystalline precipitate at a relatively low temperature to liberate most of the water and some of the hydrogen chloride, then calcining the partially

decomposed residue at a high temperature to liberate substantially all of the remaining com-

bined chlorine as hydrogen chloride, and recovering substantially pure magnesium oxide.



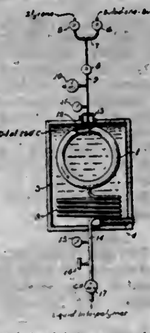
2,473,535
SWITCHING AND MODULATION SYSTEM
Abbott S. Maeder, deceased, late of East Hempstead, N. Y., by Lauretta Maeder Murphy, administratrix, East Hempstead, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Original application April 4, 1941, Serial No. 386,766, now Patent No. 2,408,425, dated October 1, 1946. Divided and this application August 3, 1944, Serial No. 547,862
4 Claims. (Cl. 332—56)

1. A cavity resonator comprising a substantially enclosed chamber, coupling means for connecting said chamber with a source of radio frequency energy and with an output circuit, respectively, means for recurrently detuning said resonator and substantially completely halting the flow of energy from said source to said circuit comprising a rotatable member having at least a portion thereof projecting within said chamber, the extent of said projection remaining constant with rotation, and means for rotating said member so as to vary the position of said member within said chamber and accordingly to vary the impedance of said resonator with respect to said source.

2,473,536
DEVICE TO REPRODUCE TIMING DISKS
Harry Ephriam McCoy, United States Navy
Application September 16, 1944, Serial No. 554,690
1 Claim. (Cl. 90—15.1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A machine for manufacturing precision indexes comprising a master index, an index blank upon which the master index is to be reproduced, said index blank and master index being fixed in superposed relation, a support adapted to receive the index blank for rotation in a horizontal plane, a friction disc rotatable about a horizontal axis, said friction disc being arranged so that its peripheral surface engages the surface of the index blank, means for rotating the friction disc to effect rotation of the index blank, an index member fixed adjacent to the master index, a portion of the index finger overlying the peripheral edge of the index blank, a cutting disc, an electric motor having a shaft to which the cutting disc is fixed, a movable motor support to which the electric motor is clamped, a pair of rails upon which the motor support is adapted to slide, said motor and shaft being so arranged that movement of the motor support on said rails will move the cutting disc radially of the index blank, yieldable means normally holding the motor support, and hence the motor and cutting disc in a for-

ward inoperative position, a flexible member attached to the movable motor support and to a treadle the latter being adapted by actuation thereof to move the motor support rearwardly against the opposition of the yieldable means to cause the cutting disc to travel over the surface of the index blank, stops adjacent to the motor support for limiting the rearward movement of the motor support to different amounts and means for selecting one or the other of the stops and moving it into a position to engage the motor support as it is moved rearwardly.



2,473,537
ROTARY BIT OPERATING MECHANISM
Harry W. McDonald, Kansas City, Mo.
Application August 8, 1945, Serial No. 609,591
3 Claims. (Cl. 255—4)

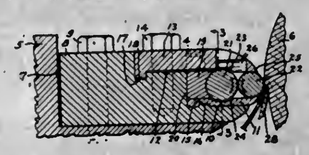
1. A rotary motor of the character described adapted to be attached at its upper end to a drill pipe and its lower end to a drill bit comprising, a barrel, a coupler having a head for attaching said barrel to the drill pipe, a rotor in said barrel having a head spaced from said first named head providing a fluid chamber therebetween, fluid medium in said chamber, a cam in said barrel the forward portion of said cam being cut away at each end and the rear portion extending the length of said rotor, said barrel having passages communicating with said cut away portions of the cam, said rotor having a plurality of grooves therein, blades in said grooves, means resiliently urging said blades against the wall of said barrel and cam to prevent locking of said rotor, a pinion

gear retaining ring carried by the lower end of said rotor, a ring secured to the barrel, an intermediate gear rotatably carried by said ring and meshing with the pinion gear, a ring gear engaging said intermediate gear, a hollow rotatable shaft in the lower end of said barrel, means for attaching said shaft to said ring gear, and means for passing the fluid medium from said chamber through the rotor and shaft to said bit for causing rotation of the bit.

2,473,538
LIQUID STYRENE-BUTADIENE INTERPOLYMERS
Otis R. McIntire, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application June 21, 1945, Serial No. 600,639
10 Claims. (Cl. 260—669)

1. The method which comprises heating a solely hydrocarbon mixture consisting essentially of the monomers of styrene and butadiene of which the styrene represents from 40 to 85 per cent by weight at a temperature from 235° C. to 275° C. in a closed vessel for a time sufficient to produce a viscous liquid interpolymer.

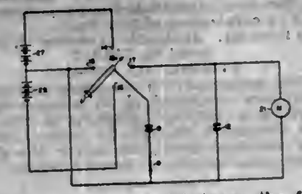
2,473,539
HIGH-FREQUENCY DRYING
Charles J. Merriam, Winnetka, Ill., assignor, by mesne assignments, to Guardite Corporation, Wilmington, Del., a corporation of Delaware
Application November 2, 1944, Serial No. 561,626
8 Claims. (Cl. 34—1)



1. The method of drying moist particles of a substantially non-volatile material which comprises passing the material in unsupported concurrent flow by gravity in a gas substantially hotter than the particles, wherein the surface of the particles is dried, and supplying, at least during a latter portion of the flow in said gas, high frequency current to the particles, whereby they are internally heated to a temperature higher than that of the exteriors thereof.

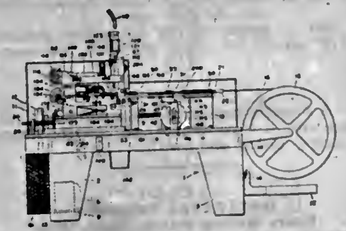
2,473,540
ELECTRICAL MOTOR AND DYNAMO BRUSH
Tobias Miller, Cleveland Heights, Ohio
Application February 26, 1944, Serial No. 524,015
2 Claims. (Cl. 171—325)

1. An electrical contact member comprising a body of conducting material including compressed carbon, and a non-melting coating of amorphosed cellulose closely applied to the surface of such body.



2,473,541
ROLLER PRESSURE BAR FOR VENEER LATHES
William J. Miller, Seattle, Wash., assignor to Elliott Bay Mill Co., Seattle, Wash., a corporation of Washington
Application March 31, 1947, Serial No. 738,456
2 Claims. (Cl. 144—213)

1. Roller pressure bar means for a veneer lathe comprising a roller carrying bar having a roller receiving recess; a backing roller carried by said bar; a pressure roller carried by said bar and bearing against said backing roller, said pressure roller having an exposed peripheral portion adapted to engage a log from which veneer is to be removed; and a cover portion rigid with said bar extending over both of said rollers and having openings therein for the discharge of foreign matter from the space around said rollers.



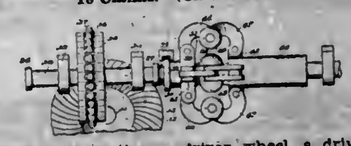
2,473,542
ELECTRIC TACHOMETER
La Verne R. Philpott, Washington, D. C.
Application February 25, 1944, Serial No. 523,957
1 Claim. (Cl. 175—183)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

Means for indicating the speed and direction of rotation of a body by the use of an electric circuit, which comprises a rotating shaft whose speed of rotation is proportional to the speed of the body whose speed it is desired to indicate, a switch contact arm mounted on said shaft and adapted to rotate therewith, four stationary contact points adapted to be sequentially contacted by said contact arm, a low potential voltage source having positive potential, negative potential, and mid-potential terminals, said positive and negative potential terminals being connected to opposite contact points and said mid-potential being connected to a contact point intermediate said last mentioned contact points, a series connected condenser and resistance connected between said contact arm and said mid-potential contact, and a

metering circuit connected between the fourth contact and said mid-potential point, said metering circuit being composed of a center-zero type meter and a high capacity condenser connected in parallel therewith, whereby said meter will give readings which are indicative of the speed and direction of rotation of said body.

2,473,543
APPARATUS FOR THE MANUFACTURE OF STUDS
Arthur J. Randolph, Santa Rosa, Calif.
Application July 25, 1945, Serial No. 607,072
10 Claims. (Cl. 219—4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An apparatus for the manufacture of studs comprising a frame, a drive shaft mounted to rotate on said frame, means to rotate said drive shaft, means supported on said frame for carrying a supply of wire, means supported on said frame and operatively connected with said drive shaft for feeding wire intermittently from said carrying means into said apparatus, means for straightening the wire, means supported on said frame for cutting the wire to predetermined lengths including a pair of movable cutting elements operatively connected with said drive shaft, a carriage mounted adjustably on said frame, means supported on said carriage for gripping the wire periodically including a pair of movable jaws and pneumatic means operatively connected with said drive shaft for closing and opening said jaws, a disc magazine supported on said carriage, a slide mounted for reciprocating movement on said carriage to move between retracted and extended positions, spring means normally urging said slide to retracted position, means carried by said slide for releasably securing a disc in position to contact the end of wire held by said wire gripping means, means operatively connected with said drive shaft to feed discs singly from said magazine to said disc securing means, a welding electrode carried by said slide adapted to contact a disc held within said disc securing means, cam means mounted to rotate on said frame operatively connected with said drive shaft and adapted to act periodically on said slide and move the latter to extended position against the action of said spring means, the disc held within said disc securing means contacting the end of wire held by said wire gripping means when said slide is in extended position, the welding electrode and wire gripping means being electrically connected to a source of electric current of welding intensity, said disc securing means releasing the disc on the return movement of the slide, and means operatively connected with said drive shaft for removing a completed stud from the apparatus.



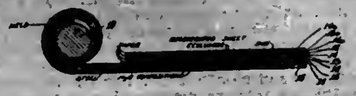
2,473,544
POLYALKYL-CYCLOHEXANOL ACRYLATES
Chessie E. Rehberg, Glenside, and Charles H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application March 29, 1946, Serial No. 658,200
6 Claims. (Cl. 260—486)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. An ester of a polyalkyl substituted cyclohexanol and an acid of the formula

$$CH_2{=}CRCOOH$$

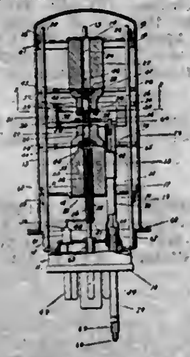
wherein R is a member of the group consisting of hydrogen, a lower alkyl radical, and halogen.

2,473,545
VARIABLE-SPEED POWER TRANSMISSION
Graeme Reid, Essex Fells, N. J.
Application May 7, 1945, Serial No. 592,383
18 Claims. (Cl. 74—351)



1. In combination, a driven wheel, a driving wheel with its axis disposed at right angles to and in a plane displaced from the plane of the axis of the driven wheel, said driven wheel having a plurality of cam ridges and grooves therebetween radially disposed on its surface adjacent to the periphery of the driving wheel, said driving wheel being provided with a plurality of driving studs angularly disposed about its periphery, said driving studs being adapted to move through the grooves of said driven wheel without contacting in driving relation the walls of said cam ridges upon rotation of the driving wheel, and means for axially moving said driving wheel whereupon said driving studs contact in driving relation the walls of said cam ridges of the driven wheel upon rotation of said driving wheel and impart a rotary motion to said driven wheel.

2,473,546
ALKALINE PRIMARY CELL
Samuel Ruben, New Rochelle, N. Y.
Application January 23, 1943, Serial No. 473,320
16 Claims. (Cl. 136—107)



9. A primary cell comprising, in combination, a sheet zinc electrode, a sheet depolarizing electrode, a semi-permeable membrane and at least

one layer of fibrous material interposed therebetween, and an alkaline electrolyte impregnating said membrane and fibrous layer, said depolarizing electrode comprising a metal backing of a ferrous material and a depolarizing layer bonded

thereto comprising a mixture of mercuric oxide, 1 to 15% of finely divided graphite and a binder, said mercuric oxide being the active depolarizing agent and said graphite increasing the electrical conductivity of said depolarizing layer.

2,473,547
ELECTRON DISCHARGE DEVICE
Robert C. Schmidt, Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application September 28, 1945, Serial No. 619,017
4 Claims. (Cl. 250—27.5)

1. An electron-discharge device comprising: a cathode member; an anode member; said cathode and anode members being spaced to present an electron path therebetween; means within said device establishing a magnetic field in a direction transversely of said electron path; a base member; means, rising from said base member, supporting said cathode and anode members and said field-establishing means; and an envelope, hermetically sealed to said base member, and cooperable therewith to enclose said cathode and anode members and said field-establishing means; a part of said envelope constituting a part of the return path of said magnetic field.

2,473,548
POLYMERIZATION OF VINYLIDENE COMPOUNDS IN AQUEOUS EMULSION IN THE PRESENCE OF IONIZABLE SILVER COMPOUNDS AND AMMONIA
Grant W. Smith, Grand Forks, N. Dak., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application October 11, 1947, Serial No. 779,412
6 Claims. (Cl. 260—84)

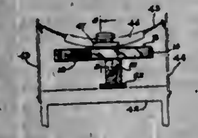
1. The method which comprises polymerizing a monomeric vinylidene compound in an aqueous medium comprising silver ammonia complex ion and a peroxygen compound and in the absence of substantial amounts of gaseous oxygen.

2,473,549
METHOD OF POLYMERIZING VINYLIDENE COMPOUNDS IN AQUEOUS MEDIUM IN THE PRESENCE OF SILVER ION AND OXALATE ION
Grant W. Smith, Grand Forks, N. Dak., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application October 11, 1947, Serial No. 779,413
6 Claims. (Cl. 260—84)

1. The method which comprises polymerizing a vinylidene compound in an aqueous medium comprising a compound ionizable to yield silver ion, a compound ionizable to yield oxalate ion and a peroxygen compound, and in the absence of substantial amounts of gaseous oxygen.

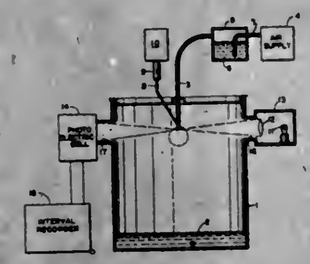
2,473,550
DIRECTLY HEATED CATHODE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application August 19, 1947, Serial No. 769,348
9 Claims. (Cl. 250—27.5)

1. A directly-heated electron-emitting cathode comprising a bare compressed body of thoria, a refractory metal, and cobalt.



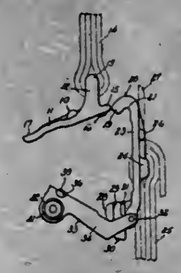
2,473,551
WALLPAPER TRIMMER
Henry Morton Stanley, Buhl, Minn.
Application December 12, 1946, Serial No. 715,751
4 Claims. (Cl. 30—136)

4. In a paper trimming device, a handle, a head attached to the handle and having a recess adapted to receive a razor blade, guide posts on the head, a cover plate attached to the head and having holes to receive the guide posts, a wheel rotatably mounted on the cover plate, and spring means to urge the wheel down when cutting paper.



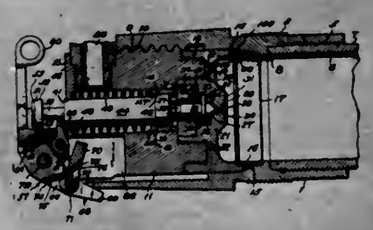
2,473,552
DEVICE FOR HEAT SEALING SEAMS
Morris Staw, Forest Hills, N. Y.
Application March 12, 1947, Serial No. 734,958
3 Claims. (Cl. 154—42)

1. In combination with a table having a flat top surface, pedestals extended vertically from the top surface of the table substantially midway between the ends thereof, a padded pressing board mounted on the upper ends of said pedestals and upon which pieces of material to be heat treated may be placed with their adjacent edges overlapped, upright members mounted on the ends of the table on diametrically opposite sides of said pressing board, a pressing cloth disposed over said



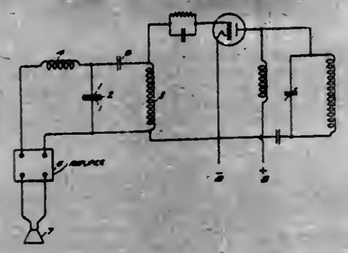
pressing board between the upper ends of said upright members, and means resiliently supporting said pressing cloth between the upper ends of said upright members, whereby an iron rested on said pressing cloth will lower said pressing cloth onto said pressing board to heat seal the adjacent edges of the pieces of material sandwiched between the adjacent faces of said pressing board and the lowered pressing cloth.

2,473,553
METHOD OF AND APPARATUS FOR MEASURING THE FILM STRENGTH OF LIQUIDS
Arthur J. Stokes, Washington, D. C.
Application January 7, 1946, Serial No. 639,679
5 Claims. (Cl. 73—53)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



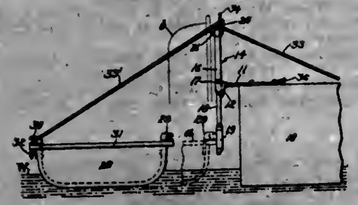
2. An apparatus for measuring the film strength of a liquid including a tank, a quantity of liquid in said tank to maintain a substantially moisture saturated atmosphere in said tank, a tube having its lower end extending into said tank, a source of air connected to said tube for maintaining a constant flow of air from said tube, means adjacent said tube for applying a measured quantity of the liquid to be tested to the end of said tube disposed in said tank, a light source, a light sensitive device, said light source and said light sensitive device being so disposed with respect to each other and the lower end of said tube that at least a portion of the illumination from said light source is directed toward said light sensitive device through a point immediately below the lower end of said tube, and means controlled by said light sensitive device operable in response to changes in energization of said light sensitive device to record the time of occurrence of such changes.

2,473,554
QUICK-RELEASE CONNECTOR FOR STRAPS AND THE LIKE
Alden Y. Warner, Farmington, and Wilbur J. Craven, East Hartford, Conn., assignors to The Capewell Manufacturing Company, Hartford, Conn., a corporation of Connecticut
Application January 2, 1947, Serial No. 719,248.
13 Claims. (Cl. 24—201)



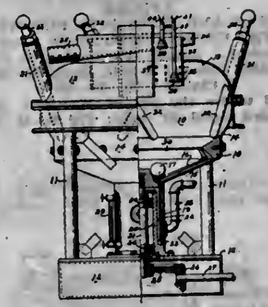
1. A quick release connector comprising two separable units, the first of said units comprising a base provided with strap attaching means and having an inwardly facing bearing at one end, the second of said units having a base adapted to seat on the base of the first unit with one end pivotally engaging the said bearing thereof, said second unit having strap attaching means spaced from the plane of its base and adjacent the pivoted end, locking means on the first unit spaced from said bearing and adapted to engage the second unit to prevent relative pivoting of said units at said bearing, and manually operable means for actuating said engaging means.

2,473,555
BREECH-LOADING MORTAR WITH OBTURATOR CASE
Saul Weiss, Washington, D. C., assignor to the United States of America as represented by the Secretary of War
Application July 24, 1947, Serial No. 763,407
11 Claims. (Cl. 89—26)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



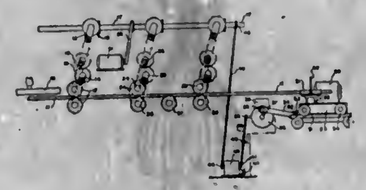
1. In a mortar, the combination of a breech ring having an anterior barrel-receiving portion, a posterior breech block-receiving portion and an intermediate tapered portion; a barrel mounted in said anterior portion; a breechblock removably mounted in said posterior portion; and an obturator case mounted on said block, having a tapered exterior surface, and seated in said intermediate portion.

2,473,556
DEVICE FOR CONTROLLING OSCILLATING CIRCUITS
Carl A. Wiley, Xenia, Ohio
Application March 15, 1943, Serial No. 479,160
6 Claims. (Cl. 332—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



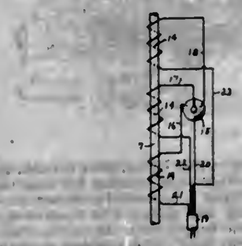
1. In a system having a first circuit with which a capacitance responsive to a voltage load variation to vary its time constant is cooperatively associated, a local loading circuit to said capacitance substantially independent of the first circuit, and control means in the last-named circuit to vary the loading on said capacitance; that improvement wherein the capacitance includes electrodes and an interposed dielectric consisting of a body of titanate substance responsive to changes in relative potentials of its electrodes by internal molecular change to vary its dielectric constant.

2,473,557
DAVIT
Morgan L. Woodruff, Waban, Mass.
Application April 28, 1947, Serial No. 744,485
8 Claims. (Cl. 9—39)



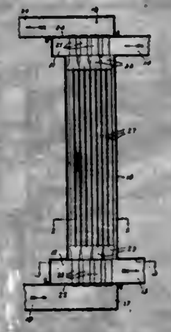
8. A davit apparatus comprising a U-shaped lever having its intermediate portion disposed horisontally and equipped with a rotatable sheave; means pivotally connecting said lever intermediate its opposite ends to a relatively large vessel to swing on an axis that is parallel with and above the level of the water supporting said vessel, said means comprising a pair of cantilever arms fixed to said vessel each of which is provided at its outer end with a fork within which the intermediate portion of one of the arms of said lever is pivotally mounted with the crotch of at least one of said forks serving as a stop to limit the movement of the lever toward an upright position, said lever being angularly adjustable on said axis to and from said upright position alongside said vessel and to and from an approximately horizontal position; a pair of horizontally spaced-apart yokes carried by the end of said lever that is lowermost when said lever occupies its upright position; a tender for said vessel provided at one side thereof with a pair of horizontally spaced-apart elements to pivotally interlock with said yokes; a cable fastened at its one end to the intermediate portion of said lever, said cable being under the control of an operator stationed upon said vessel and extending from said vessel over said sheave and being engageable with the opposite side of said tender and also operable to urge said first-mentioned side of the tender against said yokes and thereafter to roll the tender upwardly into position alongside of said lever thereby pivotally interlocking said elements with said yokes and swinging said lever into its approximately horizontal position; and cleats on said tender and vessel with which said cable is engaged to separably fasten said lever in its approximately horizontal position with the tender fixedly but separably secured thereon in an upside down position by said cable and the interlocked elements and yokes.

2,473,558
CENTRIFUGAL BALL MILL
Charles Erb Wuensch, Saratoga, Calif.
Application March 20, 1944, Serial No. 527,217
12 Claims. (Cl. 241—34)



1. In an ore grinding mill, the combination of a substantially closed housing, means for introducing a material to be ground in a downwardly direction through the top of said housing, means for admitting a counter-current flow of fluid upwardly into the lower part of said housing, a centrifugally operating grinding means located at the lower part of said housing adapted to agitate and throw the material being ground therefrom by centrifugal force, deflector means above said grinding means and within said housing against which the material acted upon by said centrifugal grinding means will impinge, whereby the heavier particles of the material will be returned by gravity to said centrifugal grinding means and the finer particles will be entrained in suspension by the counter-current flow of fluid within the mill, a discharge conduit at the upper part of said housing through which the ground material entrained by the introduced fluid may flow, and density responsive means positioned within said discharge conduit for controlling the admission of new material and fluid into said housing as determined by variations in the density of the entrained material flowing from the mill through said discharge conduit.

2,473,559
APPARATUS FOR CUTTING TUBES
James L. Anderson, Chester, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application April 22, 1942, Serial No. 440,049
10 Claims. (Cl. 29—89)

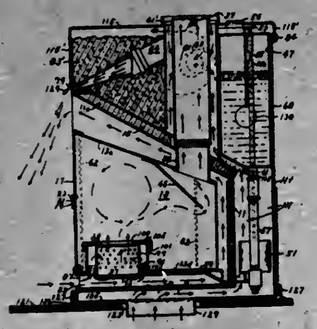


1. Tube-cutting apparatus including a flying saw, a first-class lever having a long upper arm and a shorter lower arm, said lever being movable about a fulcrum that moves lengthwise of the tube as an element of the flying saw, and the axis of which extends substantially parallel to the longitudinal axis of the tube, a tube guide supported at the upper end of the lever, a cam-follower on the lower end of the lever, and a stationary cam extending generally lengthwise of the direction of movement of the tube and having a cam slot into which the follower extends.

2,473,560
UNIT WATER HEATER
Edward S. Bagley, New Orleans, La.
Application August 29, 1946, Serial No. 693,713
1 Claim. (Cl. 219—39)

In a water heater for supplying low, medium and high heat interchangeably to water, the combination of a single water supply pipe, three separate heating coils around different portions of said pipe respectively, a four way electric switch having three contact points, an electrical cable, a wire in said cable for supplying current to said switch, a wire connecting the first contact with the first coil, a wire connecting the second contact with the second coil while the first contact is connected with the first coil, a wire connecting the third contact with the third coil while the first and second contacts are connected with the first and second coils respectively, a return wire leading from the first coil to said cable, a return wire leading from the second coil to said cable, a return wire leading from the third coil to said cable, and a faucet on the delivery end of said supply pipe in non-current relation to said switch.

2,473,561
HEAT EXCHANGER
James A. Balmer, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Application July 16, 1945, Serial No. 605,264
2 Claims. (Cl. 257—224)



1. A heat exchanger comprising walls forming two chambers connected by a passage, means to supply fluid to one side of one chamber and to withdraw the said fluid from one side of the other chamber, a group of relatively small tubes extending longitudinally within the passage, a group of relatively large tubes located in one of the chambers and extending substantially across the same in the direction of the passage, a plurality of fittings each of which connects one of the large tubes to a plurality of the small tubes, the fittings being spaced from one another to provide ample room for the flow of the said fluid therebetween, and means to supply a second fluid for flow through the two groups of tubes in series to effect a transfer of heat from one fluid to the other.

2,473,562
HEATER UNIT AND SYSTEM
Elias B. Barnes, Elkhart, Ind.
Application September 17, 1945, Serial No. 616,771
4 Claims. (Cl. 237—50)

1. In a laterally diffusing air changer and heater, wall means forming a combustion chamber of a rectangular shape in all horizontal cross-sections, said combustion chamber having its top wall sloping upwardly from back to front, wall means forming an insulating housing of a similar shape but having larger dimensions than the chamber and disposed in enclosing spaced relation around said chamber, said housing having an air projecting port in the front, the bottom wall of said housing having a ventilating aperture for admitting fresh air to rise in the space around said chamber for receiving heat prior to projection from the open front port of the housing, a fuel burner mounted in said combustion chamber, means enclosing a space above said housing, the bottom wall of said combustion chamber having an air inlet aperture, a floor air inlet conduit connecting from said air inlet aperture through the space under the combustion chamber and opening toward the front of the housing for drawing air off of the floor of an enclosure to be heated, a stack connection opening through the top wall of the insulating housing

from the combustion chamber for discharging combustion gases, a sleeve around said stack, said sleeve being larger in diameter and having an aperture in one side, a blower and motor mounted in the space above the housing with the blower intake port spaced slightly from said aperture in the sleeve for drawing air from the space above said housing, an air flow restricting cover fitting over said housing around said stack and sleeve for enclosing said space to cause inflowing air to

flow from said sleeve to said blower while the loosely coupled relation between the blower and the sleeve aperture causes a portion of cool fresh air to flow around said motor, conduit means connecting from the discharge side of said blower, a nozzle connected to said air conduit means, deflector means adjacent said nozzle, and said nozzle and deflector means being suitably shaped and positioned above the open side of said housing for projecting a sheet of air so as to deflect the heated air laterally and downwardly.

2,473,563

PREPARATION OF MANGANESE DIOXIDE

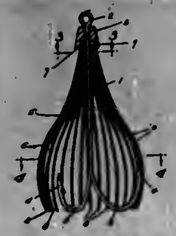
Maurice Beja and René Albert Loisy, Salindres, France, assignors to Compagnie de Produits Chimiques et Electrometallurgiques Alais Froges et Camargue, Paris, France, a joint-stock corporation of France

No Drawing. Application April 2, 1946, Serial No. 659,130. In France March 6, 1944

2 Claims. (Cl. 23—145)

1. A method of producing depolarizing manganese dioxide which comprises starting from a manganese dioxide of low depolarizing power, reducing this dioxide by heating into at least one manganese oxide containing a proportion of oxygen lower than that existing in manganese dioxide and higher than that existing in bivalent manganese oxide, forming an aqueous suspension of the manganese oxide thus obtained, and treating this suspension with gaseous chlorine.

2,473,564



WEEDLESS FISHHOOK

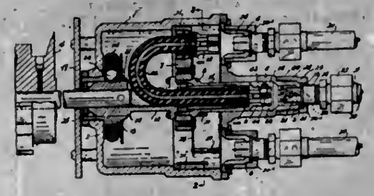
Julius Bergren, Minneapolis, Minn., assignor to Joseph A. Bousquet

Application July 13, 1946, Serial No. 683,383

2 Claims. (Cl. 43—42.3)

1. In a device of the class described, an elongated shank terminating in an eye at one end and a plurality of circumferentially-spaced radially-extended hooks at the other end, and a plurality of resilient weed-deflecting fingers operatively anchored to said shank adjacent said eye, said fingers diverging outwardly with respect

to the shank to a point intermediate their ends to collectively form a protective cage radially outwardly of the points of the hooks, the free ends of said fingers extending axially beyond the barbs and conforming substantially to the contour of the hooks.



2,473,565

SWITCH

James Raymond Bird, Chagrin Falls, Ohio, assignor to Bird Electronic Corporation, Cleveland, Ohio

Application October 9, 1946, Serial No. 702,303

5 Claims. (Cl. 200—4)

1. A coaxial cable switch comprising a housing, a rotor mounted within said housing for rotative movement about a fixed axis, spaced members carried by said housing and adapted to receive the ends of coaxial cable connectors, coaxial conductor means carried by said rotor connecting said spaced members, said coaxial conductor means being of uniform cross-section throughout and so arranged as to maintain through the switch the characteristic impedance of the coaxial cables attached thereto and means to rotate the rotor and move it axially.

2,473,566

SELF-REVERSING POWER JACK

Bryan Brassell, Santa Rosa, N. Mex.

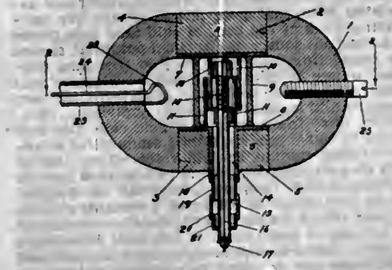
Application April 4, 1946, Serial No. 659,595

18 Claims. (Cl. 74—25)

1. In mechanism for converting rotary motion to reciprocating linear motion, the combination which includes, motion converting means comprising at least two engaging threaded members mounted for relative rotation and co-action to produce linear displacement of one of them, gearing means connective with said threaded members

for transmitting opposite driving rotation to the same to direct the displacement, and means con-

trolled by movement of said member to reverse the direction of rotation of both said members.



2,473,567

ELECTRONIC DISCHARGE DEVICE

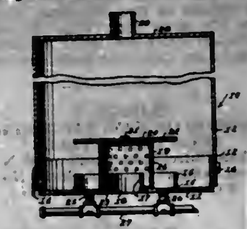
William C. Brown, Lincoln, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware

Application March 20, 1945, Serial No. 583,787

9 Claims. (Cl. 250—27.5)

1. An electronic discharge device for generating ultra-high frequency oscillations comprising an evacuated envelope, a cathode and a plurality of anode elements enclosed in said envelope, a hollow body of magnetic material defining an enclosed space surrounding said envelope and completing oscillatory circuits between said anode elements, said hollow body imposing a magnetic field extending transversely to the direction of electron flow through the space between said cathode and said anode elements, and means in the space surrounding said envelope for tuning said oscillatory circuits.

2,473,568



TRAY TYPE LIQUID FUEL BURNER

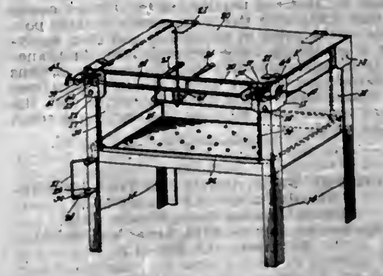
Kyle C. Caldwell, Knoxville, Tenn.

Application January 12, 1948, Serial No. 1,792

1 Claim. (Cl. 126—93)

An oil burner of the type described, comprising a circular heating plate, an upstanding flange on said plate, a heat jacket engaging said flange, means for removably securing said jacket to said flange, a central air intake opening in said plate, an oil ring surrounding said opening, a mixing tube having a closed top and open bottom surrounding said oil ring in spaced relation thereto and resting on said plate, an outer oil ring surrounding and spaced from said mixing tube, fuel oil inlet pipes connected to said plate intermediate said mixing tube and said outer oil ring, a de-

flector plate secured to and overlying the top of said mixing tube, staggered rows of air and gas mixture outlet openings in said mixing tube and said mixing tube being scalloped on the bottom edge to permit inward flow thereunder of some of the oil from the inlet pipes.



2,473,569

PORTABLE HEAT-ADJUSTING CHARCOAL STOVE

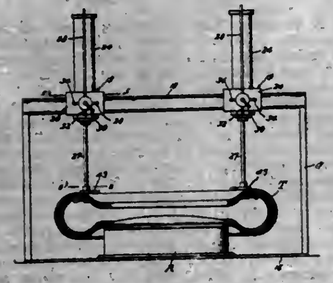
Don T. Cast, Columbus, Ohio

Application August 18, 1947, Serial No. 769,186

5 Claims. (Cl. 126—9)

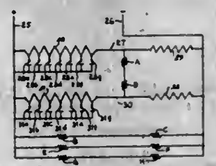
1. A portable heat adjusting charcoal stove comprising a frame, corner pieces attached to said frame, pairs of legs pivoted to said corner pieces and adapted to fold beneath the frame one pair within the other, a vertically adjustable fuel pan slidably mounted beneath said frame and adapted to be moved upwardly thereagainst prior to the infolding of said pairs of legs, a top plate hinged to said frame at its rear edge and having a handle extending from its forward edge, said handle having a cross-bar and angularly offset portions, and a second cooperating handle swivelly carried by one of the legs of the last mentioned folded pair of legs adapted to be swung over the first mentioned handle and seat behind said angularly offset portions when said last mentioned pair of legs is folded whereby the stove as a compact unit may be carried by one handle.

5. A portable heat-adjusting charcoal stove comprising a stove top, pairs of legs pivoted to said stove top for supporting said stove top and being foldable one pair within the other, a fuel pan movable up and down between said legs, flexible connections for supporting said fuel pan, a shaft having sections upon which said flexible connec-



tions are wound, bearing supports on the stove for rotatably receiving said shaft, said shaft being slidable axially through said bearing supports, a crank handle for rotating said shaft, a stationary keeper supported by said stove in position to be engaged by said crank handle when said shaft is shifted axially in one direction, and casings carried by the stove top along the side edges thereof through which certain of the flexible connections move on their way from the pan to the shaft.

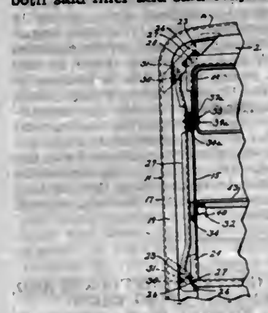
2,473,570
METHOD OF MANUFACTURING ATTACHMENT PLUGS
Nathan Chireistein, Maplewood, N. J.
Application January 22, 1946, Serial No. 642,729
3 Claims. (Cl. 29—155.55)



1. The herein disclosed method of manufacturing electrical attachment plugs which comprises providing an insulating cap having a central cord passage and longitudinally extending blade-receiving seats at opposite sides of the same and contact blades having straight, flat end portions of greater transverse width than the transverse width of said seats, transversely buckling said greater-width end portions of the blades to less overall transverse width than the transverse width of said seats, entering said transversely reduced buckled end portions of two blades loosely in said seats with the transversely buckled portions of the same in opposition and then applying a spreading force between and simultaneously to said oppositely disposed bowed portions to flatten and thereby spread said bowed portions to substantially the original flat width with the edges transversely gripping the transverse edges of the seats.

2,473,571
FLUID PRESSURE ACTUATED TIRE MOUNTING OR DEMOUNTING DEVICE
Milford Marcluse Cook, Visalia, Calif.
Application July 24, 1945, Serial No. 606,734
2 Claims. (Cl. 157—1.2)

1. A tire-mounting and removing device which includes a platform, a pair of spaced standards at opposite sides of the platform, a tire and rim assembly support on the platform between the standards, a pair of spaced parallel horizontally disposed guide beams supported by the standards adjacent their upper ends, a pair of carriages movable along the guide beams, a cylinder and piston assembly carried by each carriage, each such latter assembly having its piston rod operable downwardly between the guide beams, and feet on the lower ends of the piston rods adapted to be advanced or retracted with relation to the tire assembly support according to the direction of movement of the pistons.

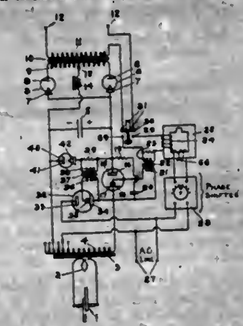


2,473,572
MAGNETIC SERVO OPERATOR
Nelson D. Cooper, Mariemont, and Eugene A. Euchty, Norwood, Ohio, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Application December 11, 1946, Serial No. 715,360
5 Claims. (Cl. 318—25)

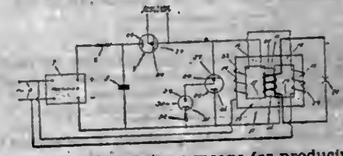
3. A magnetic servo operator comprising a frame, a rock shaft journaled in said frame, a rotor fixed on said rock shaft, a series of pole pieces, field coils around said pole pieces, pole pieces on said rotor, field coils on said rotor associated with said pole pieces, means for connecting some of the coils of said field pole pieces to a constant source of electrical potential, means for connecting said rotor coils to the same constant source of electrical potential whereby said rotor is normally held in a predetermined zero position, and means for variably applying electromotive force to other of said field coils and pole pieces to cause predetermined amounts of angular rocking motion in said rotor either side of said zero position comprising two pairs of serially interconnected resistors connected in parallel across said source of potential, a variable resistor contact device for each of the resistors connected to one side of said source of potential including a series of contacts connected to said one side and simultaneously operated to progressively engage said contacts to increase one of said resistors while decreasing the other of said resistors and means for connecting said other field coils across said pairs of resistors at points between the resistors of each pair.

2,473,573
REFRIGERATOR LINER SUPPORT
George E. Curtiss, Jr., Penn Wynne, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application April 10, 1946, Serial No. 660,976
4 Claims. (Cl. 62—89)

1. A refrigerator cabinet construction comprising a substantially rectangular open front casing, a substantially rectangular open front inner food compartment liner disposed within said casing in spaced relation therewith, an evaporator disposed within said liner, a support positioned in each corner of said casing, means for securing the corner portions of said liner to said members in thermally non-conductive relation therewith, liner support means carried by said members, and apparatus connecting said support means in thermally non-conductive relation with both said liner and said evaporator for supporting said liner and said evaporator within said shell.



2,473,574
ROLLING TOY
Joseph Davis, Arlington, N. J., assignor to Joseph Davis Plastics Co., Arlington, N. J., a corporation of New Jersey
Application January 15, 1948, Serial No. 2,501
4 Claims. (Cl. 46—49)

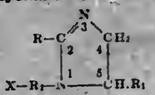


1. A roll toy comprising a closed hollow transparent shell body having oppositely disposed internally concave ends therein, a longitudinally and axially balanced rotor having ends of relatively small diameter, said rotor being of substantially less mass than the shell body, and of less length than the maximum axis line between said oppositely disposed concave ends so as to have its small diameter ends rest within and freely roll on said oppositely disposed concave ends below said maximum axis line, the maximum radius of said rotor at any point between its ends being less than the distance from its axis to the shell body at that point so as to permit the rotor to freely rotate, said rotor including colored vanes secured thereto and visible through the transparent shell body, said shell body including means upon which it can roll about said maximum axis line whereby said shell body may be rolled to cause visible rotation of the rotor at a greater rate of rotation than said shell body.

2,473,575
RESISTANCE WELDING SYSTEM
John W. Dawson, Auburndale, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application February 21, 1940, Serial No. 320,079
25 Claims. (Cl. 219—4)

1. A welding system comprising an electrical energy storage device, means for supplying storage energy to said storage device, a welding load, means for discharging the energy stored in said storage device into said load, a source of power capable of supplying energy to said load without substantial effect on the voltage of said source, and means for connecting said source to said load upon substantial discharge of said storage device.

2,473,576
WELDING SYSTEM
John W. Dawson, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 2, 1945, Serial No. 597,249
6 Claims. (Cl. 323—58)

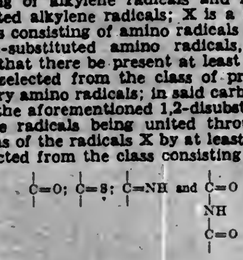


1. In a welding system: means for producing a current pulse having a substantial direct-current component; a load circuit adapted to be energized by said current pulse; said load circuit including a transformer having a core comprising a frame portion, and a shunt portion bridging said frame portion whereby said core defines a plurality of magnetic paths; said shunt portion being provided with a primary winding connected across said current-producing means to establish unidirectional fluxes through magnetic paths including said shunt portion and said frame portion and a secondary winding superimposed on said primary winding and adapted to be connected across a resistance-welding load; said frame portion being provided with a tertiary winding adapted to be connected across a source of alternating current to establish alternating fluxes through magnetc paths including said frame portion but excluding said shunt portion.

2,473,577
CARBONIC ACID AMIDES OF CERTAIN SUBSTITUTED GLYOXALIDINES
Melvin De Groote, University City, and Bernhard Keiser, Webster Groves, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
No Drawing. Application May 28, 1945, Serial No. 596,393
8 Claims. (Cl. 260—309.6)

1. A member of the class of compounds consisting of substituted carbamyl compounds con-

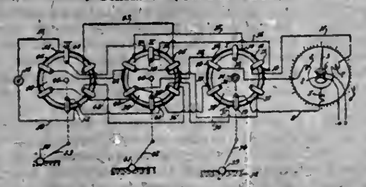
taining at least 2 glyoxalidine radicals; said glyoxalidine radicals being the radical of a 1,2-disubstituted glyoxalidine of the structure



wherein

is the residue of the acyl radical RCO of a detergent-forming monocarboxy acid having at least 8 and not more than 32 carbon atoms; in which the residue

is obtained by elimination of the carbonyl oxygen atom from the acyl radical RCO; R_1 is a member of the class consisting of hydrogen atoms and lower alkyl radicals; R_2 is a member of the class consisting of alkylene radicals and lower alkyl substituted alkylene radicals; X is a member of the class consisting of amino radicals and amino alkylene-substituted amino radicals, with the proviso that there be present at least one amino radical selected from the class of primary and secondary amino radicals; in said carbamyl compound, the aforementioned 1,2-disubstituted glyoxalidine radicals being united through amino nitrogens of the radicals X by at least one member selected from the class consisting of the



radicals.

2,473,578

TOTALIZER

Abraham Edelman, New York, N. Y., assignor to The Liquidometer Corporation, Long Island City, N. Y., a corporation of Delaware

Application April 3, 1945, Serial No. 586,410
7 Claims. (Cl. 177—351)

1. An electrical telemetering system for setting a single receiving instrument in accordance with the total of a plurality of individual physical magnitudes which are respectively arranged to control the positions of movable members of transmitters, comprising a plurality of transmitters connected to be responsive to said physical magnitudes respectively, each of said transmitters including an electrically endless resistance, and a member having a plurality of electrically separate contactors engaging predetermined different points along said resistance, means for relatively moving said resistance and said contactors in accordance with the physical magnitude arranged for controlling each of said transmitters respectively, said transmitters being arranged in a series from a first transmitter to a last transmitter, a source of E. M. F. electrically connected to predetermined points of the resistance of one of said transmitters, a plurality of electrical connections from each of said transmitters to the next in said series, said connections extending between said contactors of one of said transmitters and points along the resistance of the next transmitter in said series, which points are located at positions respectively corresponding to said contactors; a receiving instrument having a rotor and at least three stationary deflecting coils; and electrical connections from the last transmitter of said series to said deflecting coils of said receiver for controlling the position of said rotor in accordance with the total of said physical magnitudes.

2,473,579

FOAMING-TYPE GALVANIZING FLUXES AND PROCESSES EMPLOYING THEM

Lowell D. Eubank, Richland, Wash., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 4, 1945, Serial No. 571,374
10 Claims. (Cl. 148—23)

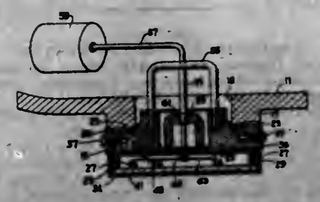
1. A foaming-type galvanizing flux comprising a fluxing agent, selected from the group consisting of ammonium chloride and zinc ammonium chloride, and from 0.1 to 1.0% by weight of an organic compound having from one to two aromatic, carbocyclic, 6-membered rings directly joined to two carbonyl substituent groups.

2,473,580

FOAMING GALVANIZING FLUXES AND PROCESSES EMPLOYING THEM

Lowell D. Eubank, Richland, Wash., and Charles J. Krister, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 11, 1945, Serial No. 572,420
10 Claims. (Cl. 148—23)



1. A foaming-type galvanizing flux comprising a fluxing agent, selected from the group consisting of ammonium chloride and zinc ammonium chloride, and from 0.1 to 1.0% by weight of an organic compound having an aromatic, carbocyclic, 6-membered ring to which are directly joined from 2 to 3 substituents selected from the group consisting of hydroxy, amine, and amine-substituted phenyl groups.

2,473,581

INDICATING INSTRUMENT WITH MAGNETIC DRIVE

George E. Ford, Brighton, N. Y.

Application December 4, 1945, Serial No. 632,663
9 Claims. (Cl. 177—327)

2. An indicating instrument including a relatively thick base member having a plurality of

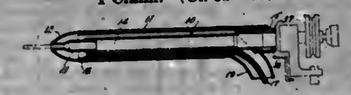
openings therethrough near the margins thereof and having an imperforate central portion, said openings each having a larger diameter at its front than at its rear end and being adapted to receive screw threaded fastening elements inserted from the front of said base member for mounting said member on a support, magnetic driving means mounted on said base member on the rear of said imperforate portion, a case member removably mounted in front of said base member, a transparent plate positioned in front of said case member, magnetically responsive indicating means mounted within said case member, and a bezel surrounding and retaining said transparent plate and case member, said case member and bezel together overlying and hiding said openings, said bezel having portions extending rearwardly in external overlapping and embracing relation to the lateral edges of said thick base member to support said bezel from said base member.

2,473,582

CARTON FOR RADIO TUBES AND THE LIKE

Vernon D. Goodwin, Floral Park, N. Y., assignor to Sylvania Electric Products Inc., Emporium, Pa., a corporation of Massachusetts

Application June 18, 1946, Serial No. 677,491
1 Claim. (Cl. 229—6)



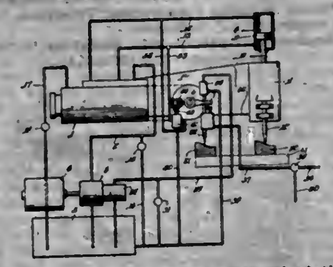
A blank for forming a holder of the type described comprising a single elongated oblong strip of cardboard which has a pair of parallel folding crease lines extending transversely of the strip determining the length of one side wall of the finished holder, the portion of the strip between one of said crease lines and the shortest end of the strip being provided with a transverse folding crease line dividing said portion into two panels, the first of which forms the end wall of the finished holder and the second or end panel forms a part of the other side wall of said finished holder, said end panel being provided with a tongue at its extreme end for locking with a corresponding slit and with a gummed portion near its folding crease line for gluing with the other end of said blank, the strip at the other end of said crease lines being divided into six panels by five transverse crease lines with the first, third and fifth panels of substantially the same length as the panel forming the end wall of the finished holder, the combined length of panels 2, 4 and 6 being substantially equal to that of the side wall of the finished holder, said fourth panel being provided with a gummed surface for gluing to said first named side wall of the finished holder, said second and third and fifth and sixth panels being provided with substantially symmetrical, longitudinal slits which when pushed out form cradling straps in the finished holder, said straps being provided with transverse lines to facilitate pushing out and shaping of said straps, said end panel having a length greater than the combined length of said fourth and sixth panels whereby the tongue in the finished holder will lock in the slits provided in the second and third panels.

2,473,583

DENTAL DRILL

Max Francis Grögl, Barranquilla, Colombia
Application August 14, 1947, Serial No. 768,551
In France August 14, 1946

1 Claim. (Cl. 32—28)



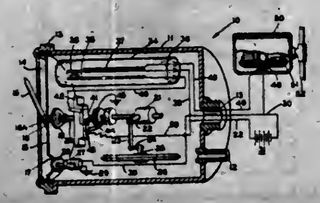
A removable attachment for a dental handpiece, comprising an inner tubular casing, an outer tubular casing concentric with the inner casing and spaced therefrom, an outer protecting sleeve mounted on the outer tubular casing, a tapered cap mounted on the lower end of the outer tubular casing, an inner tubular chuck connecting the lower end of the inner casing with the lower end of the cap, thereby providing an expansion chamber in the lower end of the attachment, a connector for spacing the upper ends of said outer and inner casings and providing means for connecting the attachment to the handpiece, said outer casing having a return connection adjacent the upper end thereof, and a refrigerant supply tube positioned between the inner and outer casings, whereby a refrigerant may be conveyed through the supply tube into the expansion chamber at the lower end of the attachment, and said refrigerant may be withdrawn, after expanding, through the return connection adjacent the upper end of the attachment.

2,473,584

TRACER MECHANISM FOR MACHINE TOOLS

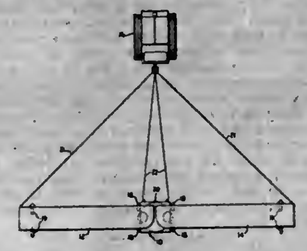
Elmer E. Hallberg and Joseph C. Verstynen, Rockford, Ill., assignors to Rockford Machine Tool Company, Rockford, Ill., a corporation of Illinois

Application November 3, 1944, Serial No. 561,762
14 Claims. (Cl. 90—24.3)



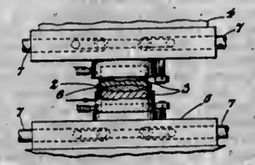
1. In a machine tool having a pair of relatively movable slides with a tool and tracer carried by one slide and a work-piece and pattern carried by the other slide, a cylinder and piston device operable to move the tool slide toward and from the work, a valve with conduits leading therefrom to opposite ends of the cylinder, respectively, said valve being movable in response to the tracer in either direction from a neutral position for directing pressure fluid selectively to one end of the cylinder or to its opposite end, by-pass means operable automatically to reduce the effective pressure applied to the cylinder, and means connected to the tracer-operated valve effective to actuate said by-pass means when the movement of the tracer-operated valve exceeds a predetermined range from its neutral position.

2,473,585
SALT AND PEPPER SHAKER
Ray D. Harwood, Elkhart, Ind.
Application February 9, 1946, Serial No. 646,635
6 Claims. (Cl. 65—45)



5. A dispensing device for dispensing separately salt and pepper or the like comprising, in combination, a hollow holder for salt, a hollow holder for pepper, the pepper holder being carried by wall means of the salt holder and being adapted to be reciprocated therein, cooperating passageways in the holder members which, when in alignment, permit salt to be dispensed therethrough to the exterior of the device, and another passageway in the pepper holder for dispensing pepper, said other passageway being blocked by said wall means when the two holders are aligned in salt dispensing position, and said pepper holder being slidable to a pepper dispensing position wherein said other passageway is unblocked from said wall means of the salt holder and the passageway of the salt holder is blocked by the wall of the pepper holder.

2,473,586
CABIN ALTITUDE AND OXYGEN USE INDICATOR
Norman F. Hosford, Towaco, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application April 13, 1946, Serial No. 20,783
10 Claims. (Cl. 177—311)

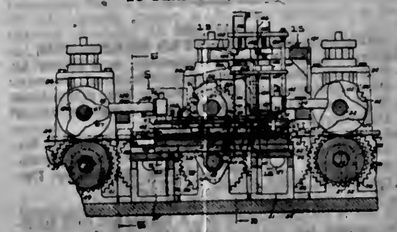


2. An oxygen requirement indicator for use with an oxygen regulator, comprising a pressure responsive member subjected to the ambient pressure of an aircraft cabin, a dial, a pointer cooperating with said dial and driven by said member to indicate cabin pressure, a switch operable by said member when the cabin pressure reaches a predetermined value, a warning signal operable upon operation of said switch, a blinker switch intermittently operable by the flow of oxygen through the regulator to extinguish said signal, and a second switch operable at a lower predetermined pressure by said member to operate said warning signal despite the operation of said blinker switch.

2,473,587
HARVESTER FOR PACKING LETTUCE, CABBAGE, CELERY, AND THE LIKE
Charles E. Huston, San Marino, Calif.
Application November 26, 1946, Serial No. 712,302
9 Claims. (Cl. 214—83.1)

1. A packer for crops comprising a wheeled vehicle, elongated horizontal wings having one end of each pivotally secured to the vehicle, said wings having packing positions extended end to end laterally from the vehicle and wheeled supports adapted to support the wings in the furrows, said wings having inoperative parallel positions extending behind the vehicle adapted to facilitate transportation of the packer on a highway.

2,473,588
METHOD OF MOLDING LENSES AND LIKE OPTICAL ELEMENTS
John Johnson, Slough, England, assignor to Combined Optical Industries Limited, Slough, England, a British company
Application November 23, 1944, Serial No. 564,734
In Great Britain September 6, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 6, 1963
2 Claims. (Cl. 18—47.5)



1. The method of moulding optical elements of varying thickness from transparent organic thermoplastic materials, which comprises removing material from a blank of such material by mechanical operations to preform it to a shape closely approximating that which the finished element is to have, subjecting the same for a short period to the application of heat approximately uniformly over the whole surface thereof at a temperature in excess of the temperature at which such material softens and will flow under pressure, so as to soften the outer layer only of the blank to a substantially uniform thickness, while leaving the remainder of the blank below such softening temperature, such remainder being of a non-uniform thickness which in parts is considerably greater than the thickness of said surface layer, moulding the blank between optically-accurate dies and abstracting heat from the moulded element, approximately uniformly over the whole moulded surface thereof, to cool the same under pressure, to cause the same to set.

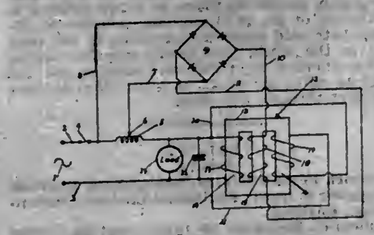
2,473,589
HEATING AND COOLING SYSTEM FOR HORTICULTURAL HOUSES AND CLOCHES
Eric Goddard Johnson, Spalding, England
Application May 31, 1945, Serial No. 596,957
In Great Britain June 9, 1944
3 Claims. (Cl. 219—39)

1. A combined heating and cooling system for the air in a horticultural enclosure, comprising a panel and means for supporting the same in the upper part of such an enclosure, a casing above said panel adapted to project to form an air intake, an electric motor on said panel, a fan on the shaft of said motor, an electric heater, means for supplying electric current to said motor and said heater, and thermostatic controlling means having electrical contacts for completing an electrical circuit including said motor and heater, said thermostatic controlling means normally maintaining said circuit open and adapted to switch both said heater and said motor into circuit when the temperature in said enclosure falls below a predetermined lower level, a valve and electro-magnetic means for operating the same for controlling the entry of external air through said casing, and a second thermostatic controlling means having electrical contacts for completing an electrical circuit including said motor and electro-magnetic means, said second controlling means normally maintaining said circuit open and adapted to operate to close the circuit of said motor and said electro-magnetic valve controlling means, when the temperature in said enclosure exceeds a certain higher level, whereby, when the temperature in said enclosure falls below said predetermined lower level, said heater and said fan are operated to circulate warmed air, and, when the temperature in said enclosure exceeds said higher level, the fan is operated to circulate air from outside within said enclosure.

2,473,590
METHOD AND APPARATUS FOR ASSEMBLING PARTS
Homer G. Kellogg, Highland Park, Mich., assignor to Motor Products Corporation, Detroit, Mich., a corporation of New York
Application November 18, 1946, Serial No. 710,525
13 Claims. (Cl. 1—1)

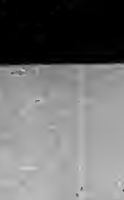
1. An assembly fixture comprising means for advancing stock along a predetermined path of travel, a punch supported to one side of the path of travel of the stock for movement toward and away from the stock, a rivet carrying part movable relative to the punch in the direction of advancement of the stock to register a rivet with the punch, means operating in timed relation to movement of the rivet carrying member to advance both said member and punch at the same rate as the stock, and means operable during advancement of the punch and member with the stock to move the punch in a direction to force the rivet through the stock.

2,473,591
VALVE
Frederick Edward Killner, Cheltenham, England, assignor to Dowty Equipment Limited, Cheltenham, England
Application November 16, 1943, Serial No. 510,502
In Great Britain November 17, 1942
3 Claims. (Cl. 251—144)



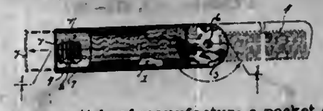
3. Valve insides comprising a axially bored body formed for removable securement within a valve stem, its bore terminating at its inner end in an inwardly directed cup defining generally cylindrical walls constituting a valve seat, but flared at its entrance, and defining also an inwardly facing annular shoulder, a valve spindle of a length to project entirely through and loosely guided within the bore, and shouldered at its inner end to seat upon said shoulder of the bore's cup, stop means formed as spacers intermediate and to limit approach of said two shoulders, for access of pressure to the entire area of the spindle's shoulder, resilient means biasing said spindle shoulder towards the cup's shoulder, and an elongated annular valve of resiliently compressible material received upon said spindle, inwardly of the latter's shoulder, of radial dimensions somewhat exceeding those of the inside valve seat area of the cup, whereby as it enters and seats with increasing peripheral area upon the walls of the cup, it is increasingly compressed therewithin.

2,473,592
ALTERNATING CURRENT PULSER CIRCUIT
Hans Klemperer, Belmont, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application January 25, 1946, Serial No. 643,422
4 Claims. (Cl. 323—89)



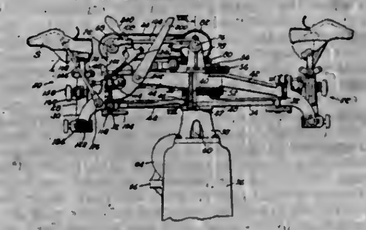
1. An alternating current pulser, comprising a source of alternating current, capacitive means connected across said source, a saturable-core reactor having a control winding and an alternating current winding, means connecting said alternating current winding across said source,

said capacitive means and the inductance of said alternating current winding constituting a parallel circuit resonant at the frequency of said source when the core of said reactor is substantially saturated and said circuit being capable of



being brought into and out of resonance by variation of the current flowing through said control winding, an impedance connected in series with said parallel circuit, and means responsive to the current flowing through said impedance for supplying control current to said control winding.

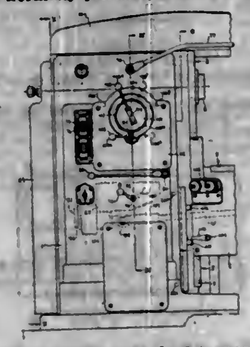
2,473,593
NECKTIE AND HOLDER ASSEMBLY
Kenneth A. Lambrechts, St. Louis, Mo.
Application April 4, 1947, Serial No. 739,295
2 Claims. (Cl. 2—153)



2. A necktie and holder assembly in which the holder and the necktie each consist of two separate parts, the two parts of said holder being of similar inverted, truncated conical conformation and adapted to be engaged one within the other, the outer of said parts having a longitudinal cut-out portion and inwardly extending flanges at the edges of said cut-out portion, the inner of said parts being bent longitudinally to provide an outer section and an element parallel therewith, said outer section and said element being spaced apart, said inner part of said holder having an opening in registration with the cut-out portion of said outer part and an extension across said opening, one part of said necktie being shaped to conform to the outer surface of the outer part of said holder and having its ends in engagement with the flanges of said outer part, the other part of said necktie having a wide and a narrow portion and an offset separating said wide and narrow portions, some of the wide portion of said tie being gripped between the outer and inner parts of said holder and some of the narrow portion of said tie being gripped between the outer section and parallel element of the inner part of said holder, the entire assembly being held in gripping engagement by said flanges so that said holder and the portions of the necktie engaged therewith comprise the knot of the completed tie.

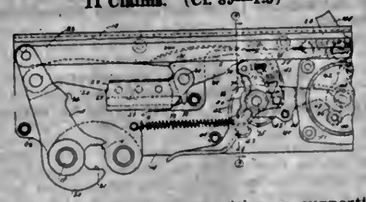
2,473,594
COMBINATION COMB AND TOILET ARTICLE HOLDER
Charles T. La Mont, Milwaukee, Wis.
Application June 23, 1947, Serial No. 756,441
1 Claim. (Cl. 132—15)

As a new article of manufacture a pocket comb or the like, comprising an elongated one piece sheet longitudinally folded upon itself to form an open sided shield, a compartment above the shield having an open mouth at one end, a comb or like article pivoted to one end of the shield, and a friction controlled cover for engaging the mouth of said compartment, the same being adapted to house various toilet articles.



2,473,595
TURRET TYPE LAST PULLING AND RELASTING MACHINE
John T. Lancaster, Newton, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application October 17, 1947, Serial No. 780,381
17 Claims. (Cl. 12—18)

4. In a machine for use in the manufacture of shoes, the combination of a last support movable through a plurality of operating stations, means for moving the last support through said stations, a driven tool at one of said stations operable when driven in one direction to delast a shoe and when driven in the opposite direction to relast a shoe, and means for reversing the direction of drive of said tool to enable a shoe on a last first to be delasted and then, after being carried loose on the last to another station for further operation and returned loose on the last to the station adjacent to the tool, to be relasted.



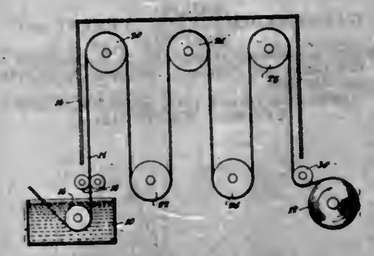
2,473,596
MILLING MACHINE FEED MECHANISM
Richard K. Le Blond, Cincinnati, and Harry C. Kemper, Goshen Township, Clermont County, Ohio, assignors to The R. K. Le Blond Machine Tool Co., Cincinnati, Ohio, a corporation of Delaware
Original application October 14, 1941, Serial No. 414,962, now Patent No. 2,333,121, dated January 4, 1944. Divided and this application December 18, 1943, Serial No. 514,760
9 Claims. (Cl. 90—21)

1. In a milling machine, a rotatable tool spindle, means for driving said tool spindle, spindle clutch means for connecting or disconnecting said driving means relative to said tool spindle, a feed driving transmission constantly driven by said means for driving said tool spindle, work feeding devices adapted to be driven by said change feed transmission, an overload clutch device having a member normally yieldably held in a position to

interconnect said change feed transmission and said work feeding devices, and means for simultaneously disconnecting said spindle clutch means from said tool spindle and actuating said overload clutch device member to disconnect said feed transmission from said work feeding devices.

2,473,597
BOMB SHACKLE AND RELEASE
George H. Leland, Dayton, Ohio
Application September 27, 1945, Serial No. 618,823
11 Claims. (Cl. 89—1.5)

1. A bomb shackle comprising a supporting structure, bomb supporting elements mounted on said structure for movement into and out of supporting positions, means including a movable member for locking said supporting elements in supporting positions, a releasing device to retain said movable member in locking position, spring means for moving said releasing device to releasing position, an arm connected with said releasing device to move the same against action of said spring means to locking position, a retaining member to engage said arm and hold said releasing device against movement by said spring means, and electrically controlled means to move said retaining member out of engagement with said arm and thus permit the movement of said releasing device by said spring means.

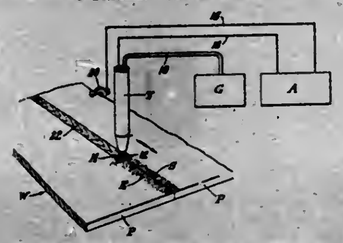


2,473,598
FABRICATED ROTARY SOLENOID
George H. Leland, Dayton, Ohio
Application December 3, 1945, Serial No. 632,530
1 Claim. (Cl. 175—326)

In a rotary solenoid, a casing comprising a circumferential wall, a front wall rigid with said circumferential wall, and a rear wall having a pressed fit in said circumferential wall and having an axial opening, a sleeve mounted in and having a pressed fit in the opening in said rear wall, disks mounted on said sleeve and having a pressed fit thereon, said disks and said rear wall constituting a core, a shaft rotatably mounted in said sleeve and extending forwardly beyond the same, an armature comprising disks mounted on and having a pressed fit on said shaft, a plate

rigidly mounted on said shaft in opposed relation to said front wall, a magnetizing coil mounted in said casing about said core to energize the latter and impart axial movement to said armature, means interposed between said plate and said front wall and controlled by the axial movement of said plate by said armature to impart rotary movement to said armature, and means for rotating said shaft and said armature in a reverse direction when said core is deenergized.

2,473,599
CHANGE OF DIRECTION ROLLERS
Robert A. Liebel, Allentown, Pa.
Application January 12, 1946, Serial No. 640,805
4 Claims. (Cl. 74—241)



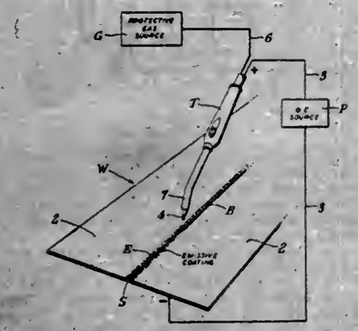
1. The change of direction assembly comprising two supporting rollers for strip material to be passed and flexed continuously thereover, a narrow face on each roller, guide members for restricting lateral movement of the strip, means mounting the rollers rotatably on the same axis and at a distance apart of the faces of the rollers approximately equal to the width of the strip material to be sent thereover so that an edge of the strip material normally rests upon each of the faces, the said guide members being flanges extending from the outer ends of the supporting rollers and each of the said faces having a tapered portion that slopes inwardly on the edge of the face remote from the said flange and serves as a guide and remounting member so as to return the edge of the strip material to the part of the face of the roller of full diameter when the material is temporarily disengaged from the face.

2,473,600

COATING WORK WITH AN ELECTRON-EMISSIVE MATERIAL TO IMPROVE INERT GAS-SHIELDED REFRACTORY-ELECTRODE ALTERNATING CURRENT ARC WELDING

Roscoe R. Lobosco, Elizabeth, N. J., assignor to The Linde Air Products Company, a corporation of Ohio

Application July 26, 1945, Serial No. 607,219
5 Claims. (Cl. 219—10)



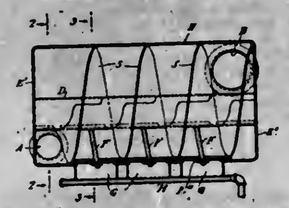
1. A method of welding metal without flux which comprises coating the work to be welded with an electron emissive material composed of an alkaline earth metal, positioning a substantially non-consumable electrode adjacent such work, surrounding the electrode and the space between said electrode and the work and the zone to be welded with an inert monatomic gas, striking an alternating current welding arc between said electrode and the work, and advancing said electrode along the zone to be welded so as to cause such arc to fuse the work in the welding zone under such gas.

2,473,601

GAS SHIELDED DIRECT-CURRENT ARC WELDING

Roscoe R. Lobosco, Elizabeth, N. J., assignor to The Linde Air Products Company, a corporation of Ohio

Application June 8, 1946, Serial No. 675,351
3 Claims. (Cl. 219—10)



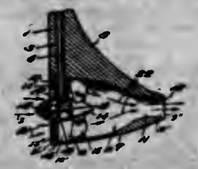
1. The method of welding metal by the electric arc process which comprises thinly coating the surface of the metal along the zone to be welded with a very thin film of material that is highly emissive of electrons when heated, such film being applied prior to the application of the arc, and fusing the metal by a direct current welding arc maintained between the metal and a refractory electrode in a protective atmosphere of gas which is chemically inert with respect thereto, the polarity of the metal being negative and that of the electrode positive.

2,473,602

FLUID SEPARATOR

Jean Loumiet et Lavigne, Playa de la Teja, Itabo, Cuba

Application April 25, 1945, Serial No. 590,170
4 Claims. (Cl. 183—79)



1. In a fluid separator, a cylindrically shaped separator casing closed at its ends and having an inner cylindrical wall surface, an inner structure within the separator casing and cooperating with the inner wall surface thereof to provide a spiral fluid path of varying cross-section, an inlet for the mixed fluid at one end of the casing and an outlet at the other end of the casing for discharging the less dense fluids, and an outlet for extracting from the casing the dense fluid particles separated from the less dense fluid, said outlet being provided through the separator external casing at a point in the fluid path about 60° beyond the point of minimum cross-section therein.

2,473,603

MARINE PROPELLER DEVICE

Josef H. Miller, Seattle, Wash.

Application January 15, 1946, Serial No. 641,244
1 Claim. (Cl. 115—16)

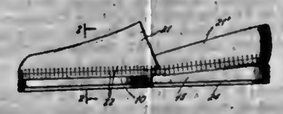
In a marine propelling apparatus, the combination of a horizontally elongated shroud having forward and rear ends and provided with a Venturi-shaped passage, said passage having a forward relatively long region, a rear relatively short region and an intermediate throat connecting said forward and rear regions, the major diameter of said passage being at the forward end of the shroud from which the passage is inwardly tapered throughout the length of said forward region and is reduced to its minor diameter in said throat, said rear region being progressively enlarged in diameter outwardly from said throat and terminating in a flared outlet opening at the rear end of the shroud, said opening being greater than the minor diameter but smaller than the major diameter of said passage, an elongated propeller carrier mounted axially in the front portion of said forward region and projecting forwardly from the shroud, said carrier having a substantially lenticular longitudinal cross section and a rear end portion thereof consisting of a rotatable hub, the outer surface of said carrier including said hub coacting with the tapered wall of said passage to form an annular inlet chamber in the front portion of the forward passage region, and a set of propeller blades provided on said hub and rotatable in said inlet chamber, said blades being disposed closer to the major diameter of said passage than to said throat, and the outer surface of said carrier including said hub being tapered inwardly at a greater rate than the wall of the forward passage region, whereby the radial width of said inlet chamber is progressively increased inwardly from the forward end of said shroud.

2,473,604

PAGE NOTCHING DEVICE

Frank W. Muth, Green Island, N. Y.

Application May 20, 1947, Serial No. 749,281
5 Claims. (Cl. 164—119)



1. A device adapted for cutting a notch in the marginal edge of a book page to facilitate turning said page; said device comprising a cylindrical tubular element having a transversely-extending slot therein adapted to receive the edge of the page to be notched with one of the interior edges defining said slots forming one of the cutting edges of a shear, a second cylindrical element closely but slidably fitted in said tubular element and provided with a cutting edge adapted to cooperate with the cutting edge on said tubular element to form said shear; said tubular element being provided with a longitudinally-extending slot therein, closed at least at one end, and said second cylindrical element being provided with a projection thereon slidable in said slot to prevent relative rotation of said cylindrical elements; and a spring biased normally to hold said cutting edges in spaced relation to each other to allow the edge of said page to be inserted in said transversely-extending slot between said cutting edges.

2,473,605

PLATFORM TYPE SHOE, SLIPPER, OR THE LIKE AND METHOD OF MAKING SAME

Anthony Orlando, Bronx, N. Y.

Application September 19, 1946, Serial No. 698,068
14 Claims. (Cl. 36—19.5)

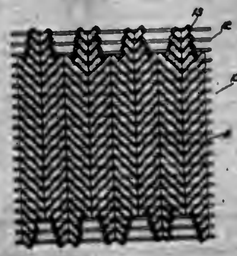
1. Footwear which comprises a platform; a sole-shaped member superposed on the platform; a wrapper having its upper margin adjacent to said member with the edge of said margin inset from the edge of the platform, the wrapper having its lower margin drawn downwardly around the edge face of the platform and turned inwardly and secured to the margin of the lower face of the platform; an outsole secured to the lower face of the platform and the lower face of the inturned part of the wrapper; a foxing strip having its inner margin disposed above the level of the bottom face of said member and superposed upon the upper margin of the wrapper; stitches engaging the platform passing through said member, the lower margin of the foxing strip and the upper margin of the wrapper thereon for securing the margins in superposed position and to hold them to the insole; and an upper member having its lower edge secured to the upper edge of the foxing strip and cooperating therewith to form uppers.

2,473,606

METHOD OF COMPOUNDING ROSIN, ROSIN OIL, AND POLYISOBUTYLENE

Henry N. Padowicz, Livingston, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

No Drawing. Application January 10, 1947, Serial No. 721,482
2 Claims. (Cl. 260—27)



1. The method of compounding rosin, rosin oil and polyisobutylene, which method comprises steps of heating rosin and rosin oil together until a uniform mixture of fluently liquid physical character is obtained, cooling the fluently liquid mixture until it assumes a viscously liquid state, and working polyisobutylene into the viscous liquid until a three component compound of uniform physical state and substantially uniform composition is obtained.

2,473,607

BELTING

Samuel P. Parker, La Grange, Ga., assignor, by mesne assignments, to Callaway Mills Company, La Grange, Ga., a corporation of Georgia

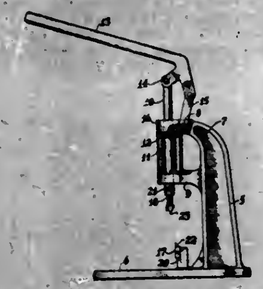
Application September 27, 1946, Serial No. 699,843
4 Claims. (Cl. 139—419)

1. A fabric for use as a reinforcement in belting which comprises a plurality of cables lying side by side and extending lengthwise of the fabric, each cable consisting of a plurality of strands of fibrous textile material twisted together, and cross strands passing between the strands of the individual cables and holding the cables together, the total weight of the cross strands lying between about one-fourth and about three-fourths of the total weight of the cables.

the cable twist of the strands in the cables being defined by the formula

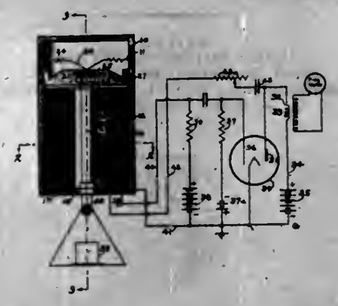
$$T=K\left(\frac{.95n}{p}\right)^{.n}$$

in which



T=turns of twist per inch
n=unit size of the cable strands expressed in the cotton count
p=number of cable strands in each cable, and
K=a constant lying between about 4.6 and about 10.5.

2,473,608
OYSTER OPENING METHOD
John Flock, Southold, N. Y.
Application September 24, 1945, Serial No. 618,122
11 Claims. (Cl. 17—45)

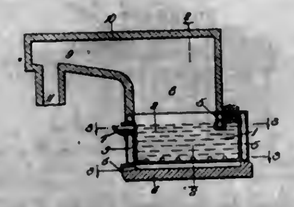


1. The method of opening an oyster which consists in breaking the hinge joint between the valves and then turning one valve relative to the other substantially in the plane of the edges of the valves to separate the body of the oyster from one valve and then severing the adductor muscle from the other valve.

2,473,609
OYSTER OPENING APPARATUS
John L. Flock, Southold, N. Y.
Application January 20, 1946, Serial No. 644,265
3 Claims. (Cl. 17—9)

1. A machine for opening oyster shells comprising a frame having a stationary jaw member constituting an abutment for supporting the outer face of the deep valve of an oyster shell between the ends thereof but leaving a free space alongside of the abutment to allow for the free movement of the shallow valve of the oyster across the face of the deep valve when the latter is supported by the abutment, a movable jaw member having a short prong for engaging the outer face of the shallow valve of the oyster which is supported on the abutment and having a shoulder adjacent said prong for preventing the said movable jaw member from entering between the edges of the shell and means for moving the movable jaw member against the outer face of the shallow valve when the shell is supported between the ends of the shell and thereby moving the shallow valve across the inner face of the deep valve and tearing the adductor muscle from the deep valve without entering between the valves.

2,473,610
BAROMETER
Frank Rieber, New York, N. Y., assignor to Interval Instruments, Inc., New York, N. Y., a corporation of New York
Application January 29, 1944, Serial No. 520,201
9 Claims. (Cl. 250—36)

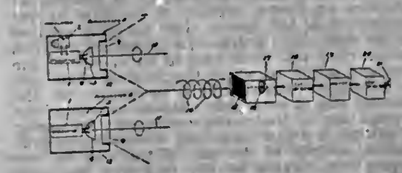


5. A device of the character described, comprising a hermetically sealed chamber having a diaphragm wall carrying a wire support, a wire connected to said support, a second support for the other end of said wire adapted to maintain said wire under tension whereby variations in pressure upon the diaphragm vary the tension upon the wire, an insulator, an electrode carried by said insulator parallel to said wire, and of substantially the same length as the vibrating portion of the wire, a terminal for said electrode, means for applying external fixed weights to said diaphragm whereby the tension exerted on said wire by said diaphragm is altered by a fixed and constant amount, stops to limit the movement of said diaphragm wall, a magnet establishing a field of force transverse to the plane of said electrode and said wire, and an oscillator connected to said electrode, and having the pulsating current it generates connected to pass through said wire, said oscillator including an electric circuit containing said electrode and said wire as a capacity, and means responsive to changes in said electric circuit due to changes in capacity to control said oscillating system.

2,473,611
PROCESS FOR THE PRODUCTION OF ZINC
Stanley Robson, Bedland, Bristol, England, assignor to The National Smelting Company Limited, London, England, a British company
Application June 5, 1947, Serial No. 752,648
In Great Britain June 5, 1946
3 Claims. (Cl. 75—86)

1. A process for the production of metallic zinc from roasted ores, slags and other zinciferous materials which comprises reducing the zinciferous material at an elevated temperature sufficient to produce metallic zinc vapor in a non-

oxidizing gaseous atmosphere substantially free from carbon dioxide by blowing into a molten slag bath of the zinciferous material a blast of carbonaceous fuel suspended in an oxygen-containing gas comprising not less than 40% by volume of oxygen and the balance essentially inert gas substantially free from carbon dioxide, the



molecular proportion of carbon to oxygen in the blast being greater than two so that carbon is always present in sufficient excess in relation to the oxygen supply in said blast to preclude the existence in the zinc vapor-containing atmosphere of any substantial quantity of carbon dioxide, and condensing the resulting zinc vapor.

2,473,612
TRIALKYL PHENYL PHOSPHATES FROM PURIFIED PETROLEUM ALKYL PHENOLS
Royal L. Shuman, Newark, N. J., assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Original application March 4, 1944, Serial No. 525,103. Divided and this application December 12, 1946, Serial No. 715,625
2 Claims. (Cl. 260—461)

1. Trialkyl phenyl phosphates prepared by reacting with phosphorus oxychloride alkyl phenols obtained from petroleum, and stabilized and purified by reacting the alkyl phenols free from water with anhydrous aluminum chloride at an elevated temperature and subatmospheric pressure, and then distilling the reaction mixture to obtain the alkyl phenols as distillates, said trialkyl phenyl phosphates being characterized by having improved electrical resistance, higher viscosities, lower toxicity and lower density than phosphoric acid esters made from coal tar alkyl phenols.

2,473,613
COMMUNICATION SYSTEM
Charles G. Smith, Medford, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application July 9, 1942, Serial No. 450,275
3 Claims. (Cl. 250—6)

1. The method of communication which comprises producing a plurality of circularly-polarized waves, the polarization of each of said waves being in the opposite sense to the polariza-

tion of another of said waves, propagating said circularly-polarized radio waves to a common point in space whereby they interfere in space to produce a resultant plane polarized wave, causing the frequency of said circularly-polarized waves to differ from each other whereby the plane of polarization of the resultant wave is continuously rotating, and signaling by varying the frequency of said circularly polarized waves relative to each other to thereby vary the rate of rotation of the plane of polarization of the resultant wave.

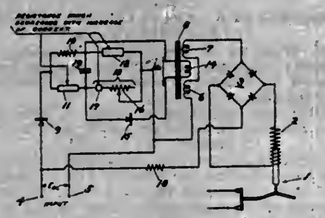
2,473,614
METHOD OF AND MATERIAL FOR PROTECTING AND CONDITIONING METAL SURFACES
Eugene Snyder, Philadelphia, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware
No Drawing. Application December 13, 1945, Serial No. 634,891
7 Claims. (Cl. 148—6.15)

1. A material for use in treating a surface of metal from the group consisting of iron, zinc, aluminum and of iron-base, zinc-base and aluminum-base alloys, the principal active ingredients of which material consist of an intimate admixture of degras and orthophosphoric acid together with a liquid vehicle for said admixture, the quantity of orthophosphoric acid being from 1 to 15% by weight of the degras and the quantity of the vehicle being sufficient to obtain intimate incorporation of the degras with the acid.

2,473,615
PROCESS FOR STRETCHING CELLULOSE ACETATE FILAMENTS
Percy Frederick Combe Sowter, Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application March 20, 1945, Serial No. 583,840. In Great Britain March 29, 1944
2 Claims. (Cl. 8—132)

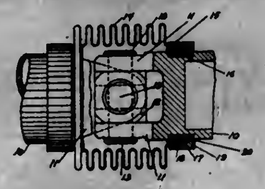
1. Process for reducing the denier without substantially affecting the tenacity and extensibility of artificial filaments having a basis of an acetone-soluble cellulose acetate and having an extensibility of at least 20%, which comprises softening the filaments by means of a mixture containing acetone and benzene at 20 to 25° C. until they become capable of being stretched to at least twist their original length by a tension of 0.1 to 0.5 gms./100 denier, gradually stretching the softened filaments to at least twice their original length, washing the stretched filaments with benzene and drying them, and allowing them to shrink during at least part of the washing and drying operation.

2,473,616
ELLIPTICAL BOUNDARY FRAME FOR OPENINGS IN PRESSURE CABINS FOR AIRCRAFT
Basil Stephenson, Weybridge, England, assignor to Vickers-Armstrongs Limited, London, England
Application January 14, 1947, Serial No. 721,997
In Great Britain January 10, 1946
3 Claims. (Cl. 244—129)



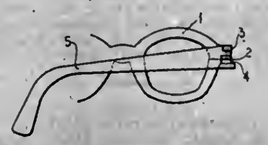
1. A pressure cabin of circular cross section having the window, door and like openings, and the windows, doors and like members relating thereto, of substantially the shape of an ellipse of which the major and minor axes are so proportioned that the ratio of their squares is equal

to the ratio between the circumferential and longitudinal loads per unit width in the shell of the



cabin, and the major axes being disposed circumferentially on the shell.

2,473,617
ELECTRICAL CONTROL SYSTEM
Karl J. Stiefel, Waltham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application October 27, 1944, Serial No. 560,650
2 Claims. (Cl. 175—294)

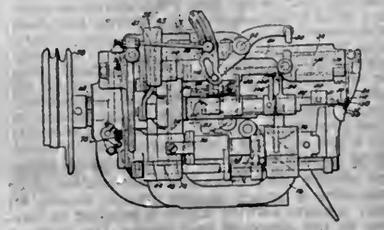


2. In combination, a saturable reactor having a saturable magnetic core, a main winding on said core and adapted to be connected to a source of alternating current, a control winding on said core, a bridge circuit for supplying saturating direct current to said control winding in response to a predetermined condition, said bridge circuit having four arms each including a resistor, two of said resistors having negative resistance current characteristics, another of said resistors having a substantially constant resistance current characteristic, and the fourth resistor having a small component having negative resistance current characteristic, and a large component having substantially constant resistance current characteristic, said resistors being arranged to unbalance said bridge circuit when the current therethrough differs from a predetermined value, a rectifier in series with said control winding whereby said control winding will be energized by unbalance of said bridge in one direction only, an electromagnetic relay having a direct current operating coil connected in series with said main winding, and a rectifier also connected in series with said main winding, whereby said relay is operated in response to the flow of saturating direct current through said control winding.

2,473,618
UNIVERSAL JOINT
George B. Stillwagon, Jr., Dayton, Ohio, assignor of one-half to Kenneth G. Fraser, Dayton, Ohio
Application January 5, 1944, Serial No. 517,019
3 Claims. (Cl. 64—32)

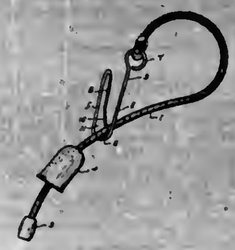
1. A cover for a universal joint of the type comprising coupling members pivotally connected one with the other for movement about intersecting axes, said cover including a tubular structure of resilient metal extending about the pivotal connections between said coupling members, sealing members of yieldable material mounted about and in sealing contact with the respective coupling members and held against axial movement with relation thereto, said cover having end portions overlying said sealing members and having sealing contact therewith, and annular attaching members extending about the respective end portions of said cover in tight engagement therewith, holding said end portions in firm engagement with said sealing members and retaining said sealing members in sealing contact with said coupling members.

2,473,619
SPECTACLES WITH INTERCHANGEABLE LENSES
André Talobre, Oyonnax, France
Application January 6, 1948, Serial No. 719
In France September 16, 1947
1 Claim. (Cl. 88—47)



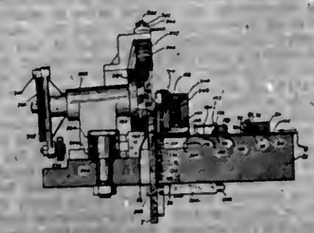
Spectacles adapted to receive interchangeable lenses comprising two rings rigid with one another and the outer lateral web of each of which rings is slotted throughout its breadth for allowing an elastic opening of the ring for replacement of the lenses, sides hingedly secured to the outer webs of the corresponding rings, two bosses rigid with each ring to either side of the slot and to one of which the corresponding side is pivotally secured and a projection on the pivoted end of each side adapted to engage the second boss on the corresponding ring for urging it against the first boss, said second bosses projecting slightly to the rear of the ring for ensuring the locking of the ring over the lens through cooperation with the side for all positions of the side and the release of the lens through the opening of the slot being provided through a slight forward elastic thrust exerted on the corresponding ring.

2,473,620
VALVE
Walter D. Teague, Jr., Alpine, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application December 5, 1944, Serial No. 566,677
4 Claims. (Cl. 251—145)



4. In a valve of the class described, a valve housing, a pilot member having a through passage and extending longitudinally through said housing and closing the ends of the latter except for the passage through said pilot member, said pilot member being formed with a flow opening and air inlet openings communicating with said passage, a slide slidably mounted on said pilot member and threadedly connected to said housing for axial movement relative to said pilot member upon rotation of said housing relative to said pilot member, a valve member slidably mounted on said pilot member and coacting with the latter and said housing to define suction and atmospheric chambers within said housing communicating with said flow opening and said air inlet openings respectively, a spring interposed between said valve member and said slide for urging said valve member into closed relation with said air inlet openings to preclude communication between said flow opening and said atmospheric chamber, the tension of said spring being adjustable by movement of said slide to permit operation of said valve member only in response to a predetermined pressure differential between said chambers, and means effective for maintaining said slide in an adjusted position.

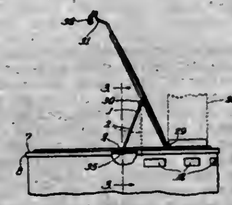
2,473,621
ROUNDING MACHINE
Laurence E. Topham, Wenham, and Edwin W. Smith, Beverly, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application September 2, 1947, Serial No. 771,596
15 Claims. (Cl. 12—18)



4. In a rounding machine having a reciprocatory knife, an anvil against which said knife cuts along a line in the cutting plane of said knife, means for moving said knife and anvil together with a feeding stroke to impart a feed movement to a work piece disposed therebetween and then with a return stroke in the reverse direction, said knife and anvil also being mounted to move in response to an angular change in the position of a work piece penetrated by said knife, means for equalizing the last-mentioned movements of said knife and anvil, a fork associated with said knife and having converging walls, and an abutment adapted to be engaged by said walls at the end of each return stroke whereby said knife and anvil are then returned to their original positions.

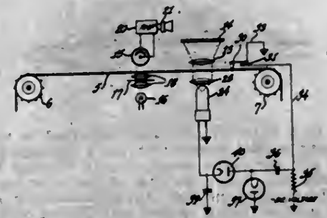
2,473,622
TYING DEVICE
Harry Truswell, St. John, New Brunswick, Canada
Application May 19, 1948, Serial No. 27,901
3 Claims. (Cl. 70—15)

1. A fettering device comprising a cable, a hook secured to one end of the cable and arranged to receive a portion of the cable intermediate its ends, said hook comprising a one-piece spring steel member of U-shaped form, one end portion of said member extending between the legs of the U-shaped form and being inclined towards one of the legs to provide a space therebetween less than the diameter of the cable, and a button on the cable for engagement with the hook, said button comprising a housing and cable-gripping means wholly concealed within the housing, said cable-gripping means when in cable-gripping position permitting movement of cable through the housing in one direction only.



2,473,623
APPARATUS FOR MANUFACTURING SLIDE FASTENERS
Maurice Volty, New York, N. Y., assignor to Serval Slide Fasteners, Inc., a corporation of New York
Original application March 26, 1942, Serial No. 436,279. Divided and this application March 18, 1946, Serial No. 655,165
2 Claims. (Cl. 153—1)

1. An apparatus for assembling on a tape, slide fastener elements obtained from a continu-

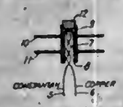


ous strip having integral embryonic slide fastener elements uniformly formed and positioned thereon with their jaws facing toward an end of the strip, said apparatus comprising a source of strip supply, a source of tape supply, means to guide the strip toward the tape, means to intermittently feed the strip, means to successively sever the foremost element from said strip, means to successively attach the severed element to the tape, means including a tape drum to intermittently advance the tape, and means to maintain the tape under tension adjacent said attaching means, said drum being so arranged as to guide the tape along a fixed undeviating path between said attaching means and said drum with the web of the tape substantially parallel to the direction of feed of said strip and sloping away from the attaching means.

2,473,624
INCINERATOR
Henry Weyenberg and Wayne E. Tice, Holland, Mich., assignors to Holland Furnace Company, Holland, Mich., a corporation of Delaware
Original application May 4, 1944, Serial No. 534,029. Divided and this application July 30, 1945, Serial No. 607,876
2 Claims. (Cl. 217—60)

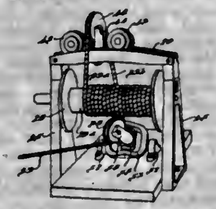
1. In an incinerator having side walls forming a combustion chamber and a top frame therefor, a cover for said chamber hinged to said top frame and opening upwardly and having a gravity operated latch device to hold the cover in open position, said latch device comprising a rod pivotally hung from the under side of said cover and a lug fixed to said top frame and extending inwardly beyond said side walls and into the top portion of the combustion chamber space, said lug being positioned between the cover hinge and the pivot of the rod when the cover is in closed position and being nearer the pivot of the rod than that of the hinge, said lug having an upwardly opening groove in its top face, said rod having two parallel offset arms connected together at their adjacent ends by a cross member so that the upper one of said arms is positioned inwardly of the inner end of said lug and the lower arm is positioned outwardly of the inner end of said lug, said cross member being intermediate of the length of said rod to swing freely under said lug when the cover is partially closed and to be a distance above the lug equal to the length of the lower arm when the cover is latched open, whereby when opening the cover the lower arm will ride over the front edge of said lug and have its free end fall into said groove to hold the cover open, and when the cover is further raised and then lowered the rod will swing freely rearwardly of the lug and as the cover is further lowered said lower arm will ride over the rear edge of the lug and when the cross member passes beyond the lug it will freely swing forwardly below the lug.

2,473,625
MOTION-PICTURE CONTINUOUS FILM EDITING SYSTEM
Benjamin F. Wheeler, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 30, 1946, Serial No. 713,247
5 Claims. (Cl. 88—16.8)



1. A film editing system comprising a film having picture frames thereon, means for advancing said film at a substantially uniform speed, an observation medium on one side of said film, a lamp on the other side of said film, and means controlled by said moving film for energizing said lamp only at the instances said picture frames are positioned between said lamp and observation medium, said last mentioned means including a switch operated by the sprocket holes in said film and a counting circuit for controlling the energization of said lamp after the passage of a predetermined number of sprocket holes through said switch, said circuit including a pair of condensers, one condenser being discharged by each closure of said switch.

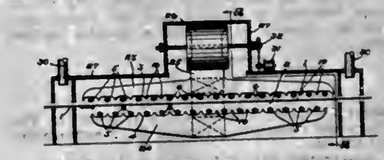
2,473,626
MAGNET FOR ELECTRIC BULBS
Harvey L. White, Springfield, Ohio
Application April 3, 1946, Serial No. 659,211
5 Claims. (Cl. 176—16)



1. A magnet means for use with an incandescent electric lamp having a pear-shaped globe comprising a square shaped magnet having an upper concave surface which is adapted to conform to the shape of and receive the globe, a spring arm having a threaded apertured collar on one end thereof adapted to receive a screw therein, a spring clasp on the other end of said spring arm adapted to encircle the globe so that when the magnet is in place and the screw is tightened to retain the magnet in close contact with the globe the magnet will collect loose filament particles within the globe to prevent discoloration of the globe.

2,473,627
THERMOCOUPLE WITH RADIATING FINS
Gilbert S. Wiekizer and Ernest N. Brown, Riverhead, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application September 21, 1944, Serial No. 555,092
3 Claims. (Cl. 136—4)

3. A thermocouple device comprising a temperature responsive electric element composed of two wires of dissimilar metal twisted together, an insulating tubular member surrounding the twisted portion of said wires, said insulating tubular member being closed at one end, the other end being provided with metallic leads for connecting the twisted portion of said wires, a metallic member surrounding said insulating tubular member, and a plurality of spaced radiating fins secured in thermal contact with said metallic member to provide greater thermal conductivity therewith.

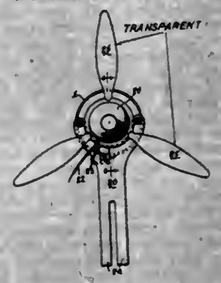


2,473,628
WINDING DEVICE OR WINCH
William D. Allison, Detroit, Mich., assignor, by direct and mesne assignments, to Motor Research Corporation, Detroit, Mich., a corporation of Michigan
Application August 19, 1944, Serial No. 550,153
10 Claims. (Cl. 254—190)

1. In a cable control device for a winding drum or the like, track means comprising a pair of spaced curved parallel rails supported at one side of the drum, a carriage adapted to travel along said rails and including two pairs of rollers, each pair having rolling engagement with a rail, a pulley support mounted on the carriage between the pairs of rollers and pivotally mounted on the carriage to turn about an axis fixed with relation to the carriage and extending between the rails transversely thereof, a guide pulley rotatably mounted on said support and adapted to swing laterally with said support about said axis during travel of the carriage along the rails, and a cable guide mounted at one side of the drum for guiding the cable to the guide pulley and thence to the drum.

2,473,629
DRYING APPARATUS
Bernard R. Andrews, Braintree, Mass.
Application November 16, 1944, Serial No. 563,636
3 Claims. (Cl. 263—3)

3. A drying apparatus comprising a drying chamber through which a web of material to be dried is fed, a plurality of radiant heat-generating units spaced from each other longitudinally of the chamber, each unit comprising a plurality of cylindrical bodies of refractory material arranged closely adjacent each other and with their axes at right angles to the web, the face of each cylindrical body that is directed toward the web having an annular depression presenting concave walls, each body having an axial opening, a tubular member in the opening of each body having an enlarged end at said face of the body and also having a bridge piece, a cap member secured to said bridge piece and provided with a peripheral



annular skirt which is directed away from the web and which forms with the periphery of the enlarged portion of the tubular member an annular burner opening directed toward the annular depression in the body and away from the web, said tubular member constituting a fuel-supply duct, means to supply gaseous fuel to said duct, a nozzle element between each two adjacent radiant heat-generating units, and means to deliver air under pressure through each nozzle element.

2,473,630
POLYCHLOROPHENOLS IN FERMENTATION OF CARBOHYDRATES
Antonio Barreto, Rio de Janeiro, Brazil, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application June 2, 1944, Serial No. 538,544
5 Claims. (Cl. 195—123)

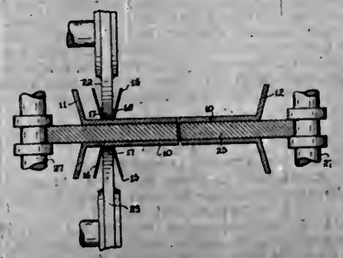
1. The improvement in the fermentation of bacteria-containing grain mashes in the presence of a yeast which comprises sterilizing the mash with small amounts of a pentachlorophenol, said pentachlorophenol being present in an amount varying between 0.025 and 0.1 gram per liter of the mash.

2,473,631
SIGNALING DEVICE FOR VEHICLES
Henry J. Beemer, Sidney, Ohio
Application November 13, 1945, Serial No. 628,274
7 Claims. (Cl. 177—329)

1. A stop signal for a vehicle comprising a rotary power element adapted to be energized by a source of electromotive force, a shaft driven by said element, arms extending radially from said shaft, said arms being transparent and hol-

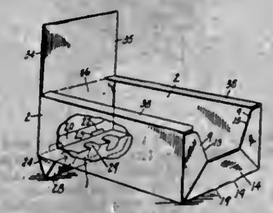
low with the openings at the end of the arms presented to said shaft, a lamp for emanating light from a position where the arms converge, the light extending through the interior of the arms outwardly to be propagated to the exterior of the arms, electrical connections to said lamp and rotary power element from the source of electromotive force in the vehicle, said connections including a switch adapted for being actuated to complete said circuit by the braking mechanism of the vehicle, whereby the rotary power element is rotated and the illuminated arms are caused to describe a circular lighted area.

2,473,632
EXTENSIBLE STRUT
Robert G. Bode, Chicago, Ill., assignor to The Norwood Company, Chicago, Ill., a corporation of Illinois
Application May 5, 1945, Serial No. 592,207
1 Claim. (Cl. 248—161)



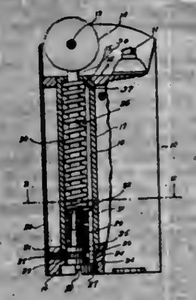
As a new article of manufacture, an extensible strut comprising a cylindrical vertically extending tubular lower member with a cutout in its upper end, a substantially cylindrical vertically extending upper member slidably mounted within the lower member and provided with a longitudinal groove in alignment with the cutout, a bracket connected to the upper end of the lower member and embodying a housing part shaped to form a compartment with the inner portion thereof open and in communication with said cutout, consisting of top, outer, side and bottom walls, and having an opening in the inner portion of its bottom wall, an upstanding lever type detent of U-shaped cross section having the upper end thereof extending into the compartment via said opening and provided with a ratchet type tooth extending into the groove in the upper member and coacting therewith to hold the two members against relative rotation, said detent having the central portions of its sides notched and in such interfitting relation with the bottom wall of the bracket housing part as to form a pivotal connection whereby the detent may be rocked into and out of an operative position wherein said tooth engages the groove defining portion of the upper member and serves to hold said upper member against downward sliding movement with respect to the lower member, and a V-shaped wire spring disposed wholly within the housing part of the bracket, having one leg thereof fitting against the outer wall of said housing part and its other leg disposed within and abutting against the upper end of the detent, and serving to urge the detent into its said operative position.

2,473,633
METHOD OF WELDING FINS TO TUBULAR MEMBERS BY ELECTRIC RESISTANCE WELDING
John W. Brown, Jr., Lakewood, Ohio, assignor to Brown Fintube Company, Elyria, Ohio, a corporation of Ohio
Application March 20, 1946, Serial No. 655,643
3 Claims. (Cl. 219—10)



1. The method of welding fins with a current conducting base portion to the inner surface of a current conducting tubular member which includes the steps of positioning within said tubular member an assembly comprising at least one fin with its base adjacent said inner surface and a conductor member adapted to extend across the interior opening in said tubular member to conduct a welding current from one region on the inner surface to another, said conductor member being formed of such material and so proportioned that it offers substantially less resistance to passage of current from one of said regions to the other than does said tube wall, positioning an external roller welding electrode over each of said regions at each end of said conductor member, forcing said tube wall inwardly and causing a welding current to flow from one electrode through one of said regions, the base of said fin, said conducting bar and said other region to the other electrode while said electrodes and said tubular member are moving relative to each other.

2,473,634
ELECTRIC RESISTANCE WELDING METHOD
John W. Brown, Jr., Lakewood, Ohio, assignor to Brown Fintube Company, Elyria, Ohio, a corporation of Ohio
Application July 15, 1947, Serial No. 761,115
2 Claims. (Cl. 219—10)

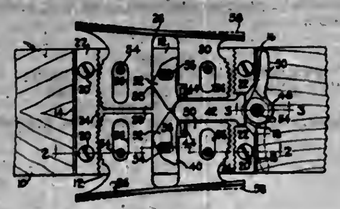


1. The method of simultaneously forming a weld between two members of one pair of metal members and another weld between two members of another pair of metal members with a single pair of roller welding electrodes to provide a series of individual spot welds including the steps of forming an assembly comprising the two pairs of members to be welded with one pair separated from the other by a highly current conductive metal plate having a substantial area of contact with each adjacent member and so positioned that the regions to be welded in each pair and the plate are in transverse alignment, positioning a roller welding electrode on each side of said assembly so each electrode makes rolling contact with one outer member of a pair at the region of the respective welds, engaging the edges of said plate with a plurality of guide rollers to guide the plate parallel to the plane of the electrode rollers; moving said rollers and said assembly relative to each other to cause the electrode rollers to traverse the regions to be welded and intermittently passing a welding current from one electrode roller to the other through said assembly to form a line of spot welds in the welded regions.

2,473,635
DISPLAY CARTON WITH SUPPORT
Kenneth T. Buttery, Kalamazoo, Mich., assignor to Sutherland Paper Company, Kalamazoo, Mich., a corporation of Michigan
Application October 8, 1945, Serial No. 621,002
7 Claims. (Cl. 206—45.26)

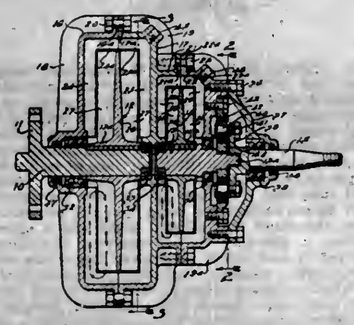
1. A display carton formed of an integral blank and comprising a bottom, side walls hingedly joined to the side edges of the bottom and provided with inturned cover supporting flaps at their upper edges, outer rear wall members on the rear ends of said side walls having overlapping interlocking engagement, an inner rear wall hingedly connected to the rear end of the bottom and disposed on the inner side of the outer rear wall members and supported thereby and having laterally spaced inverted U-shaped slits and a transverse score line joining the slits at the lower ends thereof providing a rear easel member with tongues at the upper edge thereof, the bottom having slits extending forwardly from adjacent the rear corners thereof and having a plurality of laterally spaced forwardly facing U-shaped slits adjacent its rear end and a transverse score joining all the slits at the forward ends thereof providing a front easel member hingedly joined to the rear easel member, the erection of the easel resulting in an open space across the plane of the bottom, said forwardly facing U-shaped slits providing supporting tongues disposed in the plane of the bottom and extending rearwardly over the open space resulting from the erection of the easel, the said tongues on the rear easel member being engaged with the bottom edges of the outer rear wall members when the easel is erected, and a cover hingedly joined to the upper edge of said inner rear wall member, said cover closure flap being disposed in forward parallel relation to said outer rear wall members when said cover is in said upright position and said easel is in erected position.

2,473,636
PYROPHORIC ELEMENT FEEDING MECHANISM FOR LIGHTERS
Adolph Campos, Newark, N. J.
Application June 21, 1946, Serial No. 678,289
1 Claim. (Cl. 67—7.1)



In a lighter including a fuel-containing receptacle, the combination with a rotatable abradant surfaced wheel and a pyrophoric element, of a mechanism for feeding said element relative to said wheel, said mechanism including a hollow, cylindrical tube, there being a longitudinally-extending groove along the inner face of said tube, a pyrophoric feeding means arranged within said tube and mounted for rotative movement, said means including a head, a shank projecting from the inner face of said head, and a spring having a plurality of convolutions thereabout carried by said shank, a follower supporting said pyrophoric element arranged concentrically within the convolutions of said spring and resting upon said shank, said follower having a transversely-projecting means embodying a pin in co-acting engagement with the space intermediate a pair of said convolutions and having an end thereof extending into said groove, means on said head for applying rotative movement thereto to thereby impart rotative movement to the spring and travel of the follower along a longitudinal, linear path through said tube, means embodying a shoulder on said groove, coacting with said transversely-projecting pin for limiting the travel of said follower, and means embodying a bolt carried by said receptacle and inter-engaging said tube and said head for holding the tube and pyrophoric feeding means in assembled relation within said receptacle.

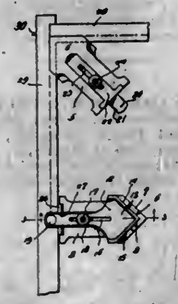
2,473,637
TOE PLATE FOR SKI BINDINGS
Elbert H. Carroll, West Boylston, Mass.; Howard W. Cowee and Elizabeth C. Carroll, executors of said Elbert H. Carroll, deceased, assignors to Carroll Pressed Metal Company, Worcester, Mass., a corporation of Massachusetts
Application March 10, 1945, Serial No. 581,977
7 Claims. (Cl. 280—11.35)



1. Adjustable toe irons for skis comprising a pair of abutments for securement to a ski in spaced relation thereon, a pair of upstanding

side plates, a pair of spaced tangs on each side plate and means to move the tangs into engage-

ment with the abutments against resistance imparted by the side plates.

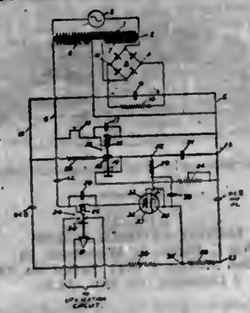


2,473,638
HYDRAULIC TRANSMISSION AND CLUTCH
Reginald I. Cumming, Ypsilanti, Mich., assignor of twenty-five per cent to Edwin G. Streicher, twenty-five per cent to Edward M. Streicher, and twenty-five per cent to George A. Weins, all of Ypsilanti, Mich.
Application September 14, 1944, Serial No. 554,008
6 Claims. (Cl. 74—688)

1. In a hydraulic transmission, a rotatable housing unit comprising two adjacent annular chambers adapted to contain a hydraulic medium and each provided with a series of diverging radially extending fins, each fin comprising portions within the chamber extending inwardly in the same plane from the side and end walls of the chamber, a pair of impellers coaxial with the housing unit and disposed within said chambers, each impeller having a series of diverging radially extending fins movable within the annular space formed between the inner edges of the fins of the associated chamber, means for supporting said impellers for rotation one independently of the other, a driving element connected to one impeller, a driven element, and gearing connecting the driven element, housing unit and second impeller.

2,473,639
DOOR CASING GAUGE
John W. Erickson, Seattle, Wash.
Application April 24, 1944, Serial No. 532,501
1 Claim. (Cl. 33—42)

A gauge for positioning lines parallel to and equidistant from the inner edges of a rectangular frame comprising an elongated gauge body having one end substantially perpendicular to the longitudinal center line of such body and at its opposite end two mutually perpendicular edges symmetrically disposed relative to said center line so that said edges intersect along a line of jointure perpendicularly intersecting said longitudinal center line and diverge from said line of jointure at substantially equal angles to said center line, said body having in each face thereof a respective undercut groove extending along said center line from said one end of said body to locations adjacent said opposite end of the latter, an elongated gauge plate overlying one side of said body and having a longitudinally extending rib thereon slidably received in the corresponding groove of said body, said gauge plate including a narrow portion extending beyond said one end of said body and a marginally flanged wide



portion having mutually perpendicular end edges respectively parallel to the mutually perpendicular end edges of said body, a slide slidably engaged in the groove in the other side of said body and having at one end an elongated, perpendicularly disposed flange parallel to said one end of said body and provided in its edge with a notch slidably receiving the narrow portion of said gauge plate, a scribe point carried by said gauge plate outwardly of said flange and positioned at a predetermined distance from said flange, regardless of the longitudinal position of said guide plate relative to said body, by sliding said slide relative to said body, said gauge plate and said slide having respective longitudinally extending slots therein, and respective clamp screws extending from said body through said gauge plate and slide slots to releasably clamp said gauge plate and said slide in adjusted position longitudinally of said body.

2,473,640
ELECTRICAL CIRCUITS
Donald P. Faulk, Waltham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application November 5, 1947, Serial No. 784,121
13 Claims. (Cl. 315—355)

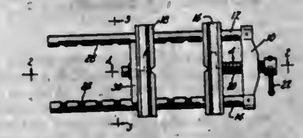
1. A timing circuit including, in combination, a timing condenser, a circuit connecting said condenser across a source of electrical energy for charging the same therefrom, a voltage divider connected across said source, said condenser being connected to said voltage divider with the voltage across said condenser being in series opposition with the voltage drop across a portion of

said divider, and a circuit energized by a predetermined small difference between said condenser

voltage and said voltage drop for producing a signal.

2,473,641
EVAPORATOR
Henry H. Feldstein, Cleveland, Ohio
Application March 26, 1945, Serial No. 584,941
16 Claims. (Cl. 257—197)

1. A heating or evaporator element for the purpose specified comprising an annular outer wall and an annular wall within and spaced from the outer wall, the tops and bottoms of the said walls being united, the said element being provided with an inlet connection for supplying a condensable heating fluid to the space between the said walls, the said element being provided with an outlet at the top for incondensable gases and an outlet at the bottom for condensate, the said outlets being angularly spaced from the inlet and the distance between the inner and outer walls diminishing substantially progressively from the inlet toward the outlets.



2,473,642
LOW-PRESSURE ELECTRIC DISCHARGE DEVICE
Clifton G. Found and Wilford J. Winninghoff, Cleveland Heights, Ohio, assignors to General Electric Company, a corporation of New York
Application January 9, 1948, Serial No. 1,454
8 Claims. (Cl. 176—122)

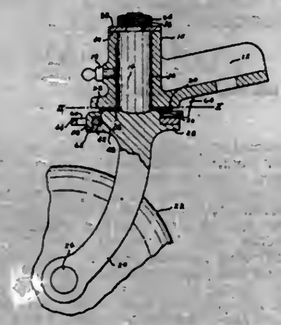
1. In an electric discharge device the combination comprising an envelope, electrode means within said envelope and an ionizable medium therein consisting of mercury and an inert gas of the group consisting of krypton and xenon, or mixtures thereof, said inert gas pressure not

exceeding 12 millimeters of mercury, and the wall loading of the envelope surface lying within the range from 7 to 21 milliwatts per square centimeter, inclusive.

2,473,643
TOOLMAKER'S VISE OR CLAMP
John M. Frobiom, Holland, Mich.
Application January 12, 1945, Serial No. 572,518
1 Claim. (Cl. 144—303)

In a toolmaker's vise of the class described adapted for holding work pieces, a pair of work holding jaws, a pair of spaced side rail members for supporting said work holding jaws for longitudinal movement therealong, a cross head connecting one end of said side rail members and having a screw rotatable therein connected with one of said work holding jaws for moving said work holding jaw upon rotation of said screw, a plurality of spaced slots on the proximate faces of said side rail members, said slots having parallel proximate faces inclined at an angle to a plane containing said side rail members, a single parallelogram shaped swivelable plate member mounted on the other of said work holding jaws and having planar parallel surfaces on the extremities thereof inclined to the major axis of said single parallelogram shaped swivelable member for locking in said slots, the inclined faces of said spaced parallel slots of said side rail members and said planar parallel surfaces on the extremities of said parallelogram shaped swivelable plate member being adapted for contact upon rotation of said parallelogram shaped swivelable plate member to form a stop against further unintended rotative movement of said parallelogram shaped swivelable plate member and whereby said other work holding jaw may be rapidly adjusted in position on said side rail members and locked in position by said single parallelogram shaped swivelable plate member.

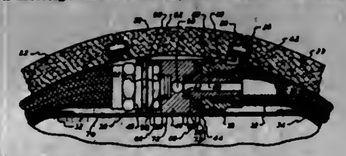
2,473,644
SINKER
John Groza, Detroit, Mich.
Application November 18, 1946, Serial No. 710,682
2 Claims. (Cl. 43—27)



1. A device for use on fish lines to prevent snagging comprising a pair of plate elements each bent to form angularly disposed wings thereon, tabs formed on each of said elements at the ends of their apex portions with each tab having an aperture formed therein, said elements being positioned with their apices in back to back abut-

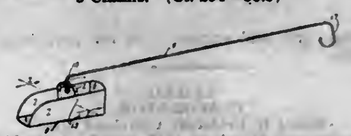
ting relation, the upper edges of the elements being tapered in converging relation towards said

line of abutment, and means securing said elements in said position.



2,473,645
STEERABLE TAIL WHEEL
Charles Hollerith, Jackson, Mich., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio, a corporation of New York
Application April 22, 1946, Serial No. 663,991
6 Claims. (Cl. 244—50)

1. A full swivel steerable tail wheel assembly, comprising a wheel bracket including a vertical post, a fixed body in which said post is supported for full swivel movement, a pair of superimposed apertured relatively flat plates concentrically arranged and supported upon said bracket and post, one of said plates having steering connections to oscillate the same in a substantial arc, means providing a drive between said plates, a drive connection between the other of said plates and said bracket for oscillating said bracket through said arc, fixed abutment means engaging with said other plate upon oscillation within the limits of said arc, said other plate being bodily shiftable by said first plate following engagement with said abutment means to break said drive connection with said bracket, to permit said bracket to full swivel, and continuously acting spring means for re-establishing said drive connection with the driven part of said bracket located in said arc.



2,473,646
EXPANDER TUBE FOR BRAKES
Charles Hollerith, Jackson, Mich., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio, a corporation of New York
Application November 27, 1944, Serial No. 565,338
4 Claims. (Cl. 137—156)

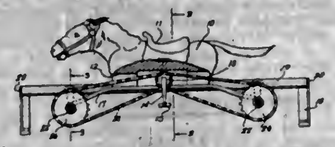
1. In a fluid brake having a brake element displaced by fluid pressure confined within an actuating means, actuating means comprising a pair of double ended expander tubes, end fittings for said tubes, a fluid manifold in which said fittings are received, and means for detach-

ably connecting said end fittings to said manifold.

2,473,647
HANDY STOKER SCOOP
Otis L. Hulstedt, Woodhull, Ill.
Application March 7, 1947, Serial No. 733,143
3 Claims. (Cl. 294—53.5)

1. In a device of the character described, the combination of an open end scoop having a laterally curved bottom, upwardly extending sides and an outwardly curved closed end connecting said sides, a brace member formed as an inverted U secured on said sides intermediate the ends and extending upwardly of said sides, the portion of said brace member intermediate said sides being tilted slightly relative to the bottom of said scoop and having a central opening therein, a longitudinal handle bent at an angle near one end thereof to form an extending portion terminating in a hand grip and a relatively short dependent portion adapted to engage in said central opening rotatably mounting said scoop thereon, a flanged collar secured on said dependent member, the flange thereof being arranged to bear on the sides of said brace member removed from said scoop, a second flanged collar slidably carried on said dependent member, the flange thereof bearing against the side of said brace member adjacent said scoop, the said flanges cooperating to engage the said brace member therebetween, a third flanged collar secured on said dependent member closely adjacent the end thereof, and a helical compression spring surrounding said dependent member and mounted under compression between the flanges of said second and third collars to press said second collar and flange against said brace member whereby said brace member is releasably secured between said first and second flanges to maintain said scoop in a predetermined position relative to said handle.

2,473,648
CONTROL KNOB OF THERMOPLASTIC MATERIAL
Gerald V. Jakeway, Grand Rapids, Mich., assignor to Keeler Brass Company, Grand Rapids, Mich., a corporation of Michigan
Application November 29, 1945, Serial No. 631,614
7 Claims. (Cl. 74—553)

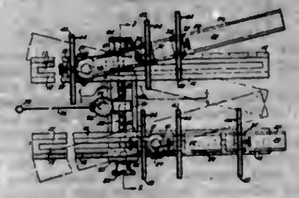


1. A knob comprising a thermoplastic body member of premolded thermoplastic material provided with a spindle socket and an external peripheral flange at its outer end, the outer side of the flange being flush with the end of the body

member, the flange having an annular rearwardly facing groove of substantial width and depth in its inner side, a cap of premolded thermoplastic material having an external peripheral flange at its inner end arranged on said body member in abutting relation thereto and with its flange overlapping and abutting the flange of said body member but being of less radial diameter than the radial diameter of the flange on the body member, and an annular coupling and grip member of thermoplastic material closely em-

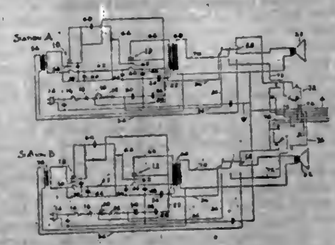
bracing the flange on said body member and having a flange at its inner end in interlocking engagement with the rearwardly facing groove on the flange of the body member and closely embracing the side of the body member constituting the inner wall of the groove, the outer end of the coupling member being in upset engagement with the top and periphery of the cap member flange and the outer side of the body member flange which projects beyond the flange of the cap member and in closely embracing relation to the side of the cap member.

2,473,649
HOBBYHORSE
John Jensen, Chatsworth, Ill.
Application April 29, 1947, Serial No. 744,721
4 Claims. (Cl. 272—73)



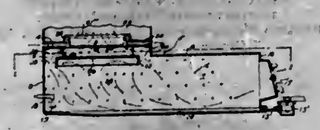
1. In a hobby horse, a supporting frame, crank shafts transversely journaled in said frame adjacent the opposite ends thereof, resilient connecting and supporting members extending between the crank pins of said shafts, said shafts being rotatable within journals carried by the ends of said members, a body carried by said supporting members, and means for rotating said crank shafts simultaneously to impart movement to said body.

2,473,650
PHONOGRAPH PICKUP WITH MECHANICAL FILTER
Henry P. Kalmus, Chicago, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application June 10, 1943, Serial No. 490,296
2 Claims. (Cl. 179—100.4)



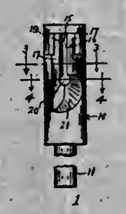
1. In a phonograph pickup, a supporting arm, a pickup head, a mechanical filter element connected between said arm and head, a vibratile member supported in said head, and electrical circuit connections including said filter element electrically connected with said vibratile member.

2,473,651
ADJUSTABLE TARGET STAGE
Herman Katz, Oakland, Calif.
Application November 23, 1945, Serial No. 630,375
7 Claims. (Cl. 128—76.5)



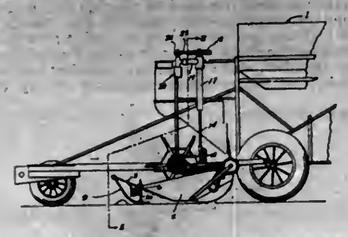
1. In eye exercising apparatus including means to divide a patient's vision into two separate fields and to limit monocular vision to a single field, primary guide means in the respective fields and extending generally parallel to the patient's lines of vision in said fields, secondary guide means carried by and movable longitudinally of said primary guide means, means to position said secondary guide means at various positions of angularity with respect to the primary guide means, and targets carried respectively by the primary and secondary guide means and adjustably positionable therealong.

2,473,652
THERMIONIC VACUUM TUBE CIRCUIT FOR INTERCOMMUNICATION SYSTEMS
Sol J. Klapman, Chicago, Ill.
Application January 11, 1947, Serial No. 721,589
17 Claims. (Cl. 179—37)



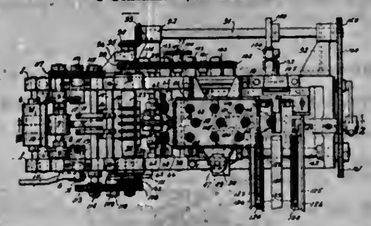
1. An amplifier for an intercommunication system comprising a plurality of thermionic tubes; anode, cathode, and grid electrodes for each of said thermionic tubes; a power source; means connected to said power source for supplying voltage at said anode and grid electrodes; a filter system in circuit with said cathode electrodes; a capacitor charged at the anode supply voltage when said tubes are in a non-emitting condition; and switch means for connecting said capacitor in circuit with said cathode electrodes for rapidly heating said cathode electrodes upon the discharge of said capacitor.

2,473,653
OIL BURNER HAVING AIR ADMISSION AND FUEL VAPORIZATION MEANS
Harry C. Little, San Rafael, Calif.
Application November 20, 1944, Serial No. 564,290
5 Claims. (Cl. 158—91)



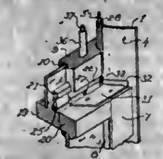
1. In a liquid fuel burner, means forming a horizontally-elongated fuel vaporizing and air admixing chamber provided with a plurality of air inlets in its side walls, means for delivering a regulated amount of liquid fuel to the lower part of said chamber, a heat conducting plate mounted adjacent the top of said chamber and provided with a downwardly directed flange around its periphery, means adjacent the top of said chamber providing a burner throat of smaller circumference than and located proximately above said plate, the flange of said plate being spaced from said chamber side walls so as to allow passage of fuel vapor from said chamber into said burner throat, a combustion chamber above said burner throat, means to supply air to the space between the throat and the plate, means for supplying air to the vaporizing chamber directly from the exterior thereof and toward said flange, and means for supplying secondary air to the throat above said space.

2,473,654
ROTARY CLEANING TOOL
George H. Loeser, Malden, and Charles C. Gangle, Woburn, Mass., assignors to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application November 23, 1944, Serial No. 564,887
3 Claims. (Cl. 15—104.04)



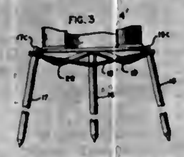
1. A rotary cleaning tool comprising a steel body provided with an axial work-receiving bore and an annular series of circumferentially spaced segments around the bore, cutters on the leading inner edges of said segments, a clean-out opening at the inner end of and at an angle to the bore, the sides of said segments sloping from the periphery of the body to the bore and wall of said clean-out opening to discharge shavings removed by said cutters and one of said sides having a curved surface adjacent the inner end of said bore.

2,473,655
COMBINE PLATFORM CONTROL
Leif K. Lohn, Norwich, N. Dak.
Application January 2, 1948, Serial No. 12
2 Claims. (Cl. 56—214)



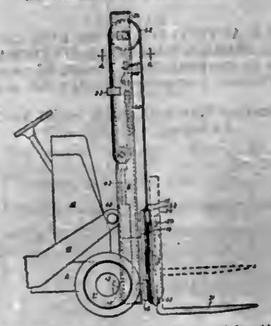
1. In a combine having a vertically-adjustable platform, the combination with a reversible electric motor operatively connected to said platform for raising and lowering the same, of a bar fixed to said platform and extending forwardly thereof in vertically-spaced relation to the ground, a shoe hinged to said bar and extending downwardly and rearwardly into engagement with the ground, said bar being formed with a substantially-vertically-disposed guide in overlying relation to said shoe, a rod pivoted to said shoe and vertically slidable in said guide, vertically-spaced fixed upper and lower contacts depending from said bar in proximity to said rod, a movable contact carried by said rod between said fixed contacts, said movable contact engaging said upper fixed contact upon upward movement of said shoe and rod relative to said bar, said fixed contact engaging the lower fixed contact upon downward movement of said shoe and rod relative to said bar, and circuit means operatively connecting all of said contacts to said motor whereby to drive said motor in opposite directions upon engagement of said movable contact with said upper and lower fixed contacts so as to raise and lower said platform automatically in conformance with vertical movement of said shoe.

2,473,656
MACHINE FOR FORMING ARTICLE SUPPORTING PALLETS FOR WRAPPING MACHINES
Norman W. Lyon and Roland E. Brown, Springfield, Mass., assignors to Package Machinery Company, East Longmeadow, Mass., a corporation of Massachusetts
Application December 12, 1947, Serial No. 791,268
6 Claims. (Cl. 154—30)



4. A machine for making article supporting pallets for wrapping machines which comprises means for advancing a web of thin cardboard, oppositely paired shaping rolls to which the web is fed by said advancing means, a cutter positioned between the advancing means and the shaping rolls to sever pallets of predetermined length from the web, the shaping rolls making driving engagement with the longitudinal central portion only of the web and severed pallets, the outer end portions of the shaping rolls being contoured to freely bend the edge portions of the pallets into parallel corrugations one at each side of the engaged central portion, a pair of opposed contoured forming rolls making a driving engagement over the entire width of the pallets to permanently set the corrugations in the pallets and stationary side guides engaging the edge portions of the pallets between the shaping and forming rolls to maintain the shape of the corrugations during the passage of the pallets from the shaping rolls to the forming rolls.

2,473,657
WINDOW FRAME AND SASH
Edward H. McClintock, West Springfield, Mass.
Application March 9, 1945, Serial No. 581,763
3 Claims. (Cl. 189—72)

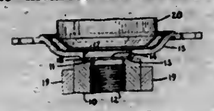


1. In combination, a window frame having stool and head and stiles, the inner and confronting faces of the stiles being substantially in the form of opposed and vertically-disposed wedges with the points of the wedges disposed in the median vertical plane of the frame, upper and lower sash slidably mounted one on the confronting wedge faces on one side of said plane and the other on the confronting wedge faces on the other side of said plane, and means for limiting the movement of the sash away from said plane, said means including two members secured one to each end of a horizontal rail of one of said sash and extending across said plane and in outwardly diverging relation to slidably engage one with each of the confronting wedge faces on which the other sash is slidably mounted.

2,473,658
BROILER
Lawrence D. Milligan, Lake Forest, Ill.
Application April 19, 1947, Serial No. 742,685
8 Claims. (Cl. 248—151)

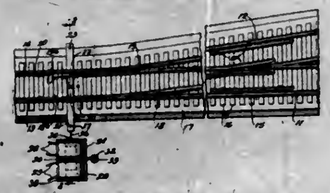
1. A supporting stand for a cooking utensil or the like comprising at least three separate unconnected elongate legs arranged symmetrically about a vertical axis and spaced radially from said axis at both their top and bottom ends, said legs each being inclined upwardly toward said axis, said legs being interconnected near their upper ends only through the medium of one or more tie members, the upper end portions of said legs each extending through said tie member or members and forming fingers which are operative conjointly to grip the base of the cooking utensil, said tie member or members being sufficiently flexible in the horizontal plane to enable said fingers to be spread apart to receive the base of the cooking utensil by moving the lower ends of said legs laterally toward the vertical axis of the stand, said tie member or members being operative to spring-press said fingers radially against the base of the cooking utensil.

2,473,659
INDUSTRIAL TRUCK
Herman C. Musgrave, East Cleveland, Ohio, assignor to Towmotor Corporation, Cleveland, Ohio, a corporation of Ohio
Application June 10, 1946, Serial No. 675,745
10 Claims. (Cl. 214—113)



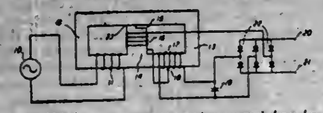
1. In an industrial truck, in combination with the front portion of the frame thereof and a substantially vertical mast supported thereby, a carriage assembly comprising a supporting member slidably mounted upon the mast and a rotatable member mounted for rotary movement upon and with respect to the said supporting member, a sheave secured to the said rotatable member with its axis of rotation coincidental with the axis of rotation of said rotatable member, and means for imparting rotary movement to the said rotatable member, the said means comprising a pair of cylinder and piston rod elements, one of the elements of each pair being movable with respect to the other element of each pair, a guide carried by each of the movable elements of each pair of elements, pulley means supported on said carriage assembly and disposed above said guides and sheave and a flexible operating member having its ends secured to a non-reciprocable portion of the truck above said guides and below said pulley means and extending thence about the respective guides and about the respective pulley means with the bight of the said flexible member extending around and having a driving connection with a portion of the aforesaid sheave.

2,473,660
WELDED STRUCTURE AND METHOD OF ASSEMBLING SAME
Edwin A. Parmann, Batavia, Ill., assignor to Furnas Electric Company, Batavia, Ill., a corporation of Illinois
Application February 12, 1947, Serial No. 728,024
5 Claims. (Cl. 285—25)



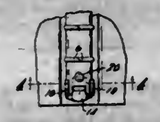
1. An article of manufacture comprising, a member having a bore, a plate-like member of

lesser width than that of said first-mentioned member but wider than said bore, said plate member being disposed near an end of said first member and having an aperture of lesser diameter than said bore to form a constricted passage, and a flange-like member surrounding said plate



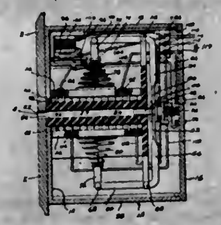
member and being integrally united by welding to said first member, said flange member having a portion thereof extending inwardly over the outer edge of said plate member to securely unite said plate member to said first member and provide an integral structure.

2,473,661
DOUBLE-ACTING SOLENOID FOR CONTROL OF MODEL RAILROAD SWITCHES
Howard B. Peabody, Lake Forest, Ill., assignor to The Pioneer Company, Chicago, Ill., a partnership
Application March 23, 1948, Serial No. 16,562
4 Claims. (Cl. 175—337)



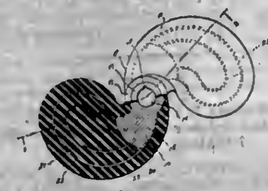
2. A mechanism for actuating a railroad switch comprising a sleeve having an aperture extending partially about its periphery, a solenoid surrounding said sleeve, a magnetic core of smooth surface configuration in said sleeve and axially shiftable in response to energization of said solenoid, a U-shaped braking member extending through said aperture into engagement with said core, and means operable to pinch together the free ends of said braking member.

2,473,662
RECTIFYING ARRANGEMENT
George H. Pohm, Lorain, Ohio, assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio, a corporation of Ohio
Application August 2, 1944, Serial No. 547,775
14 Claims. (Cl. 175—363)



1. A rectifying arrangement comprising in combination a polyphase rectifier, a transformer having a main flux path with a saturable portion and a leakage flux path magnetically in parallel with the saturable portion, said leakage flux path having a plurality of portions having differing magnetization characteristics, at least one of said portions having a non-linear magnetization characteristic, said transformer having a plurality of windings, one of which is adapted to be connected to a source of single-phase alternating current, a capacitor connected to another of said windings and adapted to provide magnetizing current for said saturable portion of the main flux path, and circuit connecting means for energizing the polyphase rectifier from said plurality of windings.

2,473,663
RING BINDER CONSTRUCTION
John Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts
Application October 4, 1945, Serial No. 620,314
1 Claim. (Cl. 129—24)



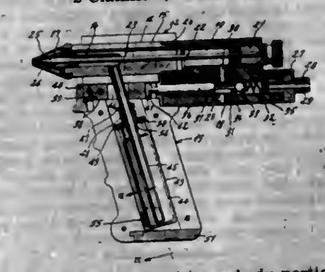
In a ring binder mechanism having toggle plates in hinged relation at their inner edges and by which plates the rings are carried and a spring plate including top and side portions providing yielding seats for the outer edges of the toggle plates, the spring plate having rivet openings near its ends for securing the mechanism to the back panel of a binder cover; a sheet metal stamping shaped as a frame having a base portion extending beneath the spring plate near one end thereof and having side portions embracing the sides of the spring plate in a rigid load bearing grip, said frame also having a cylinder form of spacer portion at its inner end in alignment with the adjacent rivet opening, and a booster lever having an opening through which the spacer portion passes, said lever having a fulcrum engagement on the base portion of the frame, the inner end of the lever engaging the underside of the toggle plates at their hinged portions for toggle operation by said lever, all constructed and arranged for such structure by reason of said sheet metal frame construction in the combination stated to be operable for effective test before it is riveted to a binder back panel for its normal use.

2,473,664
ELECTRIC LOCKING DEVICE
Joseph E. Taylor, Philadelphia, Pa.
Application May 10, 1946, Serial No. 668,898
8 Claims. (Cl. 175—320)

1. A key operated electric switch for connecting the opposite sides of a power source to the opposite sides of a load circuit comprising a plurality of spaced apart contacts positioned for simultaneous engagement by a key and electrically insulated from each other, a switch circuit for connecting the opposite sides of the power source to the opposite sides of the load circuit and including a gap between two selected contacts, said contacts being electrically connectable by a properly coded key inserted into said key operated switch, normally closed electro-magnetic switch means interposed in said switch circuit in series with said gap and operated to open said switch circuit when energized, and an energizing circuit for said electro-magnetic switch means extending between the opposite sides of said power source and including in series said electro-magnetic switch means and a gap between two separate groups of non-selected contacts, whereby said electro-magnetic switch means will be energized to interrupt said switch circuit if any contact of one group is electrically interconnected with any contact of the other group of non-selected contacts.

2,473,665
PROPELLER
William W. K. Van Nort, Cabin John, Md.
Application September 20, 1946, Serial No. 698,121
1 Claim. (Cl. 170—159)

In a flexible propeller comprising a pair of flexible propeller blades, a rigid core member within the propeller having a hub portion and integral arm portions extending limited distances into the propeller blades, the features which include having the propeller as a whole provided with an S-shaped profile with the blades widening gradually from the inner to the outer ends thereof and the outer ends being rounded, having the arm portions extending part way into the main body portions of the blades and widening gradually from the hub portion to the outer ends thereof, a pair of independent flexible wire members extending fixedly at both ends of both members into the outer end of each arm portion within the propeller blade respectively associated therewith, and extending from the arm portions in the form of a pair of rounded loops disposed in each blade independently in substantial parallel relation, with one spaced uniformly within the other and both generally conforming to the curved contour of the outer curved edge of said propeller blade.

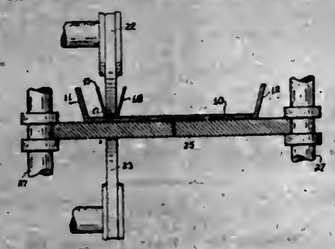


2,473,666
SASH BALANCE
August Viehweger, Comstock Park, Mich., assignor to Grand Rapids Hardware Company, Grand Rapids, Mich., a corporation of Michigan
Application January 23, 1946, Serial No. 642,845
8 Claims. (Cl. 16—197)

7. A tubular element for sash balances formed of a strip of metal of substantial width spirally wound upon itself with the convolutions thereof overlapping substantially one-half the width of the strip, the overlying portion of the strip having an outwardly projecting rib of inwardly facing curved channel section on its edge, the underlying

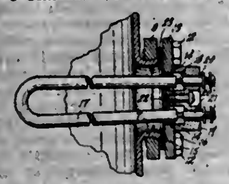
portion of the strip being inwardly folded and offset substantially the thickness of the strip.

2,473,667
SPRAY GUN
Michael M. Warner, Chicago, Ill.
Application June 14, 1945, Serial No. 599,434
2 Claims. (Cl. 299—88)



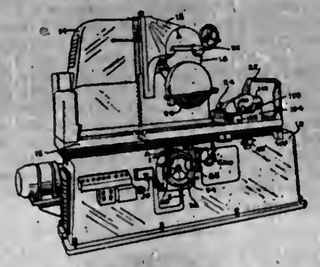
1. A spray gun comprising a body portion and a grip portion, said body portion including an air passageway and a paint passageway disposed longitudinally therein, a conical nozzle connected to said passageways with the paint passageway centrally disposed and the air passageway forming an annular discharge orifice about said paint passageway, a spring-pressed valve controlling flow of air into said air passageway, a sliding rod mounted in the body for transmitting the movement of the operator's finger directly by a sliding movement to said valve for unseating the same to permit flow of air into said air passageway, said grip member abutting said body portion and having a chamber therein and a paint container disposed in said chamber in communication with the paint passageway of said body portion.

2,473,668
ELECTRIC RESISTANCE WELDING METHOD
Oral Welsh, Elyria, Ohio, assignor to Brown Fintube Company, Elyria, Ohio, a corporation of Ohio
Application July 15, 1947, Serial No. 761,098
1 Claim. (Cl. 219—10)



The method of resistance welding a relatively light gauge, elongate, channel section, steel finned member to a relatively stiff heavy gauge steel

plate member in a seam welder having a pair of substantially identical electrode rolls disposed in substantially the same plane by a series of resistance welds, which includes the steps of positioning a relatively soft and highly current conductive metal plate against one face of said steel plate member to provide a substantial area of contact between the adjacent surfaces of each and positioning said elongate member against the opposite face of said plate member, positioning one electrode roll of said welder against said elongate member and the other electrode roll of said welder against said current conductive metal plate in position to make rolling contact with the outer face of said elongate member and said cur-



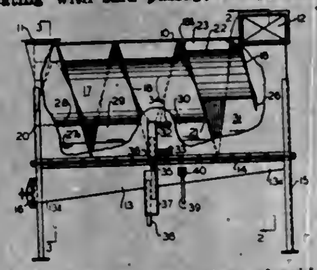
rent conductive metal plate, respectively, urging said electrodes toward each other with pressure sufficient to deform said current conductive metal plate to cause it to conform to said steel plate member and to provide substantial areas of electrical contact between said current conductive plate and said steel plate member and the adjacent electrode roll, respectively, moving said electrode rolls and the assembly made up of said finned member and said plate member relative to each other to cause the electrode rolls to traverse the region to be welded and passing a welding current from one electrode roll to the other through said assembly to form a line of resistance welds between the finned member and plate member without substantially damaging said plate member opposite the welds.

2,473,669
TANK PORT AND COUPLING
Gerald E. White, Middleville, Mich., assignor to White Products Corporation, Middleville, Mich.
Application November 16, 1946, Serial No. 710,581
6 Claims. (Cl. 219—38)

1. A port and coupling for a tank having a sheet metal wall comprising a drawneck extruded outwardly from the wall of said tank, and a coupling ring defining a beveled aperture pressed around said drawneck and spaced from the wall of said tank with the beveled portion thereof facing outwardly, the outer end of said drawneck being spun outwardly to lap against said beveled portion, the end surface of said drawneck being machined flat in a plane parallel to said coupling ring and spaced therefrom, said ring defining a series of tapped apertures thereabout.

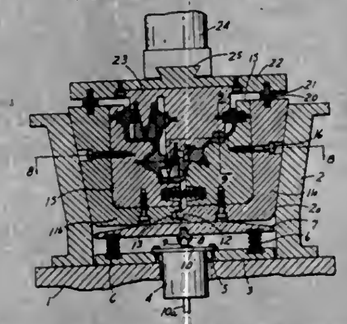
2,473,670
GRINDING MACHINE
John C. Wilson, Springfield, Ohio, assignor to The Thompson Grinder Company, Springfield, Ohio, a corporation of Ohio
Application June 7, 1945, Serial No. 596,031
20 Claims. (Cl. 125—11)

1. In a method of shaping a grinding wheel by a crushing roll; pressing the said wheel and said roll together; driving the said wheel and said roll at the same peripheral speed; and incrementally feeding the said wheel and roll towards each other during continued rotation of said wheel and roll for a complete dressing cycle.



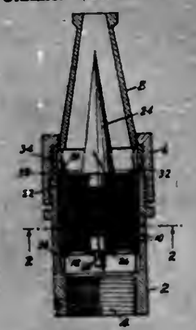
2,473,671
CRUTCH
William J. Yackley, Peoria, Ill.
Application October 9, 1945, Serial No. 621,199
7 Claims. (Cl. 135—49)

1. In combination, a pair of crutches, each of said crutches having an arm-pit support, a hand grasp on each of said crutches, a spacer element extending between said crutches, a plate carried by each end of said spacer element, a plate provided with a notch on each of said arm-pit supports, the plates of said spacer element being pivotally secured to the plates respectively of said arm-pit supports, a pivoted latch on each of said crutches and adapted to engage with the notch of the plate of said arm-pit support complemental thereto, means on said hand grasps for operating said latches, and means for holding said latches in engagement until released by the means on said hand grasps.



2,473,672
DUST COLLECTOR
Giovanni C. Zilliotto, Lake Orion, Mich.
Application November 13, 1946, Serial No. 628,280
6 Claims. (Cl. 261—119)

1. An air cleaner comprising a main outer casing member, an inner casing member disposed within said outer member and spaced therefrom, the lower portion of each casing member being formed by downwardly converging side walls, a helical blade interposed between said members and forming a helical passage between said members, said blade having the opposite edge portions thereof conforming to the shape of the opposed surfaces of said casing members, a tank communicating with said passage at opposite sides

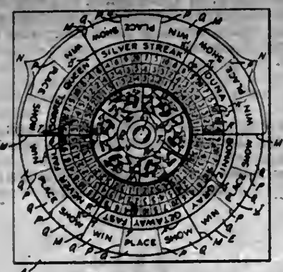


of the lower portion or portions of said blade, means for maintaining a body of liquid within the tank and within the lower portion of the outer casing member at a level or levels to cause the lower portion or portions of said blade to be constantly submerged in the liquid and to form restricted spaces between the surface of said liquid and the bottom of the inner casing member whereby air flowing through said passage will impinge against said surface.

2,473,673
MACHINE FOR STRAIGHTENING AND SIZING CASTINGS, FORGINGS, STAMPINGS, OR THE LIKE
Clarence W. Bell, Lakewood, Ohio
Application December 4, 1945, Serial No. 632,676
7 Claims. (Cl. 153—33)

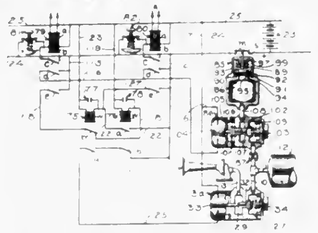
3. In a straightening and sizing machine, a holder comprising an outer hollow body having downwardly and inwardly inclined camming walls, die shoes having outer cam surfaces coacting with said walls and mounted in the holder, a yieldable support in the holder on which the shoes are rockably carried, a base member on which the holder is mounted, the die shoes being interlocked at their lower portions for rocking spreading movement at their upper portions, lower die members on the die shoes, spring means between adjacent portions of the shoes to separate them when they are elevated, a support above the holder, and movable downward toward the holder, and upper die members on the support to enter between the lower die members on downward movement of the support to effect rocking pressure movement of the lower die shoes and die members thereof toward each other and toward the upper die members.

2,473,674
NOZZLE
Frederick Boehm, Philadelphia, Pa., assignor to Schutte and Koerting Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 25, 1944, Serial No. 565,078
4 Claims. (Cl. 299—117)



1. A nozzle comprising a body having a pair of relatively angularly displaceable members and having a passage for fluid therethrough, means defining helical portions of said passage comprising a series of thin elements having outwardly extending arms, the arms of the elements being progressively angularly displaceable to provide helical bounding walls for said portions of the passage, means interconnecting said members and said thin elements and adapted to assume helical shapes of pitches dependent upon the relative angular displacements of said members, thereby to control the pitch of said helical portions of said passages, said interconnecting means comprising flexible members passing through openings in the peripheral portions of said thin elements, and means to secure said elements between said body members.

2,473,675
ROTATING DISK RACING GAME
Clarence F. Boreszewski, Camden, N. J.
Application May 20, 1945, Serial No. 596,731
3 Claims. (Cl. 273—141)



1. A racing game comprising a base having a plurality of concentric areas, said areas being divided into a plurality of radially aligned sectors, each sector of one of said concentric areas designating a different participant in any one race, each sector of another of said concentric areas being subdivided circumferentially into a number of subdivisions each of which designates a selection to be made by a player of the anticipated position of a particular participant in the race relative to the other participants therein at the conclusion of play representing said race, and each sector of a third of said concentric areas being subdivided into a like number of radially-adjacent, circumferentially extending rows within the sector, said rows being further subdivided into a plurality of radial columns of blocks extending through said number of rows, at least

certain of said blocks bearing indications designating odds payable to a player in accordance

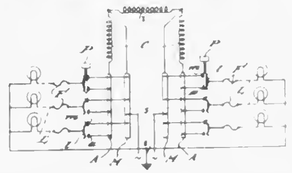
member and adapted to impose on the system the same mechanical load as the member and to produce a potential varying in magnitude and polarity to represent the motion of the driven member under the control of the signal, a potentiometer calibrated in terms of the displacement of the member by the signal connected to the potential producing means to form a bridge circuit and a contact on the potentiometer for balancing the bridge circuit.

2,473,683
RELAY CONTROL SYSTEM
Claude M. Hines, Verona, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Original application April 30, 1942, Serial No. 441,197. Divided and this application June 23, 1945, Serial No. 601,104
7 Claims. (Cl. 175—373)



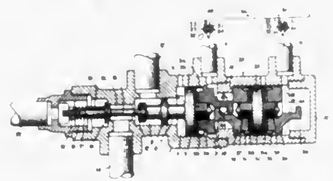
1. In a control system, the combination of two relays each of which has a winding effective upon energization to cause pick-up of the relay, means associated with each of said relays for imparting a slow drop-out characteristic to said relay, means for causing energization of the winding of one of said relays, means effective in response to pick-up of said one relay for causing energization of the winding of the other of said relays, means effective in response to pick-up of said other relay for effecting deenergization of the winding of said one relay, and means controlled jointly by said two relays for effecting periodic control impulses.

2,473,684
FUMIGATING SYSTEM
Arthur G. Howard, Flint, Mich.
Application June 3, 1946, Serial No. 673,999
9 Claims. (Cl. 21—108)

4. In combination with a building structure having a plurality of floor levels and equipment to be fumigated on each level, a generator for an insecticidal gas located on a lower floor level of such structure, a standpipe extending from said apparatus, distribution lines communicating with said standpipe one at each floor level, and a plurality of conduits connecting each distribution line with equipment located on said level.

2,473,685
CURRENT DISTRIBUTION PANEL
Ernest G. Johansson, Belmont, Mass., assignor to Anchor Manufacturing Company, Boston, Mass., a corporation of Massachusetts
Application August 26, 1944, Serial No. 551,372
2 Claims. (Cl. 175—183)

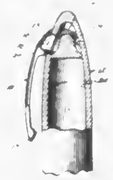
1. A distribution meter panel for normally feeding a plurality of load circuits directly from a supply circuit and for selectively diverting without interruption any one of the load circuits through the meter of the panel, said panel comprising a series of switches each switch having a main supply contact, an auxiliary supply contact, and a load contact; a main bus having a supply terminal for connection to one side of said supply circuit the other side of which is connected to said load circuits, means for connecting it to one terminal of a coil of said meter, and connections to said main supply contacts; an auxiliary bus having means for connecting it to the other terminal of said coil, and connections to said auxiliary contacts; a plurality of terminal means for connection to said load circuits, each terminal means being connected to a respective one of said load contacts; and switch actuating means for connecting the load contact of a selected switch to either its main or auxiliary supply contact or to both main and auxiliary contacts, said actuating means being movable from a position in which only load and main supply contacts are connected, through an intermediate position in which all three contacts are connected to a position in which only load and auxiliary supply contacts are connected whereby, by moving said actuating means, said coil may be included in and removed from any one of said load circuits without interrupting the connection between load and supply circuits.



2,473,686
COMPOSITE BILLET AND MANUFACTURE THEREOF
Walter L. Keene, Dormont, Pa., assignor to Superior Steel Corporation, Carnegie, Pa., a corporation of Virginia
Application February 12, 1946, Serial No. 647,015
6 Claims. (Cl. 29—196.1)

1. A method of making a composite billet comprising assembling billet components of stainless steel and cuprous metal with a sheet of ordinary steel therebetween which is bondable to both the stainless steel and the cuprous metal, sealing the edges of the sheet of ordinary steel to the billet component of stainless steel to protect the

stainless steel against oxidation and fastening together the assembled billet components.

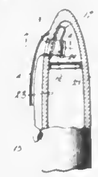


2,473,687
FLUID PRESSURE RELAY VALVE MECHANISM
Norman G. Kershaw, London, England, assignor, by mesne assignments, to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application June 25, 1946, Serial No. 679,097
In Great Britain October 9, 1945
2 Claims. (Cl. 121—38)

1. A control mechanism comprising a casing, first and second movable abutments disposed in said casing in coaxial relation to each other, adjacent faces of said abutments cooperating with said casing to form a first pressure chamber, the opposite face of said second abutment cooperating with said casing to form a second pressure chamber, means for conveying fluid under pressure to and from said chambers individually, said first abutment having a normal position and adapted to be moved out of said normal position to a second position by fluid under pressure in said one chamber, an element associated with said first movable abutment having an interlock finger disposed in said one chamber, another element associated with said second movable abutment having an interlock finger disposed in said one chamber in the path of movement of the first mentioned interlock finger and adapted to engage said first mentioned interlock finger upon movement of said second abutment by fluid under pressure in said first chamber to hold said first abutment against movement, said second abutment being movable upon supply of fluid under pressure to said second chamber to move the respective interlock finger out of contact with the other finger to render said first movable abutment movable by fluid under pressure in said first chamber.

2,473,688
CLIP FOR WRITING INSTRUMENTS
Lynn P. Martin, Fort Madison, Iowa, assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a corporation of Delaware
Application December 14, 1944, Serial No. 568,111
6 Claims. (Cl. 24—11)

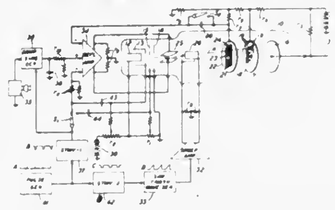
1. The combination with a slotted cap of a writing instrument, of clip means comprising an arm disposed exteriorly of a wall of the cap, rigid means on said arm guided by and extending movably through said slot, and an S-shaped spring having a portion thereof disposed interiorly of the wall of said cap one end of said spring



being fixed with respect to said interior wall and the other end being fixed to said arm for yieldably maintaining said arm in an operative position with respect to said outer cap wall.

2,473,689
CLIP FOR WRITING INSTRUMENTS
Charles N. Colstad, Cranston, R. I., assignor, by mesne assignments, to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a corporation of Delaware
Application January 24, 1945, Serial No. 574,355
6 Claims. (Cl. 24—11)

1. The combination with a slotted cap of a writing instrument or the like, of clip means comprising an arm disposed exteriorly of a wall of the cap, a rigid projection on said arm extending through said slot, said rigid projection having an angularly extending portion spaced from the inside wall of said cap and resilient means engaged between said angularly extending portion and said cap wall for yieldably urging said arm against said exterior wall.

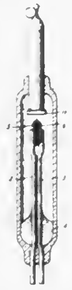


2,473,690
CLIP FOR WRITING INSTRUMENTS
Wilbur K. Olson and Lynn P. Martin, Fort Madison, Iowa, assignors to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a corporation of Delaware
Application January 31, 1945, Serial No. 575,407
5 Claims. (Cl. 24—11)

1. The combination with a slotted cap of a writing instrument or the like, of clip means comprising an arm disposed exteriorly of a wall of the cap, a rigid projection on said arm extending through said slot, and resilient means

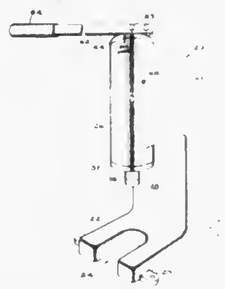
comprising a substantially U-shaped spring having one end engaging the interior wall of said cap and the other end engaging said rigid projection for yieldably maintaining said arm in an operative position with respect to said outer cap wall.

2,473,691
STABILIZATION OF CATHODE BEAM TUBES
Larned A. Meacham, New Providence, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 5, 1947, Serial No. 766,211
13 Claims. (Cl. 315—21)



1. Signal translating apparatus which comprises an electron discharge device having means for projecting a focussed beam of electrons, a target member for said beam having a plurality of different discrete target areas, means controlled by a signal to be translated for deflecting said beam to selectively strike one of said areas, and means for preventing wander of said beam from an area first struck, said wander-preventing means comprising an auxiliary electrode in the path of said beam comprising a plurality of elements aligned with the divisions between the separate areas of said target member, each pair of adjacent elements defining a beam path from said beam-projecting means to one of said areas, means for feeding back to said deflecting means a current flowing by way of said beam from said beam projecting means to any of said elements, said feedback current having a beam-confining component which varies cyclically with the location of said beam with respect to said elements and having an average value, means for interrupting the beam-confining component of said feedback current, and means for applying to said beam-deflecting means a current which is equal to said average valve independently of said interruptions.

2,473,692
UNDERGARMENT FOR MEN
Daniel W. Murphy, West Islip, N. Y.
Application May 10, 1946, Serial No. 668,729
2 Claims. (Cl. 2—234)



1. An undergarment comprising a waistband, leg and crotch portions, a fly opening extending upwardly on a curve away from the center line of the garment from a point above the crotch portion and to one side of the center line through the waistband and fastening means in the waistband only for securing the garment on a wearer and closing the fly opening.

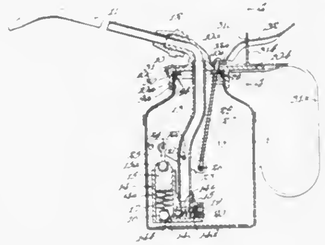
2,473,693
MERCURY CONTACT DEVICE
Charles E. Pollard, Jr., Hohokus, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 19, 1947, Serial No. 775,081
6 Claims. (Cl. 200—112)

1. In a circuit maker and breaker, a sealed envelope having a pool of mercury therein, a mercury wick sealed in said envelope and extending from said pool of mercury, a pair of parallel plates terminating the upper end of said wick and spaced sufficiently near each other to maintain mercury therebetween, a magnetically movable armature in the form of a thin plate of magnetic material conforming in shape but of slightly larger area than said plates suspended between said plates and supported by the force of the surface tension of said mercury and an electrode in cooperative relationship with said armature normally out of contact with said armature but within the plane of the surface of said armature.

2,473,694
MANUALLY OPERATED HYDRAULIC PRESS
Wendell E. Renick, Grove City, Ohio, assignor to The Denison Engineering Company, Columbus, Ohio, a corporation of Ohio
Application May 25, 1945, Serial No. 595,751
4 Claims. (Cl. 60—52)

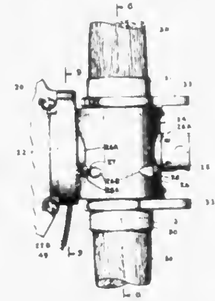
2. A manually operated hydraulic press comprising a body having a piston chamber, a bore

in axial alignment with said chamber, an annular reservoir concentric with said bore, and passages connecting the ends of said chamber and said reservoir with circumferentially spaced points in said bore; a piston slidably received by said piston chamber; a plug disposed for oscillatory movement in said bore, said plug having a piston chamber and valve-containing inlet and outlet ports; a second piston disposed for reciprocatory movement in the chamber in said plug; and a hand lever pivoted for swinging movement on said plug to impart reciprocatory movement to said second piston, said lever and plug being movable about the axis of the latter to alternately connect the inlet and outlet ports with the passages leading to the opposite ends of the first-mentioned piston chamber, the passage leading from said reservoir being in constant communication with said inlet port.



2,473,695
MULTIVALVE CONTROL STATION FOR SERVOMOTORS
Roy R. Stevens, Forest Hills, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application January 21, 1947, Serial No. 723,327
14 Claims. (Cl. 121—38)

1. In combination, two operator's control means each comprising a lever having a zone of movement, self-lapping controlling structure operative by movement of said lever in said zone, and repeater means controlled by said structure in the other control means for automatically positioning the respective lever in accordance with the position of the other lever, and other means for selectively rendering the structure of either control means effective to control the repeater means in the other control means and for at the same time rendering the other structure ineffective.

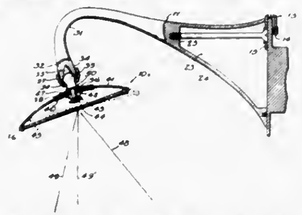


2,473,696
HAND OILER
Axel G. Anderson, Minneapolis, Minn.
Application October 24, 1945, Serial No. 624,228
2 Claims. (Cl. 222—385)

1. A hand oiler comprising a container, a cap therefor, a pump conduit assembly including a conduit attached to said cap running through the same and extending downwardly into the container and a pump located within the container and carried by said conduit, said pump including a reciprocating piston adapted to force oil through said conduit on a down stroke of the piston, a lever located within said container and intermediately pivotally mounted on said pump conduit assembly, a pitman pivotally connected to one end of said lever and having a ball and socket connection with said piston, a rod pivotally connected to the other end of said lever and projecting upwardly through said cap, a spring urging upwardly the end of the lever to which said pitman is connected, an operating finger

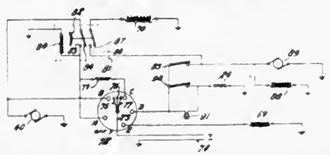
lever fulcrumed on said cap and connected to the upper end of said rod and a spout connected to the upper end of said conduit.

2,473,697
PROPELLER
Griffith Annesley, New York, N. Y.
Application May 26, 1944, Serial No. 537,386
6 Claims. (Cl. 170—160.47)



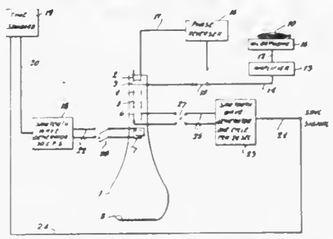
1. A ferrule having an open outer end adapted to receive the end of a propeller blade, combined with a hub having a bore adapted to fit a motor shaft and a bearing for rotatively supporting said ferrule on an axis normal to the axis of the bore, a longitudinally movable rod wholly within and parallel to the bore in the hub connected to the ferrule at a point spaced from its axis of rotation, means comprising a stop on the end of the rod engageable with said hub for limiting the movement of the rod in one direction, a counterweight affixed eccentrically to the ferrule arranged to move the rod longitudinally in said one direction, a disk freely rotatable on the motor shaft beyond the end of the rod and normally disengaged therefrom, and means for moving the disk into engagement with the rod to impart longitudinal movement to the rod in the opposite direction.

2,473,698
REARVIEW MIRROR ADJUSTABLE BY ROTATION ABOUT A MEDIAN AXIS
Fred J. Aves, Beverly Hills, Calif.
Application September 22, 1947, Serial No. 775,462
3 Claims. (Cl. 88—93)



1. In a rear view mirror device, a casing carrying a mirror in its front and having a semispher-

ical rear wall of large radius relative to its area presenting an axial opening, a pair of relatively small, semispherical discs disposed, respectively, against and conforming to the inner and outer surfaces of said rear wall in covering relationship to said opening, said discs having coaxial openings smaller than the opening in said rear wall, a mounting post of round cross section having a diameter substantially equal the diameter of the opening in each of the respective discs,

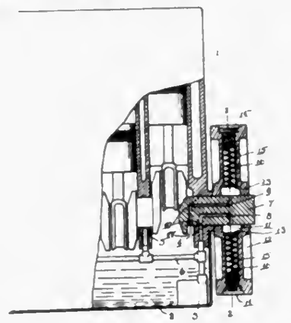


said post extending through said openings in said discs and said rear wall, means providing an annular abutment, of smaller diameter than the outer disc, around the post and in position to be frictionally engaged by the outer disc, spring means in the casing around the inner end of the post and bearing rearwardly against the inner disc whereby to resiliently urge the discs and casing towards said abutment, and bracket means supporting the post; said casing being laterally slidable relative to the discs and post.

2,473,699
AIRPLANE HEATER HAVING TWO-SPEED CONTROL
Clarence H. Bennett, Philadelphia, Pa., assignor to Selas Corporation of America, Philadelphia, Pa., a corporation of Pennsylvania
Application June 20, 1944, Serial No. 541,187
2 Claims. (Cl. 126—110)

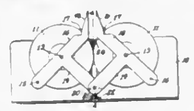
1. In a heating system including a heater, means to supply a combustible mixture of air and fuel to the heater including a blower and a fuel supply line, means including a fan for circulating air to be heated past the heater, two pressure regulator devices connected in the fuel supply line to deliver fuel only at two fixed pressures to the heater, electrically operated valve means connected in the fuel line to permit fuel to be supplied to the heater at one or the other higher fixed delivery pressure, an ignitor for igniting the combustible mixture supplied to the heater, an electric motor for driving the blower and fan, two circuits for the motor to operate the latter only at two speeds or speed ranges, a time delay relay having an element movable from a first position to a second position after an interval of time following initial energization, switch means movable between an off position and two heat operating positions, means including the switch means in each of its heat operating positions to energize the ignitor and the time delay relay, means including the switch means in one heat operating position and the time delay relay when the element has moved to its second position to energize the motor through one of the circuits associated therewith and the electrically operated valve means so that fuel will be supplied to the heater at one fixed delivery pressure and the motor will operate at one speed or speed range, and means including the switch means in the other heat operating position and the time delay relay when the element has moved to its second position to energize the motor through another of the circuits associated therewith and the electrically operated valve means so that fuel will be supplied to the heater at the other higher fixed delivery pressure and the motor will operate at the other higher speed or speed range.

2,473,700
APPARATUS FOR TESTING THE ACCURACY OF MOVEMENTS
Carl Berkley, New York, N. Y., assignor to Allen B. DuMont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application October 6, 1944, Serial No. 557,526
2 Claims. (Cl. 73—6)



1. Apparatus for testing the accuracy of operation of a device said apparatus comprising a cathode-ray tube having an electron gun producing an electron beam, deflecting plates for scanning said beam and a long persistent fluorescent screen energized by said beam, a plurality of sawtooth wave generators connected to said deflecting plates, means for producing electrical signal test pulses from said device, means to apply said signal to said electron gun of said tube to modulate the beam thereof, a time standard pulse generator connected to said sawtooth wave generators to control said sawtooth wave generators and cause said beam of said tube to scan a rectangular pattern, said test pulses applied to said electron gun causing said beam to trace a row of dots on said screen, the angle of said row of dots being a function of the rate of said device, and the alignment of said row being a function of the regularity of said device.

2,473,701
LUBRICANT FILTERING SYSTEM
Giles E. Bullock, Rochester, N. Y.
Application December 15, 1944, Serial No. 568,332
2 Claims. (Cl. 184—6)

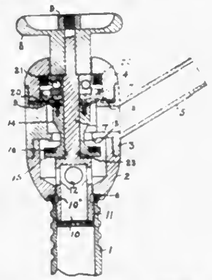


1. An oil filter for a crank shaft having a pair of substantially parallel ducts with a radially extending inlet leading into one of said ducts and a radially extending outlet leading from the other of said ducts circumferentially spaced therefrom, a combined fly wheel and filter having a hollow hub forming a manifold chamber

mounted on said crank shaft so as to have said manifold chamber connect the inlet and the outlet of said ducts, radially disposed collecting ducts

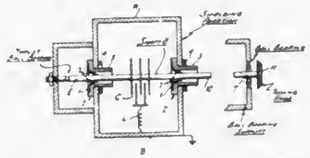
extending from said manifold chamber thru said fly wheel and a removable closure member for closing each of said collecting ducts.

2,473,702
SHARPENING DEVICE
Arvid F. Carlin, Mamaroneck, N. Y.
Application February 27, 1948, Serial No. 11,610
6 Claims. (Cl. 51—214)



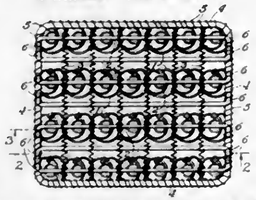
1. A sharpening device of the class described, comprising a housing, open at both ends, said housing being formed with a centrally located recess upon each side thereof, guiding members pivotally disposed in the housing, rollers turnably arranged in the guiding members, the latter being formed with slanting top portions, whereby to accommodate the article to be sharpened.

2,473,703
PROCESS FOR PRODUCING POTASSIUM TUNGSTATE
Henry Seymour Colton, Shaker Heights, and Robert W. Frischmuth, University Heights, Ohio, and Raymond L. Knowles, Bronxville, N. Y.
No Drawing. Original application May 5, 1941, Serial No. 391,978. Divided and this application November 17, 1947, Serial No. 786,542
1 Claim. (Cl. 23—51)



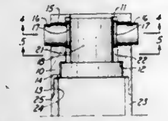
The process of obtaining potassium tungstate as a water soluble metathetical compound of the tungsten component of scheelite, and the potassium component of feldspar, which comprises: intimately mixing the said materials, in finely divided form, with water, and causing the mixture to react through the sole agency of elevated temperature and pressure, by subjecting it to a temperature of approximately 600° F. and a pressure of approximately 1000 lbs. per square inch, and removing the said water-soluble compound from the reacted product by water solution.

2,473,704
HOSE CONNECTOR AND VALVE
Owen L. Garretson, Roswell, N. Mex., assignor to Phillips Petroleum Company, a corporation of Delaware
Application October 1, 1947, Serial No. 777,249
9 Claims. (Cl. 284—17)



1. A combined connector and valve comprising a housing having an apertured inner wall dividing the housing into two compartments, said aperture being defined by a valve seat, a pressure fluid connection to said housing on one side of said wall, a manually operable shaft extending through said housing and having a threaded end extending exteriorly of said housing, a valve disc slidably mounted on said shaft, and a diaphragm sealed in said housing and connected to said valve disc, said diaphragm being exposed to pressure fluid.

2,473,705
ELECTRICAL CONTACTOR FOR MOVABLE SHAFTS
Ralph W. George, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application April 24, 1945, Serial No. 590,011
5 Claims. (Cl. 173—324)

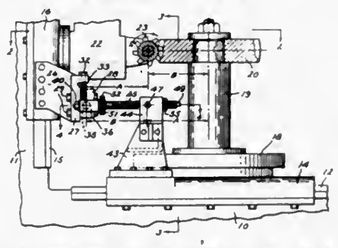


1. An electrical contactor for a movable metallic shaft, comprising a metallic bushing having a central aperture larger than the diameter of the shaft to be accommodated thereby, said bushing having a recess at one end thereof bounded by a circular wall of larger internal diameter than the diameter of said aperture, a disc-like metallic washer securely fastened at its periphery to said circular wall of said bushing and having a plurality of uniformly spaced contact fingers forming an aperture which is smaller than but registers with the aperture of said bushing, said contact fingers forming tapered segments which are joined together at their wide bases, said contact fingers being bent to provide a substantially cylindrical surface slotted at the edges of said segments and which cylindrical surface is adapted to make positive mechanical and electrical contact on its interior with the shaft which it surrounds.

2,473,706
SPRING ASSEMBLY FOR UPHOLSTERY
William Walter Gleason, Chicago, Ill., assignor to Nachman Corporation, Chicago, Ill., a corporation of Illinois
Application August 30, 1946, Serial No. 693,831
2 Claims. (Cl. 5—269)

1. A spring assembly comprising a series of parallel spaced apart rows of upholstery springs, helical tie-wires extending transversely of said rows and joining all springs of all of said rows, resilient border frames disposed marginally of all marginal springs of the several rows of the latter, resilient flat wires bridging all springs of each row axially of the same and equipped with terminal flanges overlapping and disposed in surface contact with the border frame, the width of said flat wires being no greater than the length of coils of said tie-wires and being secured by the latter to overlapped terminal end-coil portions of the springs, encircling and joining the springs of the several rows of the latter, the end-coils of the springs of each row and end-coil portions of the springs of the outermost rows thereof being disposed in overlapping relation to the border frames, and helical tie-wires encircling said border frames, the flanges of said bridging wires and the portions of the springs overlapping said border frames.

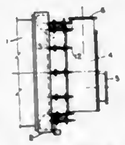
2,473,707
DISPENSER WITH SLITTED RESILIENT DIAPHRAGM
Arthur Hammerstein, Palatine, Ill.
Application September 14, 1945, Serial No. 616,316
1 Claim. (Cl. 222—490)



A dispensing device adapted for communicating connection with a container including an enclosing member having an open end and a diametrically apertured side wall, an inwardly directed annular flange at the said open end, an outwardly directed interior shoulder on said member in axially spaced relation to said flange, a relatively stiff hollow resilient member positioned within the enclosing member in side wall spaced relation therewith, an enlarged external base on said member fitted beneath said shoulder and snugly engaging the enclosing member to hold the resilient member therein, an outer end wall of the resilient member having a normally closed slit in register with the open end of the enclosing member, separate opposed plungers slidably mounted through the apertures in the side wall of the enclosing member for deforming the resilient member to open the slit, and collars on the inner ends of said plungers positioned between the spaced side walls of said members.

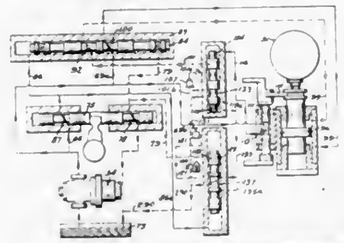
2,473,708
POLYMERIZED VINYL AROMATIC MATERIALS
Ralph F. Hayes, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application June 30, 1943, Serial No. 492,892
2 Claims. (Cl. 260—30.8)

1. In a process for polymerizing styrene to a polymerization product free from crazing on long standing, the steps which compromise incorporating in styrene 0.01–5% based on the amount of styrene, of the sodium salt of dioctyl sulfosuccinate and heating the resulting mixture for a sufficient length of time to reduce the methanol-soluble content of the resulting polymeric product to below 3%.



2,473,709
MACHINE FOR MANUFACTURING SPHERICAL GEARS
John H. Hitchcock, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a corporation of Massachusetts
Application May 4, 1943, Serial No. 485,602
9 Claims. (Cl. 90—4)

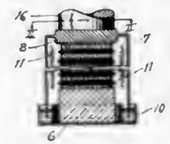
1. A machine for manufacturing spherical gears comprising a work carrier, a tool carrier, means to support a gear blank on the work carrier for rotation about its axis, means to support a helical cutter on the tool carrier for rotation about an axis inclined to the plane of rotation of the blank at an angle equal to the helix angle of the cutter, driving means to rotate the blank and the cutter at relative speeds inversely proportional to the ratio of the number of teeth to be cut to the number of threads in the cutter, means to move one of the carriers in a general direction parallel with the axis of the blank, and a link connecting the two carriers and extending parallel with the line joining the center of the cutter and the center of the blank, the link having an effective length equal to the length of the said line, the link serving to move one of the carriers in such a manner as to maintain a fixed distance between the center of the cutter and the center of the blank.



2,473,710
ROTARY DRIER SEAL
Lyman W. Jillson, Detroit, Mich., assignor to Wyandotte Chemicals Corporation, Wyandotte, Mich., a corporation of Michigan
Application March 16, 1945, Serial No. 583,074
2 Claims. (Cl. 285—10)

1. A seal for the joint between fixed and rotating parts of a rotary dryer and the like, comprising rotating and non-rotating annular bearing rings each carried by one of said parts and contacting each other in a radial plane with respect to the axis of said rotating part, axially extending and mutually overlapping flanges fixed to each of said rings, mounting studs attached to said non-rotating ring and having axial and radial movement connection with said fixed part,

compression springs connected to said studs for urging said non-rotating ring toward said rotating ring, a flexible fabric tube attached at one end to said axially extending flange on said non-rotating ring and attached at the other end to another axially extending flange on said fixed part.



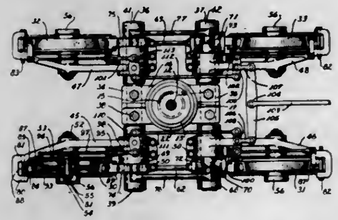
2,473,711
ROTARY PUMP AND MOTOR HYDRAULIC TRANSMISSION SYSTEM
Bernard A. Kearns and Jacob Decker, Cincinnati, Ohio, assignors to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a corporation of Ohio
Application December 3, 1941, Serial No. 421,464
32 Claims. (Cl. 60—53)

1. In a grinding machine, the combination with a bed, of a member translatable on the bed, and means for effecting translation of said member including a hydraulic motor coupled for translation of the member, a first actuating means for the hydraulic motor including a pressure pump, conduits coupling the pump with the hydraulic motor, means for determining the rate and direction of flow of the pressure medium from the pump to the motor, a second source of hydraulic pressure medium, a servo-valve mechanism for determining the rate and direction of flow of the hydraulic medium from said second source, and means for selectively coupling the pump conduits or the servo-control mechanism with the hydraulic motor for control of the actuation thereof and thus the relative translatory movement of the member relative to the bed.

11. In a hydraulic actuating system of the character described, the combination with a variable delivery pump, of means for determining the effectiveness of said pump including a pump adjuster, power actuable means for shifting said adjuster, a blocking device for restricting the movement of the power adjusting means, tarry mechanism for determining the effective period of the blocking device, and means independent of the tarry mechanism for determining the rate of acceleration effectable by the power adjusting means on release of the blocking device.

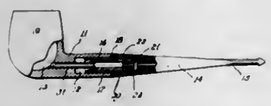
2,473,712
PROCEDURE FOR MAKING MULTIPLY METAL STOCK
Joseph Kinney, Jr., Bradford Woods, Pa., assignor to American Cladmetals Company, a corporation of Pennsylvania
Application July 24, 1944, Serial No. 546,377
8 Claims. (Cl. 29—189)

1. A method of making multi-ply metal in which the component metals are austenitic stainless steel and oxygen-free copper; which consists in separately rolling a quantity of each such metal to sheet-like form and to substantially final gauge, the stainless component being about 0.010'' thick and the copper component being about 0.030'' thick; cutting a piece of metal to final form from each portion of sheet-like material so rolled; processing at least one surface of each such piece to provide an oxygen-free surface on the copper piece and a uniform coating of nickel, of a thickness not to exceed 0.0005'', on the stainless steel piece; forming a multiply assembly by matching such pieces with their processed faces in contact throughout substantially the entire extent of each such piece; then forcing and holding the pieces so assembled in intimate contact under a pressure of at least 500 p. s. i. while subjecting them to heat so proportioned as to temperature and so applied as to time as to anneal said stainless steel and form a fusion bond between the pieces of such assembly.



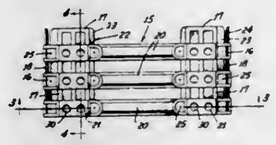
2,473,713
WELL FLUID MEASUREMENT
Benson M. Kingston, Breckenridge, and Mark H. McKinsey, Midland, Tex., assignors, by direct and mesne assignments, of one-half to Shell Development Company, San Francisco, Calif., a corporation of Delaware, and one-half to The Independent-Eastern Torpedo Company, Breckenridge, Tex., a corporation of Ohio
Application May 20, 1946, Serial No. 671,044
5 Claims. (Cl. 73—151)

1. In a system for determining the characteristics of a fluid in a well, the combination of an



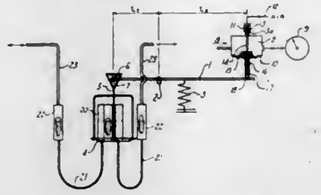
insulated conductor cable, a detector housing adapted to be lowered into a well attached to the lower end of said cable, two electrodes insulated from each other carried by said housing in contact with the well fluid, means comprising a source of current in said housing having its terminals connected to said electrodes for passing a direct current between said electrodes through the fluid surrounding said electrodes, means in said housing electrically connected to the conductor cable for converting said direct current into electrical oscillations, indicator means inductively coupled with the upper end of the cable at the surface for indicating said oscillations, and depth meter means at the surface for measuring the depth of said housing in correlation with the indicated oscillations.

2,473,714
RAIL TRUCK SUSPENSION
Alvin S. Krotz, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application July 3, 1945, Serial No. 603,051
14 Claims. (Cl. 105—182)



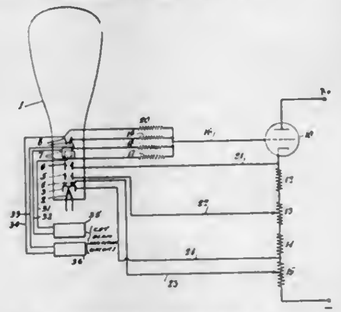
5. A truck for a rail-type vehicle, said truck comprising a center bearing for pivotally supporting a car, a resilient spring structure, a torsion arm carried by said spring structure, a rail wheel rotatably mounted on said arm, and means for adjustably securing said torsion arm to said spring structure with respect to said center bearing in a plurality of positions laterally of said truck.

2,473,715
SMOKER'S PIPE
David P. Lavietes, Brooklyn, N. Y.
Application November 23, 1944, Serial No. 564,760
2 Claims. (Cl. 131—225)



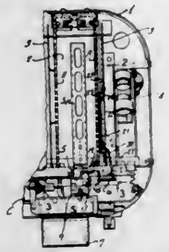
2. A smoker's pipe comprising a bowl having a shank with a socket and a smoke passage, a bit having a flattened bite at one end and a recess at its other end and a smoke passage, adjustable connecting means between the bit and the shank of the bowl comprising an internally screw-threaded member fixed in the socket of the shank of the bowl and having a flange abutting against the end of the shank around the rim of the socket, and an externally screw-threaded member mounted in the recess in the bit for seating in the internally screw-threaded member of the shank, said externally screw-threaded member having a flange engaging the flange on the internally screw-threaded member when the parts are assembled, and a cylindrical portion, friction means surrounding and frictionally engaging said cylindrical portion within said recess, means permanently securing said friction means to the wall of the recess, and an element secured to said externally screw-threaded member and having a shoulder engaging said friction means and preventing withdrawal of said externally screw-threaded member from said friction means.

2,473,716
FLEXIBLE AMMUNITION CHUTE
Howard B. Lewis, Venice, and Glen M. Larson, Hollywood, Calif.
Application May 25, 1943, Serial No. 488,384
16 Claims. (Cl. 193—25)



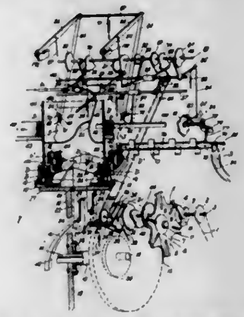
1. An ammunition chute comprising: a series of sheet metal links loosely associated with each other; means at the ends, top and bottom of each link for extensibly connecting said links together and for limiting the movement between said links; and a plurality of leaves mounted on each link, the leaves on each link overlapping and slidably engaging the leaves on the next adjacent link.

2,473,717
PRESSURE TOTALIZING DEVICE
Alfred A. Markson, Mount Lebanon, Pa., assignor, by mesne assignments, to Hagan Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application June 22, 1944, Serial No. 541,645
3 Claims. (Cl. 73—405)



1. The system of totalizing and subtracting fluid pressures comprising a weigh beam having a plurality of liquid containers supported on one end thereof and having a pneumatic balancer acting upon the beam at the other end thereof, fluid containers stationarily mounted and connected to said first named containers by a flexible conduit at the bottom of said containers to establish communication of the fluids in said containers, said second named containers having connection above the liquid level with sources of variable pressure, and a pressure gauge connected to said pneumatic balancer for indicating the total value of the pressure of said variable pressure sources.

2,473,718
OSCILLOGRAPH CIRCUIT TO AVOID DISTORTION
Meyer Maron, Passaic, N. J., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
Application September 21, 1946, Serial No. 698,487
8 Claims. (Cl. 315—24)

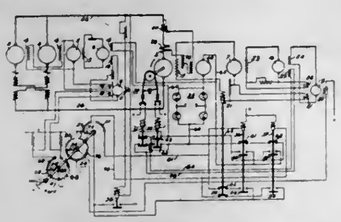


1. An oscillograph comprising a cathode-ray tube, having pairs of deflection plates and a first and a second anode, and means comprising a vacuum tube and a resistor between each one of said plates and the grid of said vacuum tube to maintain said second anode substantially at the average potential of said plates, said means including a connection between the cathode of said vacuum tube and said second anode.

2,473,719
AUTOMATIC TOASTER
Paul J. McCullough, St. Louis, Mo., assignor, by mesne assignments, to The Toastswell Company, Incorporated, St. Louis, Mo., a corporation of Missouri
Original application May 12, 1943, Serial No. 486,641. Divided and this application November 23, 1945, Serial No. 630,487
4 Claims. (Cl. 219—19)

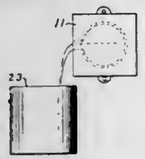
1. In a toaster, a plate like heater, a partition closely associated with but spaced from said heater and forming a side of a toasting compartment, said partition having an elongated aperture, a strip extending abreast of and overlapping the boundaries of said aperture and positioned between said heater and said partition, a thermostat including an elongated bar secured at one end to said strip and being free at its other end to move to and from said strip into and out of said heating compartment through said aperture, the free end of said bar being adapted when cooled to lie near said strip and within said compartment and when heated to move away from said strip and outside of said compartment, and a timing mechanism controlled by said thermostat.

2,473,720
APPARATUS FOR FORMING WOODEN SPOONS FROM BLANKS
Stephen F. Montague, Oswego, N. Y., assignor, by mesne assignments, to The Diamond Match Company, New York, N. Y., a corporation of Delaware
Application September 17, 1943, Serial No. 502,744
15 Claims. (Cl. 144—2)



8. In an apparatus of the character described; a plurality of die couples mounted for movement along a predetermined path, means for introducing blanks into the die couples in succession at one point in said path, means for thereafter closing the die couples in succession, means at a point further along said path for thereafter opening the die couples in succession to permit of removal of the blanks formed by the closing thereof, a revolving turret having a plurality of gripper plungers mounted to reciprocate toward and away from the die couples and each of which carries a blank gripper, means for rotating said turret to bring the plungers selectively into alinement with the die couples as they come to the removal point of the formed blanks, and means for reciprocating the plungers selectively to cause the grippers thereof to engage and remove the formed blanks from said die couples.

2,473,721
CURRENT LIMITING SYSTEM FOR WARD-LEONARD DRIVES
Terryl B. Montgomery, Wauwatosa, and Thomas H. Bloodworth, Waukesha, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application December 18, 1943, Serial No. 514,797
12 Claims. (Cl. 318—154)



1. A control system comprising in combination an adjustable voltage generator, an electric motor having its armature connected across the armature of said generator, means for controlling the current exchanged between said motor and said generator comprising a first dynamo electric machine connected to supply excitation current to said generator and a second dynamo electric machine connected to supply excitation current to said motor, means for controlling said dynamo-electric machines during speed change of said

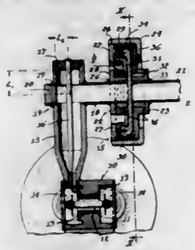
motor to cause said excitation currents to be available in a value in excess of that necessary to supply maximum safe current to said motor, limit means controlled in accordance with the current exchanged between said motor and generator for limiting said current to said predetermined maximum safe value, and means for selectively connecting said limit means so as to operably effect limitation of said supply of field excitation to said motor or said supply of field excitation to said generator.

12. In a control system, the combination of a generator comprising an armature and a field winding, a motor comprising an armature connected to said generator armature and a field winding, means for supplying excitation current to said generator field winding, means for supplying excitation current to said motor field winding, a control device actuable into a plurality of generator field control positions for varying the value of said generator field excitation current to vary the speed of said motor in one direction of rotation, said device also being actuable into a plurality of motor field control positions for varying the value of said motor field excitation current to further vary the speed of said motor in said direction of rotation, limit means responsive to rise of the magnitude of the current flow through said armatures above a predetermined value, and means including an element actuable in response to movement of said control device from one of said generator field control positions into one of said motor field control positions and including means responsive to a measure of said generator field excitation for operatively connecting said limit means to said motor excitation current supply means to modify the action of said control device, whereby the current flow through said armatures is limited to substantially said predetermined value.

2,473,722
MOLDING HOLLOW ARTICLES
Alex A. Nelson, Pleasant Ridge, Mich.
Application September 29, 1945, Serial No. 619,279
3 Claims. (Cl. 18—55)

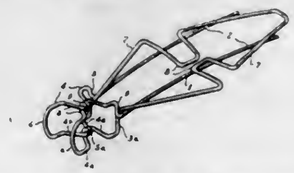
1. The method of making hollow colored flexible articles which consists in, taking a split mold having cooperative cavities between the two parts of the mold in simulation of the article to be formed and providing a sprue passage opening from one side of the mold, heating the mold, spreading over the cavity surfaces of the mold a material of putty-like or semi-fluid consistency, applying color pigments upon the coating so formed, positioning the two parts of the mold snugly together with the cavities thereof in cooperative relation, pouring into the mold some of the material thinned with a suitable vehicle to form an inner coating, pouring out of the mold such thinned material as remains unattached subjecting the mold to heat for sealing together and curing the molded article, and opening apart the parts of the mold for removing the molded article.

2,473,723
METHOD OF MAKING PROSTHESIS
Alex A. Nelson, Pleasant Ridge, Mich.
Application November 5, 1945, Serial No. 626,791
4 Claims. (Cl. 18—55.05)



1. The method of making hollow artificial body members for prosthesis which consists in, providing a split mold having cooperative cavities between the two parts of the mold and opposed faces forming sharp mold replicas of the natural surfaces for prosthesis in simulation of the member to be copied and opening from one side of the mold, heating the mold up to about 150° F., spreading over the cavity surfaces of the mold a plasticized puttylike vinyl plastic material which tends to flow as it is heated, applying color pigments upon the interior surface of the coating so formed in simulation and configuration of veins, blemishes and other natural features corresponding to the surface replica, positioning the two parts of the mold snugly together with the cavities thereof in cooperative relation and the opening upward, pouring into the mold some of the vinyl plastic material thinned with a suitable vehicle and forming therewith a backing interface entrapping the pigmented features of the interior, pouring such thinned material out of the hollow article thus formed, subjecting the mold to heat of about 250–350° F. for curing and sealing the molded article, and opening the two parts of the mold apart for removing the molded member.

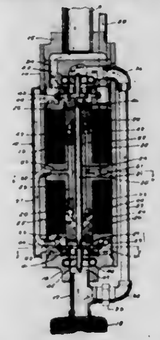
2,473,724
ULTRA HIGH FREQUENCY COUPLER BETWEEN CONTIGUOUS ENDS OF ALIGNED WAVE GUIDE SECTIONS
Ernest C. Okress, Montclair, and Alfred H. Laidig, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 24, 1943, Serial No. 503,628
4 Claims. (Cl. 178—44)



1. A cavity joint comprising contiguous wave guide sections each having its walls aligned with the walls of the other section, a coupling member on each said section on the contiguous ends thereof, and a dielectric capping means between said members and sealed with respect to one of the same and extending across the contiguous ends of both of the wave guide sections, one of said

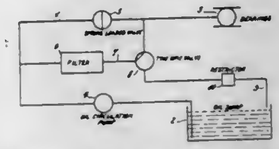
members providing a slot opening toward the said dielectric capping means a distance from the

wall of the wave guide section substantially equal to a quarter wave length in the dielectric.



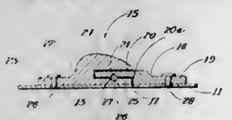
2,473,725
HAIR CLIP
Emile Oswald, Rockaway Park, N. Y.
Application July 23, 1948, Serial No. 40,265
6 Claims. (Cl. 132—46)

1. A hair clip for pin curls comprising: wire bent to form upper and lower jaws with the base of each jaw offset to a point beyond the outer face of the other jaw and there formed into a finger piece, both finger pieces being united at their ends opposite the jaws by an integral spring spacer adapted to be flexed for the purpose of opening and closing the jaws, the lower jaw being in the form of substantially parallel arms shaped to substantially conform to the shape of the human scalp and the upper jaw being in the form of a loop of greater width than the lower jaw and the sides of which loop are drawn in intermediate ends of the loop to form reentrant portions extending toward one another and curved downwardly between the arms of the lower jaw.



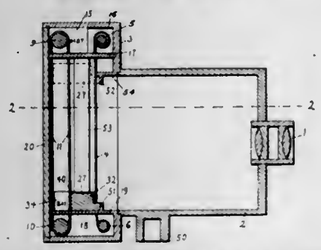
2,473,726
ELECTRIC PUMP
William Harvey Payne, Hinsdale, Ill., assignor to W. Harvey Payne & Co., Chicago, Ill., a corporation of Illinois
Application December 28, 1946, Serial No. 719,016
6 Claims. (Cl. 103—6)

1. The combination in an electric pump, of two solenoid coils in axial alignment, each of said coils having a magnetic circuit individual thereto, including a core member which is common to both said coils, a piston rod extending axially through said core member and coils and reciprocatable lengthwise, two plunger-armatures individual to said coils and attached to opposite ends of said piston rod, said plunger-armatures being adapted to function as pistons, a cylinder for each of said plunger-armatures, each of said cylinders having a liquid chamber at one side of its plunger-armature and a gas chamber at the other side of its plunger-armature, means defining a discharge chamber, inlet and outlet valves for each of said liquid and gas chambers, said outlet valves providing communication between said discharge chamber and said liquid and gas chambers, the



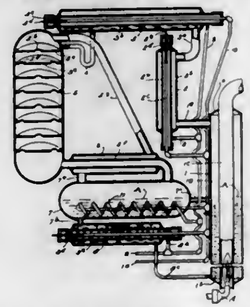
inlet valves to said liquid chambers being adapted to be connected to a source of liquid, the inlet valves to said gas chambers being adapted to be connected to a source of gas, the arrangement being such that both liquid and gas are pumped into said discharge chamber to effect therein a compressible mass of liquid and entrained gas.

2,473,727
OIL FILTERING APPARATUS
Edward Roker Robertson, St. Margarets-on-Thames, Twickenham, England, assignor, by mesne assignments, to Fram Corporation, East Providence, R. I., a corporation of Rhode Island
Application February 18, 1944, Serial No. 522,930
In Great Britain May 4, 1943
12 Claims. (Cl. 210—183)



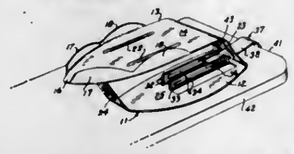
1. Oil filtering apparatus adapted to be used for full-flow or by-pass filtration, said apparatus comprising an oil inlet, a first oil outlet delivering oil to a part to be lubricated, a passageway communicating with the oil inlet and with the oil outlet, a spring loaded valve operative in response to a predetermined pressure for controlling flow of oil through said passageway, a filtering circuit connected in shunt across the valve, filter means in said filtering circuit, an oil reservoir, means for returning oil from said reservoir to said oil inlet, a second oil outlet delivering oil to said reservoir, a second passageway communicating directly with the said filtering circuit on the outlet side of the filter means and also communicating with the second oil outlet, and means controlling the flow of oil from the filter means to the first and second passageways whereby the whole of such oil may be passed either to the first outlet or to the second outlet.

2,473,728
STRUCTURAL JOINT
John E. Rutledge, Normandy, Mo., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application April 20, 1944, Serial No. 531,925
4 Claims. (Cl. 189—36)



1. In stressed skin aircraft construction, a pair of abutting thin wall skin surfaces, a channel element attached to a first of said surfaces extending longitudinally along its line of abutment, an offset tongue element fastened to the second said skin surface projecting beyond the edge thereof and engaged closely within the channel portion of said first element, the walls of said channel element being of the same depth laterally of the joint as said offset tongue, the mating surfaces of said channel and tongue elements being substantially parallel to said skin surfaces at the joint, grooves in said tongue and in one of said channel walls, and a rigid elongated locking element inserted longitudinally between said mating tongue and channel elements within said grooves adapted to prevent lateral separation of said abutting skin surfaces, and said tongue and channel elements relieving said skin surfaces of bending both laterally and longitudinally of said line of abutment.

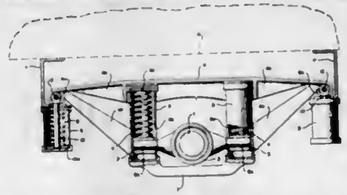
2,473,729
COLOR FACSIMILE APPARATUS
Max Salz, New York, N. Y.
Application July 31, 1945, Serial No. 608,078
6 Claims. (Cl. 178—5.2)



1. In a device for producing permanent facsimiles of projected pictures, a picture carrier having a color receiving surface, a container having a narrow outlet positioned close to said surface, a finely dispersible substance confined in said container, extending close to said outlet and consisting of coloring particles adapted to be moved through said outlet, a photo-electric cell having a pole with a voltage depending on the intensity of light received by said cell, said pole being positioned so near to said outlet that said voltage influences those of said particles which are nearest to said outlet whereby said voltage exerts a moving force on said latter particles, and means to move said container and said cell parallel to said surface with said outlet and said pole remaining in the same position relatively to each other, and an optical system projecting an image on a plane in which said cell moves.

2,473,730
REFRIGERATING MEANS
John F. Saye, Powersite, Mo.
Application April 23, 1947, Serial No. 743,405
5 Claims. (Cl. 62—119.5)

1. In a refrigerating means of the class described the combination of a generator containing aqueous ammonia, a heater for said generator, a rectifier above said generator and communicating therewith having cold water inlet means and a thermostatic throttling outlet valve arranged to provide indirect heat conduction from ammonia to said water, a condenser communicating with the upper end of said rectifier having cold water inlet and thermostatic throttling valve outlet for cooling ammonia therein by indirect thermal conduction of heat from said ammonia to said water.



2,473,731
IRON HOLDER
Stanley Y. Shepard, Sr., Atherton, Calif.
Application September 15, 1947, Serial No. 773,952
2 Claims. (Cl. 248—117.1)

2. An iron holder comprising a base, an upper plate supported in spaced relationship to said base, a guide on said base comprising a pair of spaced elongated strips disposed normally to said base; each of said strips having an elongated slot therein, a spring handle clamp consisting of a loop portion for receiving the end of a work table or ironing board and a slotted straight portion, and a retaining pin disposed transversely of said clamp and extending through the slot of the straight portion thereof as well as through the elongated slots of said strips to effect slidable mounting of said clamp on the holder.

2,473,732
VEHICLE SPRINGING ASSEMBLY
Clark C. Shilling, San Diego, Calif.
Application July 23, 1946, Serial No. 685,707
3 Claims. (Cl. 267—60)

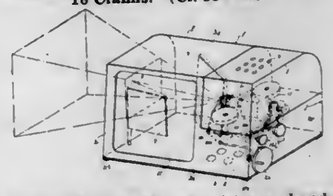
1. In a vehicle springing assembly of the class described, the combination with a conventional vehicle frame and axle of laterally extending opposed trunnion portions in connection with said axle, springs engaging the upper portions of said trunnion portions, a bridge extending laterally at opposite sides of said axle above the same and supporting said springs, secondary springs outwardly of said first mentioned springs supported by said frame and engaged by opposite ends of

said bridge, plungers internally of said second mentioned springs pivotally connected to opposite ends of said bridge, casings supporting said second mentioned springs secured to said frame, and casings for said first mentioned springs secured to said bridge having slotted portions in the side walls thereof in which said trunnions are reciprocally mounted.

2,473,733
SYRINGE
Arthur E. Smith, Los Angeles, Calif.
Application May 31, 1947, Serial No. 751,517
6 Claims. (Cl. 128—220)

1. A disposable syringe including an ampule having a plunger slidable therein, said plunger comprising an elongated body having a forwardly extending reduced portion, a piston having a recess receiving said reduced portion, a stopper in said ampule, said stopper having an axial bore, an auxiliary stopper adjacent to said first stopper, said auxiliary stopper having aligned inner and outer recesses with a diaphragm therebetween, and a front member in advance of said stopper, said first front member having a finger engaging shoulder thereon, said front member having a bore with a diaphragm closing the inner end of said bore, and a needle in said bore and having its inner end disposed in the outer recess of the auxiliary stopper and spaced from the auxiliary stopper diaphragm.

2,473,734
HYPODERMIC SYRINGE
Arthur E. Smith, Los Angeles, Calif.
Application May 31, 1947, Serial No. 751,591
4 Claims. (Cl. 128—220)



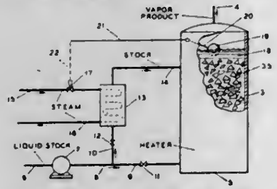
1. A disposable syringe including an ampule having a plunger slidable thereon, a piston on said plunger, a stopper in said ampule remote from said piston, said stopper having an outwardly opening recess therein and having an interiorly opening recess coaxial with the outward opening recess, a diaphragm separating said recesses, a front member on said ampule, said front member having a finger engaging shoulder thereon, said front member having an inwardly directed tip thereon disposed in said outwardly opening recess of said stopper, said front member having a forwardly projecting tip thereon, said front member having a bore extending through said forward tip and terminating short of the inner end of said inwardly extending tip, a needle slidable in said bore and having its inner end extending through and projecting beyond said inwardly extending tip, said needle having a protuberance spaced from said tip, and a flexible cap about the outer end of said needle and seated on the forwardly projecting tip on said front member.

2,473,735
MANUFACTURE OF COMPLEX ORGANIC ANTIMONY COMPOUNDS
William Solomon, London, England, assignor to Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y., a corporation of New York
No Drawing. Application December 5, 1946, Serial No. 714,143. In Great Britain March 24, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 24, 1962
4 Claims. (Cl. 260—446)

1. A process for the manufacture of organic derivatives of quinquevalent antimony consisting in reacting together in approximately molecular proportion in the cold a compound selected from the group of compounds consisting of pentahalides of antimony and alcoholates of pentahalides of antimony and an aqueous solution of a compound selected from the group consisting of aliphatic hydroxycarboxylic acids, hydro-aromatic hydroxycarboxylic acids and alkali and alkaline earth metal salts of said acids followed by heating to complete the reaction, neutralisation with an alkali selected from the group consisting of alkali metal alkalies and alkaline earth metal alkalies to yield a salt of a reaction product of the antimony pentahalide with the hydroxy-carboxylic acid, and separation of the said salt.

2,473,736
MICROFILM READER AND PROJECTING APPARATUS
Nathan Sally Stern, New York, N. Y.
Application May 22, 1946, Serial No. 671,625
16 Claims. (Cl. 88—24)

1. A microfilm reader comprising a closed casing composed of a base, of sidewalls and of a top, a screen in a sidewall, a light source, a film holding, film transporting and projecting unit supported on said base to produce an enlarged film image, two mirrors positioned on said base in adjacent relationship with said film holding, transporting and projecting unit, the first mirror being so located in the path of the light rays as to reflect said film image onto the second mirror, said second mirror being so located as to direct



said film image onto said screen, a vertical pivot supported on said base, said first mirror being rotatably mounted by means of said pivot, and means operable from outside said casing to turn said mirror about a vertical axis and to accordingly displace said film image on said screen in a horizontal direction.

2,473,737

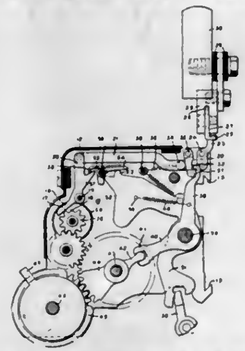
LEVEL CONTROL IN PACKED TOWERS

Joseph E. Storment, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Application March 18, 1944, Serial No. 527,121
10 Claims. (Cl. 202—72)

4. Apparatus of the class described comprising in combination an evaporating tower having an outlet for vapor, means to heat said tower, a liquid stock supply line, pumping means in the liquid stock supply line, said supply line having two branches, a valve in each branch controlling flow therethrough, one of said branches communicating with said tower at a lower level, the second of said branches communicating with said tower at a higher level, a heater in the second of said branches, a steam supply line communicating with said heater, a valve in said steam supply line controlling flow therethrough, a float in said evaporating tower disposed to float at substantially the liquid level from a level lower than to a level higher than a desired liquid level, and transmission means between said valve in said steam supply line and said float disposed so that movement of said float upwardly opens said valve in said steam line whereby the liquid level in said tower will be maintained substantially at said desired level by evaporation.

2,473,738



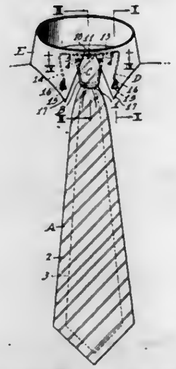
RECORDING AND COMPUTING MACHINE

Emil F. Thierfelder, Ilion, N. Y., assignor to Remington Rand Inc., Buffalo, N. Y., a corporation of Delaware

Application August 10, 1944, Serial No. 548,909
21 Claims. (Cl. 235—59)

1. In a machine of the class described, a normally open add-1 circuit, a totalizer having a plurality of numeral wheels, a sensing element respectively associated with each of said numeral wheels, means on the wheels to cause the movement of said sensing elements as the wheels move to and from a predetermined position, means including a movable finger associated with each of said sensing elements and adapted when effective to close said circuit, and means connecting each finger with its respective sensing element whereby the movement of the numeral wheels will move said fingers relatively to effective positions.

6. In a computing and printing machine having, a frame, a to and fro travelling carriage, and a totalizer mounted on said carriage, the combination of an add-1 circuit, an add-1 relay, a contact plate, a control circuit connected through said contact plate for energizing and deenergizing said add-1 relay to open and close said add-1 circuit, a plurality of numeral wheels, a plurality of sensing elements respectively associated with the wheels, means on the wheels to cause the movement of said sensing elements as the wheels move to and from a predetermined position, a plurality of fingers projecting from the totalizer, means connecting each finger with a sensing ele-



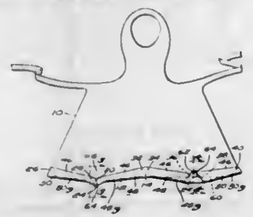
ment whereby the movement of the sensing elements will move the fingers from effective to ineffective positions, said fingers adapted to contact with said plate to close said control circuit when disposed in their effective positions relative to said control circuit and to be out of contact to open said circuit when disposed in their ineffective position relative to said control circuit whereby said add-1 circuit is opened and closed respectively.

2,473,739

COMBINED COLLAR HOLDER AND TIE SUPPORTER

Stanley M. Wade, Benicia, Calif.

Application May 14, 1946, Serial No. 669,681
4 Claims. (Cl. 2—150)



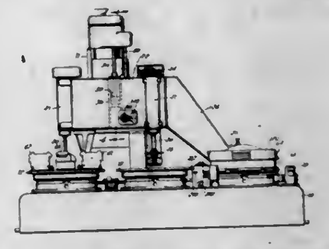
1. In combination, an elongated tie looped back on itself substantially at its midpoint to provide a front portion and a rear portion, the front portion having a transversely-extending pleat spaced from the loop, the sides of the front portion adjacent to the pleat extending rearwardly to enclose the rear portion and being secured together, thereby forming what papears to be a tie knot, and means for securing the tie to a collar for holding the looped portion in the center of the collar crotch, said means comprising an inverted U-shaped frame with the cross bar of the inverted U extending through the tie loop and the sides of the U constituting legs that underlie the collar corners and are provided with pointed ends to penetrate the collar corners for holding them in position and for holding the cross bar adjacent to the collar fold, whereby the cross bar will position the tie loop at the top of the collar crotch.

2,473,740

WATERPROOF GARMENT

Edward Welch, Valley Falls, R. I.

Application March 29, 1946, Serial No. 658,314
2 Claims. (Cl. 2—48)



1. A waterproof garment having a depending skirt having a lower edge having substantially hemi-circular spout forming portions projecting downwardly centrally of each side thereof and vertically aligned cooperating male and female separable fastener elements having walls exterior of said garment adapted to abut when fastened, to space apart portions of the garment connected thereby, secured to the lower portion of said garment, certain of said elements being secured in spaced relationship adjacent the lower edge of said garment adjacent the center portions of the rear and front thereof, on said spout forming projections and on each side of each spout forming projection and the cooperating vertically aligned separable fastener elements adjacent each center and end being secured at a substantially greater vertical distance above their cooperating elements than are the cooperating separable fastener elements for the spouts and the cooperating separable fastener elements on each side of said spouts and the cooperating separable fastener elements for the spouts being secured at a substantially greater vertical distance above their cooperating elements than are the cooperating separable fastener elements on each side of said spouts so that when the lower portions of said garment between said center portions and spouts are outturned, upturned and fastened to said garment except at the spouts, water catching gutters having open water receiving top portions are provided downwardly inclined from each center portion to each spout portion and the spout portions are raised upwardly to a substantially horizontal position discharging the water from said inclined gutters laterally of the wearer's shoes and clothes and when said spout separable fastener elements are fastened water catching reservoirs of inverted frusto triangular shape are provided between front and rear ends of said gutters for temporarily holding amounts of water.

2,473,741

PATTERN CONTROLLED MILLING MACHINE

Warren Wilder and Herman Horlacher, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio, a corporation of Ohio

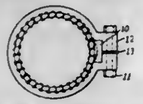
Application November 6, 1943, Serial No. 509,310
27 Claims. (Cl. 90—13.5)

1. In a skip profiling machine, the combination with a rotary table adapted to support a plurality of work pieces in equally spaced relation about the periphery thereof, of a cutter supported for working in a plurality of planes perpendicular to the axis of table rotation, power operable means for moving the cutter toward and from the work in any of its working planes, means for governing operation of said power operable means including a tracer, a pattern supporting table, a plurality of sets of patterns spaced about the periphery of the pattern supporting table in corresponding relation to the spacing of the work there being a pattern in each set for each operating plane of the cutter, means to effect synchronous rotation of said tables to effect a pattern controlled milling operation on each work piece during one revolution of the tables, and means automatically operable after each rotation of the table to effect relative indexing of the cutter and tracer with respect to said tables to a new working plane, to effect a second pattern controlled milling operation on the work in spaced relation to the first operation upon the next rotation of the tables.

2,473,742

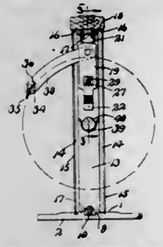
INFLATION INDICATOR FOR CATHETERS

John M. Auzin, Warwick, R. I., assignor to Davol Rubber Company, a corporation of Rhode Island



Application December 28, 1944, Serial No. 570,508
3 Claims. (Cl. 128—349)

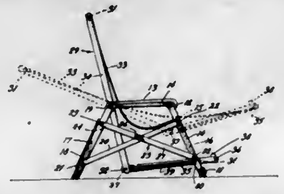
1. A catheter construction comprising a body portion having a drainage passageway therethrough, the distal end of the body portion having a drainage eye communicating with the drainage passageway, an inflatable balloon on said body portion adjacent the distal end, an inflation conduit having an inlet connection and communicating with said balloon, and an inflatable indicator device mounted on the body portion at the other end thereof and having a plurality of inflatable elements each communicating with said inflation conduit, whereby said



indicator device sections are inflated when the balloon is inflated and are deflated when the balloon is deflated.

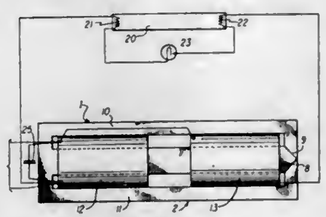
2,473,743
ANTIFRICTION SCREW AND NUT
William B. Barnes, Muncie, Ind., assignor to Barnes Motor Developments Company, a partnership
Application February 19, 1945, Serial No. 578,600
1 Claim. (Cl. 74—459)

A nut and screw structure comprising a nut member and a screw member, one of said members having a helical channel therein having a raceway connecting the ends of the helix and the other having a screw channel therein, friction reducing balls mounted in said channels and means for varying the diameter of said nut member.



2,473,744
PAPER ROLL HOLDER
Elvah O. Bulman, Grand Rapids, Mich.
Application April 7, 1947, Serial No. 739,776
3 Claims. (Cl. 242—55.5)

1. In a paper roll holder, a supporting frame including two spaced apart standards, a base supporting member at the lower end of each standard, said standards and base supporting members having parts slightly spaced from each other, means for connecting such standard to its base support including bolts and nuts, the bolts passing through said spaced parts of said standards and supporting members, said parts being yieldingly resistant and sprung towards each other and exerting pressure upon the bolt heads and nuts to prevent relative movement of the bolts and nuts with respect to each other, a transverse bar across the upper ends of the standards, bolts passing through said standards and the upper ends of the bar, said upper ends of the standards having yieldingly resistant portions spaced from the bar deformed by the bolt connections and nuts on the bolts to exert deforming pressure on said yielding portions.

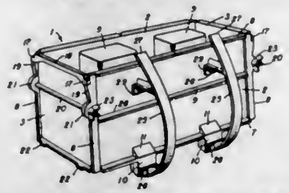


2,473,745
CHAIR
Alfred Di Renzo, Passaic, N. J.
Application November 15, 1945, Serial No. 628,877
12 Claims. (Cl. 155—106)

1. A chair comprising a supporting portion comprising spaced connected side frames, a back frame pivoted thereon and extending below the top of the supporting portion, a member pivoted to the lower portion of the back frame and slidably associated with the supporting portion to extend forwardly in a sitting position in a major extension below the supporting portion and adapted to move upwardly and forwardly toward a position tending to align with the back frame

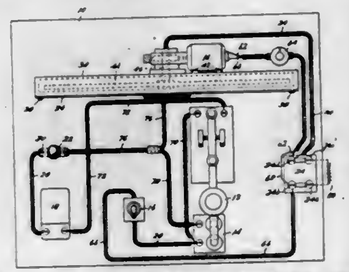
when the latter is swung rearwardly and downwardly to a reclining position, a cross bar between the upper portions of the side frames at the front, and a flexible supporting member extending between and anchored to the upper end of the back frame and near the forward end of the member pivoted to the lower portion of the back frame to rest on the cross bar.

2,473,746
TRANSFORMER
Ernest H. Freeman, Wilmette, Ill., assignor to Hirsch Epstein and Louis R. Duman, Chicago, Ill.
Application June 24, 1946, Serial No. 678,785
1 Claim. (Cl. 171—119)



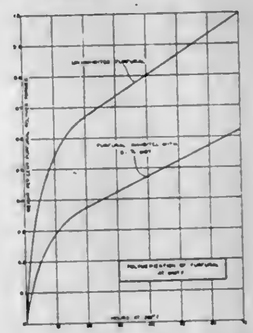
A transformer for a discharge tube load comprising a single primary winding and a single secondary winding spaced from the primary and electrically connected thereto in step-up auto transformer relationship, a magnetic core for said windings, said core comprising a stack of elongated rectangular flexible laminations, each lamination having longitudinal and transverse sides and a central longitudinally extending leg integral with only one of the transverse sides of the lamination and separate from the other transverse side of the lamination and located between and parallel to the longitudinal sides of the lamination and extending through both of said windings whereby the windings are embraced by the core on opposite sides of the longitudinal center of the core, the longitudinal sides of each lamination and the central leg thereof being free of projections between the windings thereby permitting sliding of the central leg through the windings to assemble the core through the windings.

2,473,747
ART OF PRESERVING AND MAINTAINING COLOR OF GREEN VEGETABLES
Leonard F. Gieseker, Preble, Ind.
No Drawing. Application April 19, 1948, Serial No. 21,859
8 Claims. (Cl. 99—186)



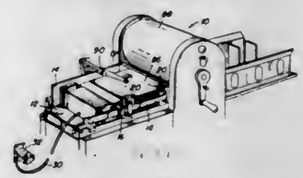
1. A method of preserving the color of canned green vegetables which method consists in soaking the vegetables in a dilute solution of ammonium hydroxide prior to canning.

2,473,748
PORTABLE MOLD FOR CONCRETE BLOCKS
Edwin F. Green, Ashland, Ky.
Application July 8, 1947, Serial No. 759,571
3 Claims. (Cl. 25—121)



1. A mold box for building blocks adapted to be stood upright for filling with moldable material and to be stripped of molded material by inverting and lifting the same, a pair of rockers on one side of said box for rocking said box into inverted position for lifting inverted, and end plates in said box slidable partway out of the same when the box is lifted in inverted position to thereby guide lifting of the box relative to the molded material.

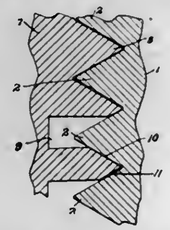
2,473,749
TELEGRAPHIC CODE TEACHER
Harold M. Herman, Chicago, Ill.
Application September 4, 1946, Serial No. 694,684
1 Claim. (Cl. 178—115)



A telegraphic code teaching apparatus, comprising a base, a casing mounted in an upright position on the base, a horizontal shaft rotatably mounted in the casing, a disk fixed to the shaft and provided on its periphery with code characters, an electric motor fixed to the casing against one side thereof, gear means establishing a driving connection between the armature shaft of the motor and said first shaft, a telegraph key mounted upon the base at the opposite side of the casing, a part of said key constituting an armature, electro-magnets fixed to the base below the armature, switch means located within the base below the disk having a fixed contact and a pivoted contact, a spring normally holding the movable contact out of engagement with the fixed contact, an arm on the pivoted contact positioned for contact by the code characters of the disk, said characters and spring constituting means ultimately opening and closing the switch, conductors connecting the contacts with the electromagnet and with the current source.

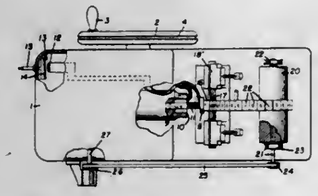
2,473,750
INHIBITING POLYMERIZATION AND CORROSIVENESS OF FURFURAL BY MERCAPTOBENZOTHIAZOLE
John C. Hilliyer, Bartlesville, Okla., and Daniel A. Nicewander, Borger, Tex., assignors to Phillips Petroleum Company, a corporation of Delaware
Application October 23, 1945, Serial No. 624,048
11 Claims. (Cl. 202—39.5)

8. In the extractive distillation of aliphatic C_4 hydrocarbon mixtures containing unsaturated C_4 hydrocarbons in admixture with more saturated C_4 hydrocarbons using furfural containing dissolved water in amount ranging from 1 per cent up to saturation as the selective solvent, the improvement which comprises inhibiting polymerization of the furfural by incorporating therein from 0.01 to 0.50 weight per cent of mercaptobenzothiazole.



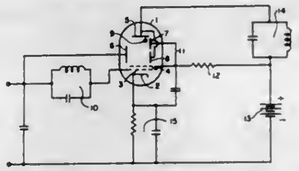
2,473,751
DEVICE FOR EXPELLING STATIC CHARGES FROM DIELECTRICAL SUBSTANCES
Howard R. Johnson, Baltimore, Md.
Application February 24, 1948, Serial No. 10,536
4 Claims. (Cl. 271—18)

1. The method of separating a single sheet of di-electrical substances from a pile thereof com-



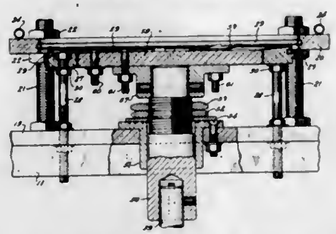
prising, the step of creating a pulsating electromagnetic field adjacent a pile of di-electrical substances for affecting the static charges between the sheets thereof, and then the step of removing a single sheet from the pile.

2,473,752
SELF-LOCKING TAPPET SCREW
Charles E. Johnson, North Muskegon, Mich., assignor to Johnson Products, Inc., Muskegon Heights, Mich., a corporation of Michigan
Application August 19, 1946, Serial No. 691,546
1 Claim. (Cl. 151—14)



A tappet screw having a threaded shank, the inner portion of which is threaded with standard threads, and the outer portion having a continuous helical groove extending inwardly into said shank between adjacent threads deepening the bottom of said threads, said last mentioned threads being offset axially with respect to the threads on the inner portion of said shank, said continuous helical groove between the threads at the outer portion of the shank being of a shape to provide outer threads having inner parallel sides and outer edge portions with inclined outwardly converging sides, said outwardly converging sides of each of said threads toward the inner threaded portion being of greater area than those at the other side thereof.

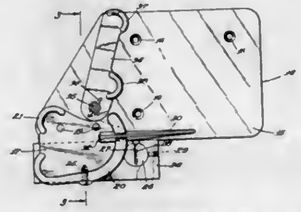
2,473,753
MICROTOME AND ELECTROSTATIC DISPERSAL APPARATUS THEREFOR
Howard R. Johnson, Baltimore, Md.
Application November 20, 1946, Serial No. 711,103
6 Claims. (Cl. 88—40)



1. In combination with a microtome including a cutter as a part thereof, means carried by the microtome for holding a specimen relative to the cutter to be cut by the latter, and means supported on the microtome setting up an alternating magnetic field about the holding means and cutter, and for creating an eddy current in the holding means and cutter.

2,473,754
AMPLIFIER CIRCUITS WITH DOUBLE CONTROL
Johan Lodewijk Hendrik Jonker and Petrus Hubertus Johannes Agnes Kleynen, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application May 9, 1946, Serial No. 668,550
In the Netherlands July 19, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires July 19, 1961
5 Claims. (Cl. 179—171)

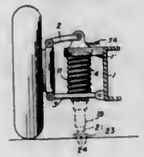
1. An amplifier circuit arrangement, comprising an electron discharge tube having an electron-emitting cathode, a control grid, a screen grid, an electron beam deflection system comprising a first deflection electrode, a second deflection electrode arranged in cooperative association with said first deflection electrode and an anode, means to couple said first deflection electrode to the grid of said tube, means to connect said second deflection electrode to said screen grid, means to apply operating potentials to said tube, means to apply a signal voltage to the control grid of said tube and an output load impedance means connected to said anode.



2,473,755
INDUCTION CAN SOLDERING MACHINE
William Lampiris, Milwaukee, Wis., assignor to Geuder, Paeschke & Frey Co., Milwaukee, Wis., a corporation of Wisconsin
Application August 13, 1945, Serial No. 610,543
2 Claims. (Cl. 219—13)

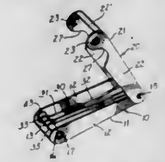
1. In a machine for soldering a circular base joint in a can, a turntable mounted for rotation in a substantially horizontal plane and adapted to receive the base of the can, a single-turn stationary inductance heating coil concentric with the axis of rotation of the table and having a greater diameter than the table and positioned above but adjacent to the plane of the top of the table, a second single-turn stationary inductance heating coil concentric with the axis of rotation of the table but being of smaller diameter than the first mentioned coil and located below said first mentioned coil substantially in the plane of

the table top, and means for energizing said coils to locally heat that portion of the can disposed between said coils and to melt solder placed on the interior of the can.



2,473,756
CUTTING DEVICE
June L. Lehnherr, Newton, Kans., assignor of one-third to Albert I. Kegan, Chicago, Ill.
Application November 27, 1946, Serial No. 712,595
8 Claims. (Cl. 164—73)

1. A cutting device for taking strips from sheets of leather or the like, consisting of: two castings, approximately mirror images of each other, each of said castings including at least one cylindrically surfaced flange extending perpendicularly therefrom; a work-supporting plate fixed between said castings perpendicular to said flanges, said castings extending outwardly over one edge of said plate and spaced apart thereby; a block, with a round hole therethrough, positioned in the space between said castings against said plate edge and flush with one surface of said plate; a screw threaded in one of said castings with the head of said screw bearing against an edge of said block, whereby said block is releasably secured against said plate edge and may be translated therealong and re-secured at a new adjusted position thereagainst; a longitudinally slotted cylinder rotatably journaled in the hole of said block, the top face of said cylinder being flush with said block and said plate; a knife positioned in the slot of said cylinder with a cutting edge perpendicular to said plate and parallel to said cylindrically-surfaced flanges and spaced to the convex sides thereof; an arm having a nethermost straight edge parallel to said plate, said arm projecting from one of said castings in front of said knife; means for raising and lowering said arm with respect to said plate; a second arm pivoted at one end thereof to said plate to the same side of said knife as said cylindrically surfaced flanges, said second arm thus being adapted to sweep over said plate in the area before said knife; a plurality of cylindrical flanges upstanding from the edge of said second arm proximal to said knife; and means for locking said second arm upon its pivot.

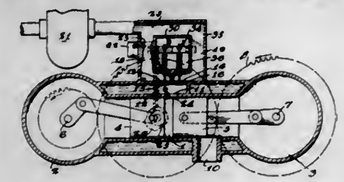


2,473,757
DASH-CONTROLLED HYDRAULIC JACK
James I. Long, Levy, Ark., assignor of twenty per cent to Glen Moody, twenty per cent to Anderson Jones, and twenty per cent to Samuel D. Gray, all of North Little Rock, Ark.
Application February 7, 1947, Serial No. 727,226
1 Claim. (Cl. 254—86)

The combination in a vehicle chassis having coil spring wheel suspension means, comprising a substantially vertical coiled suspension spring, a portion of the chassis bearing upon the upper end of said spring, a hydraulic jack having a cylinder disposed coaxially of said spring and secured to said portion, said jack having extensible elements operatively associated with said cylinder

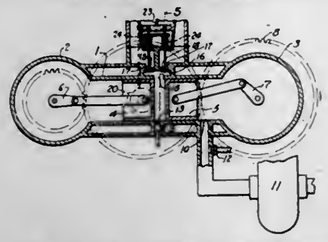
whereby the jack may be collapsed upwardly substantially completely within said spring to maintain normal road clearance.

2,473,758
TIP CLEANER HOLDER
Harry D. Maitlen, Long Beach, Calif., assignor to Maitlen & Benson, Inc., Long Beach, Calif., a corporation of California
Application October 4, 1948, Serial No. 52,657
7 Claims. (Cl. 206—37)



1. A holder for attenuate objects having loops at one of their ends, comprising: a box-like receptacle having a bottom wall, side walls, an end wall having an opening, and an open top; an extensible support spindle disposed between said side walls adjacent said end wall, said spindle being adapted to receive the loops of the objects to permit the same to pivot thereon from a retracted position within said receptacle to an extended position wherein their free ends project outwardly through the opening in said end wall, said side walls of said receptacle being provided with indentations in alignment with said spindle; and a cover member pivoted to said receptacle at the other end thereof to adapt said cover member to be opened to permit pivotal movement of the objects and to be closed to retain the objects in their extended and retracted positions, said cover member being of channel shape and having resilient side flanges adapted to overlie said side walls of said receptacle, said side flanges having detent projections adapted to snap into said indentations when said cover member is pivoted to closed position.

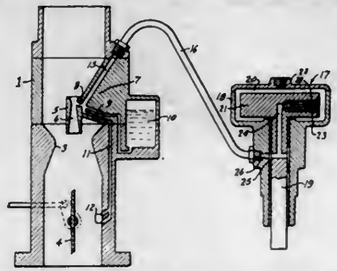
2,473,759
TWO-CYCLE OPPOSED PISTON ENGINE
Marion Mallory, Detroit, Mich., assignor to The Mallory Research Company, Detroit, Mich., a corporation of Michigan
Application August 2, 1946, Serial No. 687,916
8 Claims. (Cl. 123—51)



1. An internal combustion engine having a cylinder in which two opposing pistons operate and between which combustion occurs, said pistons being connected at opposite ends of the cylinder to separate crankshafts geared together with a two-to-one ratio, with the slow moving piston controlling an exhaust port, wherein the fast

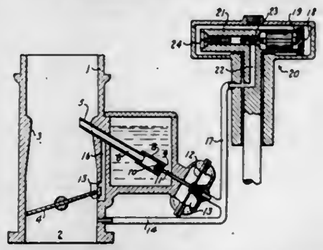
moving piston has a crank lead over the slow piston at the firing position, and the exhaust port

is located so that the slow piston starts to uncover it when approximately midway of its outstroke.



2,473,760
INTERNAL-COMBUSTION ENGINE
Marion Mallory, Detroit, Mich., assignor to The Mallory Research Company, Detroit, Mich., a corporation of Michigan
Application May 7, 1947, Serial No. 746,539
20 Claims. (Cl. 123—51)

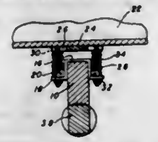
1. In an internal combustion engine having a cylinder in which two opposing pistons operate and between which combustion occurs, said pistons being connected at opposite ends of the cylinder to separate crankshafts geared together with a two-to-one ratio and to start a cycle with the crank of the fast piston in substantially inner dead center position and the other in lagging relation, means for supplying air charges to the cylinder including an intake port controlled by the slow piston and positioned to be uncovered thereby during a predetermined arc of movement across outer dead center of the crank of said piston, said cylinder having an exhaust port adjacent to its center between the pistons, means operable to open the exhaust port during a considerable portion of the outstroke of the slow piston, and means to inject a fuel charge into the cycle before compression of a charge by opposed inward movements of the pistons.



2,473,761
SPEED CONTROL FOR INTERNAL-COMBUSTION ENGINES
Marion Mallory, Detroit, Mich., assignor to The Mallory Research Company, Detroit, Mich., a corporation of Michigan
Application September 25, 1947, Serial No. 776,113
11 Claims. (Cl. 123—106)

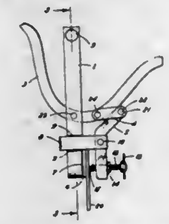
1. The combination with an internal combustion engine comprising a fuel feed passageway to the engine cylinders and a carburetor having a fuel supply source, a main discharge nozzle disposed in said passageway, a channel through which fuel is drawn from the source to the nozzle by suction action therein occasioned by the rush of gases through said passageway, and a throttle in said passageway, of a vent channel leading to said nozzle channel from the atmosphere, and

means normally closing said vent channel and operable to open it and vent the nozzle channel to stop the fuel flow therethrough when the engine reaches a predetermined open throttle speed.



2,473,762
SPEED CONTROL FOR INTERNAL-COMBUSTION ENGINES
Marion Mallory, Detroit, Mich., assignor to The Mallory Research Company, Detroit, Mich., a corporation of Michigan
Application September 25, 1947, Serial No. 776,114
7 Claims. (Cl. 123—106)

1. The combination with an internal combustion engine having a fuel feed passageway to its cylinders, and a carburetor for feeding fuel to said passageway and comprising a fuel supply source, a main nozzle orifice opening into the passageway with a channel communicating with said source and through which fuel is drawn to said orifice by suction action in the passageway, and a throttle at the suction side of said nozzle, of a valve for closing said channel and normally standing in open position, and means operable by suction action in said passageway and by engine speed to close said valve and stop the fuel flow to the nozzle when the engine has reached a predetermined open throttle speed.

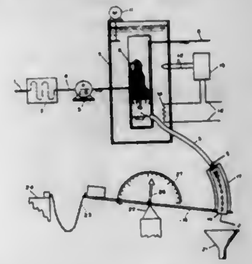


2,473,763
HOLDER ATTACHMENT FOR WAGONS
Donald N. Mathey, Platte, S. Dak.
Application June 4, 1947, Serial No. 752,552
2 Claims. (Cl. 280—143)

1. A shock absorber comprising a bolster member carried by a wagon axle, spring supporting brackets carried by said member intermediate the ends thereof, a bearing plate disposed above said member and beneath a wagon bed, ears projecting outwardly from said plate intermediate the ends thereof, shaft means engaging said ears and depending therefrom, the ends of said

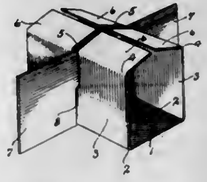
brackets turned outwardly to receive the free ends of said shaft means, and spring means carried by said shaft means and interposed between said ears and said brackets.

2,473,764
CLAMP
Allan J. Park, Lakewood, Ohio
Application April 6, 1945, Serial No. 586,975
4 Claims. (Cl. 24—248)



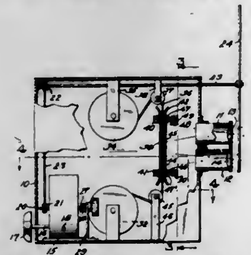
3. A clamp comprising main and movable jaws pivotally connected together between their ends, the portions of said jaws on one side of said pivotal connection being work engaging and parallel portions when in clamping position and the portions on the other side of said connection being diverging portions, a lever pivoted to the divergent portion of said main jaw, a link between the divergent portions of said jaws and pivotally connected to the movable jaw and to the lever, the lever being movable about its pivoted connection to the main jaw to move the clamping portions of said jaws into clamping position by moving the center of the pivotal connection of the link to the lever just beyond a plane joining the centers of the pivotal connections of the lever to the main jaw and the link to the movable jaw and to lock the jaws in clamping position by abutting against the movable jaw.

2,473,765
LIQUID FLOW MEASURING APPARATUS
Vern G. Platts, Phillips, Tex., assignor to Phillips Petroleum Company, a corporation of Delaware
Application November 20, 1944, Serial No. 564,321
3 Claims. (Cl. 73—215)



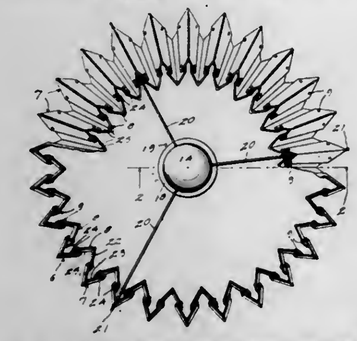
1. A device for continuously measuring the rate of flow of liquids comprising in combination, a stationary frame, a pivoted frame pivoted to said stationary frame, a reservoir mounted on said pivoted frame eccentric to its pivot and positioned to receive said liquids to be measured therein, said reservoir comprising a tank having perforations spaced vertically thereon, means for constantly balancing said reservoir and contents

comprising a flexible member of substantially uniform weight per unit length suspended freely from said stationary and said pivoted frames,



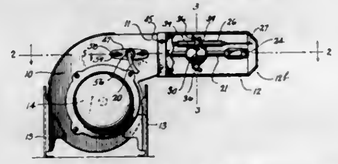
and means connected with said pivoted frame for indicating the weight of said reservoir and contents in terms of rate of flow of said liquid therein.

2,473,766
BOX PARTITION
Ralph C. Richey, Chicago, Ill., assignor to American Box Board Company, Grand Rapids, Mich., a corporation of Michigan
Application July 26, 1948, Serial No. 40,679
5 Claims. (Cl. 229—42)



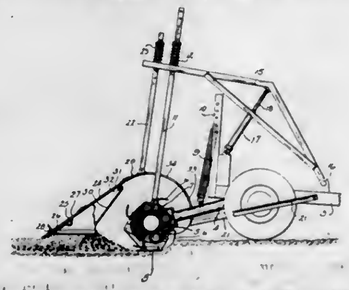
3. A box partition structure comprising, a rectangular sheet of paperboard having a transversely disposed rectangular bottom section between the ends thereof and located symmetrically with respect to said ends, an integral rectangular section extending from each side of said first mentioned rectangular section, there being bending lines between the adjacent edges of said first and second rectangular sections, and additional bending lines parallel to the first lines between said second mentioned rectangular section and the adjacent ends of the material sheet, said material sheet from each end thereof and between its sides having a slot extending from the adjacent end substantially half through the second mentioned rectangular section, whereby said material sheet is foldable into a structure having a horizontal bottom, vertical sides and inwardly extending separated flaps at the upper edges of said sides, and a second member of flat paperboard material of rectangular form having a width substantially equal to the width of the second mentioned rectangular sections of the first described member and twice slotted from one longitudinal edge thereof substantially half the width, said slots being spaced from each other a distance substantially equal to the width of the first mentioned rectangular section of the first described member.

2,473,767
PLUBAL LENS CAMERA
Earl Roberts, Easton, Pa.
Application June 27, 1947, Serial No. 757,405
1 Claim. (Cl. 88—16.6)



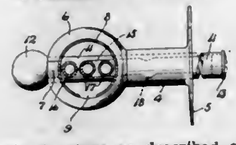
A device of the character described comprising a camera casing, a pair of reels mounted to carry film mounted in the casing, a lens mounted in the front wall of the casing, a second lens mounted in the front wall of the casing above and to one side of the first mentioned lens, a shutter adapted to cooperate with the lens and film to expose the film in pairs of successive frames, an intermittent motor, a disc at one side of one of the reels, said motor being provided with a shaft, a friction roll in driving engagement with the disc and adapted to cause the film to move a distance of two frames at each intermittent movement of the motor, a drive connection between the motor shaft and the drive roll, an elongated shaft extending from within the casing to a point beyond the front wall thereof and carrying said shutter, a drive connection between the motor shaft and the elongated shaft and means for starting and stopping said motor.

2,473,768
LAMP SHADE
Mario Sarra, New Britain, Conn.
Application December 27, 1946, Serial No. 718,777
5 Claims. (Cl. 240—108)



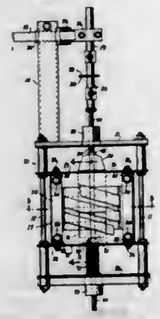
1. In a lamp shade, a plurality of reflector members each of substantially V-shaped cross section, a plurality of connecting elements for connecting said reflecting elements or members in spaced overlapping relationship whereby said reflecting members will be disposed to face alternately in opposite directions, and the adjacent edges of adjacently disposed and correspondingly facing reflecting members being spaced from one another whereby light rays directed toward one side of the shade will enter through certain of said spaces and be reflected a plurality of times from a plurality of surfaces of said reflecting members and projected outwardly through spaces of other of the reflecting members.

2,473,769
SUPPORT MEANS FOR OIL PIPES AND ELECTRODES IN OIL BURNERS
Carl E. Schinman, Seattle, Wash.
Application September 16, 1946, Serial No. 697,218
2 Claims. (Cl. 158—76)



1. In an oil burner having a blast tube, an oil delivery pipe extending centrally within the blast tube and a pair of electrodes parallel with the said pipe; a support for the pipe and electrodes comprising a pair of saucer-shaped disks of the same diameter but of a lesser diameter than the blast tube, faced in opposite directions and secured edge to edge to form a hollow circular body; said disks having central openings loosely receiving the pipe therein, wings extending from the periphery of at least one of said disks and engaging in a supporting contact with walls of the blast tube to center the support in the tube; said disks having paired openings therethrough spaced from the axial line of the body and receiving said electrodes loosely therein for the slidable adjustment of the support longitudinally of the blast tube, and a clamp plate within the support underlying the electrodes and overlying the oil pipe, and a set screw threaded through the plate and engaged against the pipe and adapted to be turned to force the electrodes and pipe against the edges of their respective containing openings to hold the support against movement.

2,473,770
ART OF MIXING
Harry J. Seaman, Milwaukee, Wis.
Application June 24, 1943, Serial No. 492,014
1 Claim. (Cl. 94—44)

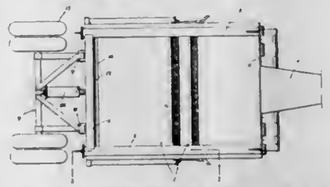


In a device of the character described having a rotary tilling head, means for rotating said head at high speed in a direction to throw tilled material rearwardly and a hood with a rearwardly inclined panel, the combination with said hood and panel, of an inclined foraminous screen mounted within the hood forwardly of the panel and at a steeper angle of inclination than the panel, said screen having openings adapted to pass fine material dislodged by said head and to force coarser material downwardly to be covered by such fine material, and means for releasably securing the panel against change of angular position respecting the hood, said panel having a hinged connection with the hood whereby to be floating when said means is released.

2,473,771
TOWEL RACK
Edward Guy Slater, Muskegon, Mich.
Application June 17, 1946, Serial No. 677,308
8 Claims. (Cl. 211—123)

3. A rack structure as described comprising, two horizontally spaced tubular supporting brackets, a hollow rack bar extending between the brackets, a supplemental rack including two parallel spaced side supporting rods each slidably extending through an opening in each of said brackets and movable inward and outward with respect thereto, and a plurality of rods extending between said side supporting rods and movably mounted thereon, whereby they may be spaced from each other or be brought closely adjacent to each other, said hollow bar having a longitudinal slot therein through which said last mentioned rods may pass to be housed in the hollow rack bar.

2,473,772
ELECTRIC STORED ENERGY RESISTANCE WELDING SYSTEM
Alfred Vang, New York, N. Y.
Application March 2, 1945, Serial No. 580,648
16 Claims. (Cl. 219—4)

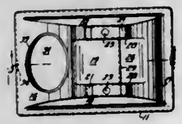


1. A system for resistance welding including a welder having opposed electrodes, a pair of solenoids associated to form a transformer, an armature in one of the solenoids for urging the electrodes together, the secondary of the transformer being adapted to supply a resistance welding current to the electrodes, and the primary being connected to an abruptly interceptible source of current, the only iron in the transformer being the armature.

2,473,773
TOOTHBRUSH
Harry D. West, Bay City, Mich., assignor of one-half to Eleanor Kushmaul, Saginaw, Mich.
Application November 16, 1945, Serial No. 629,151
2 Claims. (Cl. 128—62)

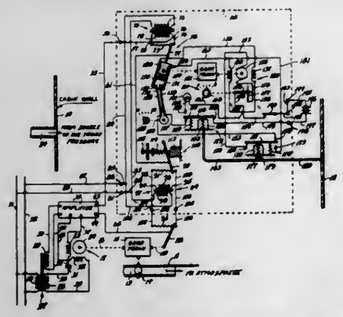
1. In a toothbrush, the combination of a body member including a handle, bristles projecting from said body member, a horizontally disposed, wedge-shaped, smooth, soft rubber massaging element mounted on the body element with the thick end of the wedge-shaped element located adjacent the front end of the bristles, said element being formed with a centrally disposed reduced neck section intermediate the body member and the wedge-shaped section to permit easy, universal movement of the upper wedge-shaped section of the massage element when the brush is in use.

2,473,774
LOAD EJECTING MECHANISM FOR CARRYING SCRAPERS
Paul Zakel, Stockton, Calif.
Original application July 10, 1945, Serial No. 604,211. Divided and this application June 28, 1947, Serial No. 757,878
5 Claims. (Cl. 37—126)



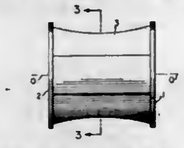
1. In a carrying scraper which includes a bowl having a rear endgate movable therein, and mechanism mounting and power actuating the rear endgate, said mechanism including fluid pressure actuated power cylinders disposed lengthwise of the bowl on opposite sides thereof, said cylinders including jackets and projecting piston rods, means anchoring the piston rods relative to the bowl, means supporting the jackets for lengthwise movement relative to the bowl and in substantially constant parallelism with the longitudinal axis of the bowl, and means suspending the rear endgate from said cylinder jackets.

2,473,775
DECORATIVE COVER FOR TELEPHONE DESK SETS
Calvin H. Allen and Mary E. Allen, Oakland, Calif., assignors to Colorphone, Inc.
Application August 26, 1946, Serial No. 693,123
7 Claims. (Cl. 179—179)



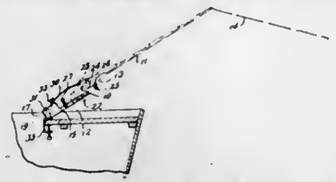
1. A decorative cover for a telephone base unit provided with a dial rotor on one side and a

finger receiving recess on the other side to thereby enable lifting of the unit with fingers comprising a substantially uniformly thin-walled hollow body superimposeable over the housing of said base unit, said body being in substantial conformity with and to snugly receive substantially the entire housing of said base unit, said body having therein recessed protuberances for receiving correspondingly shaped parts of the base unit which provide cradles for receiving and



resting a transmitter-receiver unit which engages switch buttons located between said parts when so resting, and said body having therein apertures registering with and through which said switch buttons may protrude, a further aperture registering with and through which said dial rotor may be exposed, and a still further fingers-enterable aperture registering with said finger recess whereby fingers may be inserted to lift said base unit without dislodgement of the cover superimposed over said base unit.

2,473,776
PRESSURE CONTROL APPARATUS
Albert E. Baak, Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application June 22, 1944, Serial No. 541,583
15 Claims. (Cl. 98—1.5)

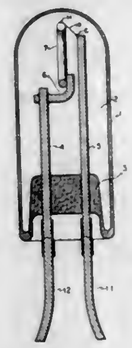


10. Aircraft cabin pressure control apparatus comprising, a valve for controlling air flow through said cabin, motor means for operating said valve, a manually operable selector means including part of a chaser switch means, motor operated switch means for completing said chaser switch means and including a reversible motor means, electrical impedance means arranged to be adjusted by said reversible motor means, means connecting said impedance means in controlling relation to said first named motor means, differential pressure responsive switch means, and means connecting said differential pressure responsive switch means and said selector switch means in controlling relation to the second named motor means so that said impedance means may be adjusted in a direction and to an extent determined by said chaser switch means and may be adjusted only when permitted by said differential pressure responsive switch means.

2,473,777
VARIABLE CAVITY RESONATOR
John T. Beechlyn, Worcester, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application May 17, 1945, Serial No. 594,211
3 Claims. (Cl. 178—44)

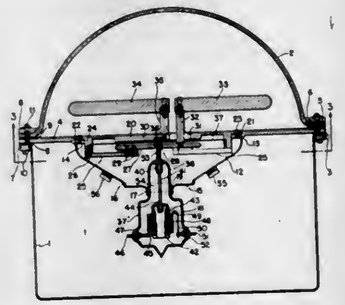
1. A resonator comprising a flexible outer conductor and a flexible inner conductor about a central axis having common end walls substantially parallel to one another, said conductors being formed by a plurality of flexible sections with the ends attached to said end walls, said sections forming a regular polygonal figure symmetrical with said axis.

2,473,778
FISHING ROD HOLDER
Edwin J. Benes, Newburgh Heights, Ohio
Application August 28, 1946, Serial No. 693,540
5 Claims. (Cl. 43—4)



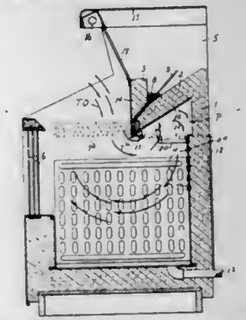
1. In fishing apparatus the combination of, a fishing rod, a rod holder adapted to receive and hold said rod, resilient holding means mounted on said holder adapted to embrace said rod in said holder in opposition to longitudinal pulling forces tending to release said rod from said holder, a brake member mounted on said holder and extending toward the forward end of the handle where it is adapted to rest on a line carried on a reel mounted on said handle for preventing the line from unwinding in response to movement of said rod along a body of water, and adjustable stop means adapted to regulate the longitudinal position of the rod on said holder for positioning a reel in relation to said braking member in such manner that the outer end of said member rests on the reel line, for the purposes described.

2,473,779
PICKUP LOOP WITH THERMOCOUPLE
Hugo Benioff, Pasadena, Calif., assignor, by mesne assignments, to Snbmarine Signal Company, Boston, Mass., a corporation of Delaware
Application March 10, 1945, Serial No. 581,990
2 Claims. (Cl. 136—4)



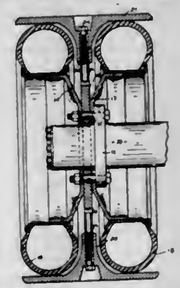
1. A device for measuring the intensity of electromagnetic wave energy of high frequency com-

prising: an evacuated vessel; two conductive supports extending through and into the vessel; a conductive ring having an open segment, the ring being supported at a point opposite said open segment by one of said supports; a thermocouple having the first of its dissimilar wires connected



in the ring across the open segment and the second of its wires connected at one end to said first wire intermediate the ends thereof and at the other end to the end of the other of said supports, said other support terminating very close to said open segment, whereby the thermocouple wires are maintained very short.

2,473,780
SPARK TRANSMITTER
Hugo Benioff, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application October 5, 1945, Serial No. 620,562
11 Claims. (Cl. 250—17)



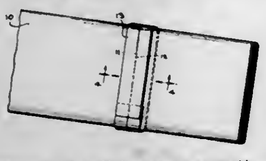
1. An ultra high frequency spark transmitter comprising a doublet antenna, a pair of opposed capacitive plates having central electrodes, means supporting the arms of the doublet from said opposed capacitive plates, a vacuum-enclosed impulse transformer having primary and secondary windings and means directly connecting the terminal of one end of the secondary to one of said electrodes.

2,473,781
MEANS TO ELIMINATE DRIPPAGE OF CONDENSATION IN OPEN-VIEW FROZEN FOOD CASES
Julius A. Brinkoeter, San Antonio, Tex., assignor to Ed Friedrich, Inc., San Antonio, Tex., a corporation of Texas
Application October 28, 1947, Serial No. 782,514
4 Claims. (Cl. 62—89.5)

1. In an open top frozen food refrigerator case having a back wall, side walls and a front window with a top rail and having warming coils around two sides and the back of the top opening of the refrigerator: the invention which comprises a semi-ceiling extending upwardly-rearwardly from the back of the top opening of the refrigerator and cooperating with the back wall of the case to provide a recess, and a condensate drain gutter along the lower edge of said semi-ceiling, and a drain pipe leading from said gutter to the outside of the case.

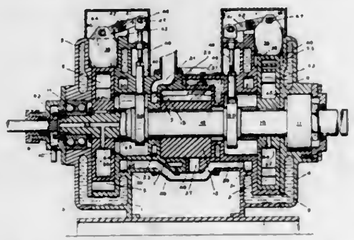
2,473,782
TRACTION DEVICE
Clarence W. Boone, Syracuse, N. Y.
Application September 24, 1946, Serial No. 699,027
3 Claims. (Cl. 152—220)

1. A traction device for vehicle wheels comprising a disk member secured to and rotatable with the wheel and having a plurality of circumferentially spaced apart radially extending projections non-circular in cross section, a traction shoe carried by each of said projections, each of said traction shoes having a stem portion formed with a recess complemental to said projections and slidably mounted thereon, said stem portions having laterally extending ground en-



gaging portions extending over the periphery of the wheel, and means carried by each of said projections and cooperable with said traction shoes to limit the outward movement thereof.

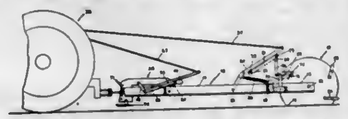
2,473,783
PORTABLE HEATER
John W. Brown, Jr., Lakewood, Ohio, assignor to Brown Fintube Company, Elyria, Ohio, a corporation of Ohio
Application October 12, 1946, Serial No. 703,019
3 Claims. (Cl. 219—38)



3. An electric heater comprising a deflector plate that is generally convex upwardly across its width and straight along its length, a channel along each long edge of said plate formed by turning the material at the long edges under the convex portion of said plate, a case adapted to extend above and across said plate and provided at two parallel edges with beads adapted to enter said channels, the distance between said beads when the case is removed being less than the distance between said channels to provide a snap fit between said beads and channels, an elongated heating element mounted on said plate lengthwise thereof and on the convex side substantially midway between said channels, a metal tube encasing said element and electrically insulated therefrom, a plurality of heat dissipating fins secured to the exterior of said tube and lying in planes transverse to the long axis of said tube, said case being provided with a plurality of openings to permit free flow of air therethrough and end covers overlying the open ends of said case.

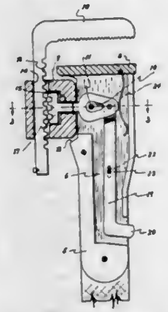
2,473,784
INNER TUBE AND METHOD OF MAKING THE SAME
James C. Carlin and Robert R. Lloyd, Norristown, Pa., assignors to Lee Rubber & Tire Corporation, Conshohocken, Pa., a corporation of New York
Application November 9, 1944, Serial No. 562,730
1 Claim. (Cl. 154—14)

In a method of splicing a pneumatic rubber tube which consists in complementally severing the opposite ends thereof while in an uncured state to provide the same with freshly exposed surfaces, in joining together the severed ends of the tube with the exposed surfaces thereof in contacting relation, in applying about a substantial extent of the tube joint a circumferentially extending fabric tape having its inner surface treated with a material which is non-vulcanizably adherent to the rubber stock of the tube, said tape being bias cut to provide it with a capacity for lengthwise stretch, in inflating the tube preliminarily to curing of the same in a curing mold, and in then curing the inflated tube, said tape being so contracted in width upon the inflation of the tube and the corresponding lengthwise stretch of the tape as to draw the tape-covered portions of the tube stock together with a resulting increase in thickness of said portions.



2,473,785
ROTARY COMBUSTION MOTOR
William A. Cate, Portland, Oreg., assignor of forty-nine per cent to Edward C. Cate, Portland, Oreg.
Application March 15, 1945, Serial No. 582,937
2 Claims. (Cl. 123—14)

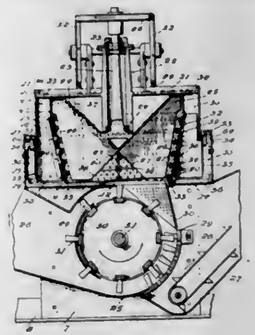
1. A rotary internal combustion engine comprising in combination, a casing, two power cylinders and a compression cylinder axially aligned in said casing, said compression cylinder being between said power cylinder and having an outlet peripherally thereof and externally of said casing, a shaft mounted in said casing axially of said cylinders, rotors mounted in each of said cylinders and secured to said shaft, abutment members movably mounted in each of said cylinders to cooperate with the respective rotors mounted therein, ignition means in said power cylinders for firing fuel therein to drive the respective rotors therein, a fuel manifold encircling said shaft within said casing laterally adjacent said compression cylinder and having communication therewith through a common wall, supply manifolds in said casing respectively between said power cylinders and said compression cylinder, said supply manifolds respectively having communication with said power cylinders and having inlets opening externally of said casing on either side of said compression outlet, and a compression manifold in the form of a hood mounted on said casing and connecting said compression cylinder outlet and said supply manifold inlets.



2,473,786
ROTARY EARTH SCRAPER
Edgar V. Collins, Ames, Iowa
Application December 22, 1945, Serial No. 638,695
5 Claims. (Cl. 37—140)

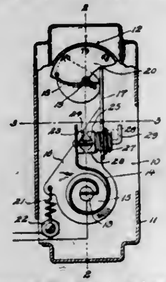
1. In a rotary scraper machine having a main frame including a tongue, and a bucket rotatably carried adjacent the rear end of the frame, a hitch member having a forward portion adapted for connection with a tractor unit, and a rear portion extended in a spaced relation longitudinally of the tongue, means movably supporting said hitch member on said tongue including an upwardly and forwardly inclined first link, and an upwardly and rearwardly inclined second link, means pivotally connecting said first and second links with said tongue and with the rear portion of said hitch member, a pair of toggle links pivotally connected together at one of their ends, with the opposite end of one of said toggle links being

pivoted on the pivot for the lower end of said first link, and the opposite end of the other one of said toggle links being pivoted on the pivot for the upper end of said second link, said toggle links, at one moved position of said first and second links being in substantial longitudinal alignment to releasably lock said first and second links in said one moved position, and manually actuated means for moving said toggle links out of longitudinal alignment to release said first and second links for movement to a second position.



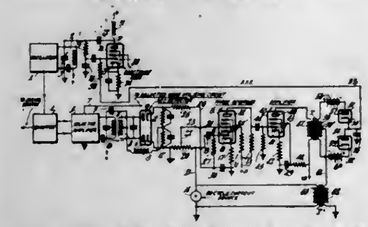
2,473,787
JAW ADJUSTING DEVICE FOR PIPE WRENCHES
Raymond Alexander Conn, Springfield, Nova Scotia, Canada
Application July 5, 1947, Serial No. 759,186
2 Claims. (Cl. 81—102)

1. A pipe wrench comprising a handle, a fixed jaw on an end thereof, a guide yoke hingedly connected by a transverse pivot to said handle near the fixed jaw end thereof, a movable jaw slidable in said guide yoke, a spring-urged bolt engageable with said jaw, slidably supported in said guide yoke and extending into said handle, said bolt being slotted to encompass the guide yoke pivot permitting it to both slide and hinge with its supporting guide yoke, a lever housed in said handle and longitudinally slotted approximately midway of its length and having its upper end pivotally attached to the inner end of said bolt and its lower end protruding from said handle, and a transversely disposed pivot pin extending through the slot in said lever on which said lever may both slide and teeter.



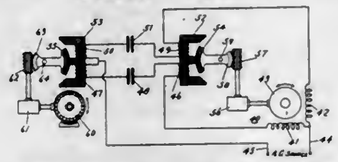
623 O. G.—54

2,473,788
GRAIN THRESHING AND SEPARATING MACHINE
Rollie Crain, Marion, Ill.
Application May 3, 1946, Serial No. 667,028
8 Claims. (Cl. 130—27)



1. A grain thresher and separator comprising a cylindrical casing having its axis disposed vertically, said casing having a cylindrical side wall, a top, and a bottom, said casing bottom having a straw-inlet-opening spaced inwardly from said casing side wall and also having a grain-outlet-opening between said casing side wall and said straw-inlet-opening; an inner continuous wall surrounding said straw-inlet-opening of said bottom and having a portion of its circumference disposed between this straw-inlet-opening and said grain-outlet-opening of said bottom, said inner wall being spaced inwardly from said casing side wall and extending entirely from said casing bottom to said casing top, thereby providing a grain-receiving chamber between said inner wall and said casing side wall and extending entirely from said casing bottom to said casing top, said inner wall having grain-discharge perforations from its interior to said grain-receiving chamber, said inner wall also having a tangential straw-outlet located at its upper end and extending across said grain-receiving chamber and through said casing side wall; grain-threshing means under said bottom and effective to discharge straw upwardly through said straw-inlet-opening of said bottom into the space within the confines of said inner wall; a rotary straw-whirler-and-blower mounted on a vertical axis in said space within the confines of said inner wall and alone serving to discharge all straw through said tangential straw-outlet of said inner wall, said straw-whirler-and-blower having radial blades in close proximity with said inner wall and extending substantially from said casing bottom to said casing top; a rotary scraper between said inner and outer walls and operable over the portion of said casing bottom forming the bottom of said grain-receiving chamber for scraping the grain discharged into this chamber to said grain-outlet-opening of said casing bottom; and means for driving said straw-whirler-and-blower and said scraper.

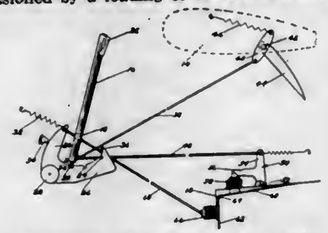
2,473,789
THERMOSTATICALLY OPERATED SWITCH
George W. Crise, Columbus, Ohio, assignor to Crise Electric Manufacturing Company, Columbus, Ohio, a corporation of Ohio
Application March 25, 1946, Serial No. 656,795
5 Claims. (Cl. 200—138)



1. In a thermostatic switch, a base, a bimetallic element mounted at one end on said base, said element having a free end deflectable in response to temperature variations, a contact carried by the free end of said element, a permanent magnet having spaced poles mounted on the free end of said element adjacent to said contact, an adjustable supporting member arranged on said base, a threaded device rotatably adjustable on said supporting member, a contact on one end of said device arranged for intermittent engagement with said element contact, and a second permanent magnet having spaced poles mounted on and bodily movable with said threaded device and disposed in registration with said first-named magnet, the rotational adjustment of said device causing variation in the strength of the magnetic field provided between said magnets and control of the spacing between said contacts.

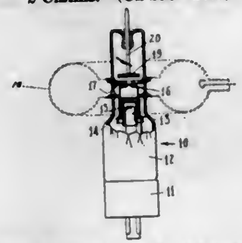
2,473,790
AUTOMATIC FREQUENCY CONTROL CIRCUITS
Murray G. Crosby, Upper Montclair, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 8, 1946, Serial No. 652,912
4 Claims. (Cl. 250—36)

1. In combination with a high frequency oscillator having means for adjusting the frequency thereof, an electronic reactance tube including connections to the oscillator for providing control over the oscillator frequency, a source of alternating voltage, a pair of rectifiers connected in series-aiding relation, means for individually biasing the rectifiers to cut-off, means for applying alternating voltage from said source to both of said rectifiers, a discriminator rectifier network having an input circuit responsive to oscillator frequency shifts, said network including an output circuit constructed and arranged to develop a direct voltage representative of said frequency shifts, an electron control device having at least two spaced control electrodes, means for applying alternating voltage from said source to said spaced electrodes in such relative magnitude that output voltage derived therefrom is normally zero, means for applying said direct voltage to at least one of the spaced control electrodes, means for applying to said rectifiers output voltage derived from the control effect of said spaced control electrodes, and additional means responsive to the joint output of said rectifiers for controlling the effect of said reactance tube.



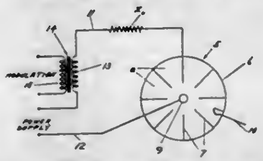
2,473,791
INDUCTION MOTOR SERVO SYSTEM
John A. Doremus, Chicago, Ill., assignor, by mesne assignments, to Raytheon Air Beam, Inc., Newton, Mass., a corporation of Delaware
Application January 31, 1947, Serial No. 725,686
3 Claims. (Cl. 318—28)

1. A servo system comprising an adjustable position first element, a driven adjustable position second element, a split phase induction motor for driving said second element, a source of alternating current for energizing said motor, a first adjustable phase-shifting network connected in series with one winding of said motor and said source, and a second adjustable phase-shifting network connected in series with the other winding of said motor and said source, each of said first and second networks having two variable reactors connected in series with a reactor of opposite sense, one variable reactor of each network comprising a winding mounted on a core which is common to both networks, the inductances of said windings being oppositely varied in accordance with the position of said first element, the other variable reactor of each network being varied in accordance with the position of said second element to thereby adjust the phase shift of each network to be equal to each other after each change in position of said first element.



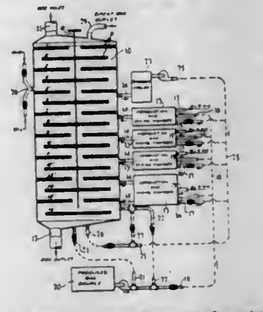
2,473,792
AUTOMATIC FLAP RETRACTOR
Athanas P. Fontaine, Detroit, Mich., assignor to Bendix Aviation Corporation, Detroit, Mich., a corporation of Delaware
Application September 17, 1945, Serial No. 616,893
1 Claim. (Cl. 244—42)

In a control system for an aircraft having wing flaps and a shock strut, a fixed support, a lever pivoted on the fixed support having a pawl at one end thereof, a rack pivoted on the fixed support having spaced slots adapted to receive the pawl, a crank on the flap, resilient means associated therewith urging the flap to a retracted position, a trigger adapted to be actuated by loading the shock strut, a first cable connecting the crank to the lever, a second cable connecting the rack to the trigger, a third cable connecting the lever to the trigger, means associated with the rack to yieldingly oppose any rotation thereof occasioned by a loading of the shock strut, and



means yieldingly urging the trigger away from the shock strut.

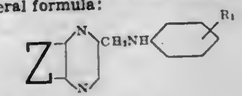
2,473,793
GRID STRUCTURE
Bernard C. Gardner, Waltham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application October 26, 1945, Serial No. 624,844
2 Claims. (Cl. 250—27.5)



2. A grid structure for an electron-discharge device comprising: a tubular member having integrally formed, at one end thereof, a plurality of inwardly-directed, radially-disposed, wedge-shaped fingers, and at the other end thereof, an annular flange for connecting the same to an external circuit; said fingers lying in planes parallel to the axis of said tubular member.

2,473,794
MODULATION SYSTEM
William M. Hall, Lexington, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 22, 1945, Serial No. 600,861
2 Claims. (Cl. 332—5)

1. In combination: a magnetron oscillator; a source of modulating voltage therefor; and means for rendering the output voltage of said oscillator substantially linearly variable with said modulating voltage; said means comprising an impedance connected in series intermediate said oscillator and said source of modulating voltage; said impedance being of such value that the ratio of the voltage on said oscillator to said modulating voltage is approximately the reciprocal of the ratio of the oscillator output voltage to said modulating voltage in the absence of said impedance.

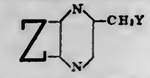


2,473,795
REDUCTION OF ORES CONTAINING NICKEL
Robert C. Hills and Maurice F. Dufour, Nicaro Cuba, assignors to Nicaro Nickel Company, New York, N. Y., a corporation of Delaware
Application May 10, 1944, Serial No. 534,878
7 Claims. (Cl. 75—82)

1. In the selective reduction of the nickel content of oxide ores containing iron and nickel by means of heating gases and reducing gases contacted with the ore during its passage through a furnace, the process of controlling the temperature and reduction characteristics of the gaseous atmosphere in the furnace which comprises, introducing in regulated amounts at regulated temperatures hot flue gases in admixture with partially spent reducing gases theretofore withdrawn from said furnace, into the reducing gas atmosphere in contact with the ore at one or more points between the ore inlet and the ore outlet of the furnace, thereby altering both the temperature and the $CO:CO_2$ ratio in the gas atmosphere and accomplishing desired control.

2,473,796
PREPARATION OF HETEROCYCLIC COMPOUNDS
Martin E. Hultquist, Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 2, 1946, Serial No. 645,250
8 Claims. (Cl. 260—250)

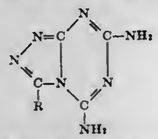
1. A method of preparing compounds having the general formula:



in which

is a fused pyrimido pyrazyl radical and R_1 is a non-functional radical which comprises mixing

together and heating to a temperature of at least about 100° C. a compound having the formula:

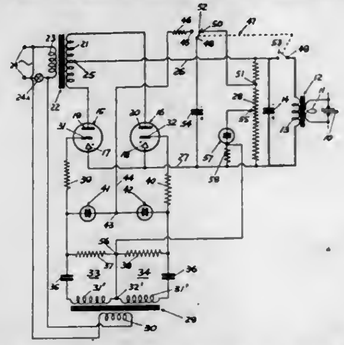


in which Y is a radical of the group consisting of those of tertiary amines and quaternary ammonium compounds, and a compound having the formula:

and recovering the said product.

2,473,797
TRIAZOLYLENE TRIAZINES AND PREPARATION THEREOF
Donald W. Kaiser, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application November 13, 1944, Serial No. 563,313
12 Claims. (Cl. 260—249.5)

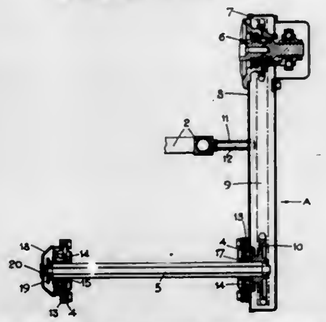
7. Compounds having the following general formula



in which R is a radical of the group consisting of aliphatic and aromatic radicals.

2,473,798
NONIONIC SURFACE ACTIVE AGENT
Roy H. Kienle, Bound Brook, and Gordon P. Whitcomb, Watchung, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 10, 1946, Serial No. 682,584
11 Claims. (Cl. 260—29)

1. A stable emulsion of water and synthetic resin which includes, as a non-ionic emulsifying agent, an ester of a dicarboxylic acid of the alicyclic series obtained by the heat dimerization of poly-unsaturated long chain fatty acids with a polymerization product of an alkylene oxide of 2 to 3 carbon atoms having a molecular weight of from 300 to 6000.



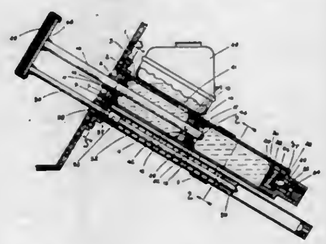
2,473,799
CONDENSER WELDING SYSTEM
Hans Klemperer, Belmont, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application January 16, 1947, Serial No. 722,353
4 Claims. (Cl. 219—4)

1. An electrical system comprising: a plurality of capacitors; means for charging said capacitors, said means including a source of alternating voltage and a plurality of grid-controlled gaseous discharge devices for rectifying the same; a load circuit; means for discharging a first of said capacitors through said load circuit; means, operable simultaneously with said discharging means, for discharging a second of said capacitors; and means, including in part said last-named means, for connecting said second capacitor to the grids of said devices during discharge of such capacitor, whereby the voltage across

said second capacitor is applied to said grids during the discharge thereof, and thereby the discharge devices are rendered non-conducting.

2,473,800
MOUNTING AND DRIVING THE LAND ROTOR OF AGRICULTURAL OR LIKE VEHICLES
George Hugh Foley Knight, Basingstoke, England
Application October 21, 1947, Serial No. 781,224
In Great Britain July 28, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires July 28, 1964
6 Claims. (Cl. 180—19)

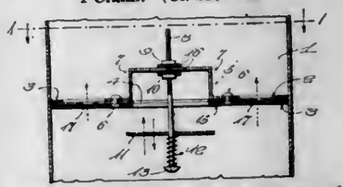
1. Mounting and driving means for interchangeable rotors of an agricultural, horticultural or like implement having a chassis comprising in combination, bearing housings attached one to each of two carrier frames disposed at the sides of the chassis of the implement, a radial ball or roller bearing mounted in each of said housings, a first bearing sleeve fixedly supported in the inner race of one bearing, a chain sprocket wheel connected with a power unit on the implement chassis and having a sleeve-like hub fixedly supported in the inner race of the other bearing and constituting a second bearing sleeve aligned with the first, and a rotor supporting and driving axle non-rotatably mounted in the said bearing sleeves so as to be driven by the second bearing sleeve, the bearing housing of said first bearing sleeve being fitted with detachable means normally preventing endwise movement of the axle, but facilitating said movement when detached to enable the axle to be withdrawn for replacing the rotor by another.



2,473,801
EMULSIONS OF POLYMERIZABLE COMPOSITIONS
Edward L. Kropa, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application April 1, 1939, Serial No. 265,543
2 Claims. (Cl. 260—29.2)

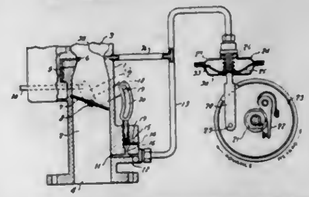
1. An aqueous emulsion containing a homogeneous mixture including a polymerizably reactive monomeric polyallyl ester of a polybasic acid having no conjugated carbon-to-carbon double bonds, and a maleic polyester of hexaethylene glycol.

2,473,802
PREPARATION OF 2,4,5-TRIAMINO-6-HYDROXYPYRIMIDINE
Erwin Kuh, New Brunswick, and Hugh S. Barnaby, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 20, 1946, Serial No. 698,396
6 Claims. (Cl. 260—251)



1. A method which comprises subjecting 2,4-diamino-5-nitroso-6-hydroxypyrimidine to the action of the zinc dust and ammonium hydroxide whereby the nitroso radical is reduced to an amino radical and thereafter acidifying the reduction liquor to precipitate an acid salt of 2,4,5-triamino-6-hydroxypyrimidine and recovering said acid salt.

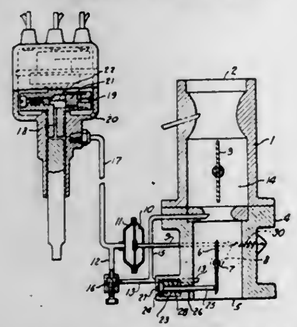
2,473,803
MASTER CYLINDER
Ludger E. La Brie, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a corporation of California
Application June 1, 1945, Serial No. 597,102
3 Claims. (Cl. 60—54.6)



1. In a master pressure device for hydraulic brakes, a pair of parallel plungers, a reservoir into which one of said plungers extends a pressure chamber into which the first plunger extends for creating fluid pressure upon the inward movement of said plunger, a spring housing into which the other of said plungers extends, a packing about the first plunger to retard the escape of fluid from the reservoir along the plunger, a guide member having openings therein, one for each plunger, and having a cross-opening from outside the packing member for one plunger to the guide for the other plunger to lubricate the latter plunger by brake fluid which passes the packing member.

2,473,804
DRAFT CONTROL FOR OIL BURNERS
Arthur T. Ledoux, Littleton, N. H.
Application June 5, 1947, Serial No. 752,719
1 Claim. (Cl. 236—45)

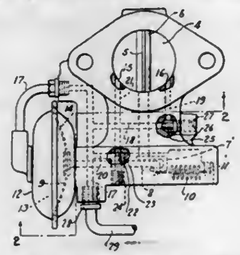
An automatic draft control for burners having a vertical flue section, including a support disk positioned within said flue section, said disk having an aperture therein for the passage of flue gases, means frictionally maintaining said disk in a horizontal position within said flue section, a saddle carried by said disk and having a portion extending over and spaced from said aperture, a rod carried by said saddle and extending downwardly through said aperture, a valve member mounted on said rod below said aperture for free vertical movement toward said aperture on increase in burner draft, and a spring carried by said rod below said valve member to limit downward movement of said valve member on decrease in burner draft.



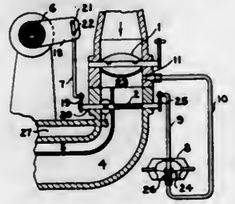
2,473,805
IGNITION TIMING CONTROL MEANS FOR INTERNAL-COMBUSTION ENGINES
Marion Mallory, Detroit, Mich.
Application August 31, 1948, Serial No. 47,008
6 Claims. (Cl. 123—117)

1. In an internal combustion engine having an intake passageway, a throttle valve in the intake passageway controlling the flow of motive fluid therethrough, an ignition timer, a suction device for actuating said ignition timer to advance and retard the spark, an orifice located in said intake passageway always on the engine side of said throttle valve, a conduit connecting said orifice with the suction chamber of said suction device, said suction device being constructed and arranged so that upon a fall of pressure in the suction chamber the suction device tends to advance the spark and upon a rise in pressure in the suction chamber the suction device tends to retard the spark, an air bleed orifice communicating with said suction chamber, a valve controlling said air bleed orifice, and means for actuating said valve to open said air bleed orifice when the throttle valve is in idle position where-

by the pressure in said suction chamber is bled down and the spark is substantially fully retarded.



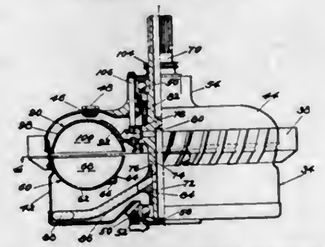
2,473,806
ENGINE GOVERNOR
Marion Mallory, Detroit, Mich.
Application January 10, 1944, Serial No. 517,623
3 Claims. (Cl. 123—103)



1. A device for controlling the speed of an internal combustion engine having an intake passageway comprising a governor valve in said passageway, means actuated by changes of pressure in the intake passageway on the engine side of said governor valve and having an operative connection with said governor valve for controlling the flow of motive fluid through said intake passageway, speed controlled air bleed means for bleeding air into said pressure actuated means below the governed speed of the engine and tending to close as the engine reaches its governed speed whereby the pressure actuated means tends to move said governor valve toward closed position, a throttle valve on the atmosphere side of said governor valve, resilient means tending to open said governor valve, said resilient means moving said governor valve toward open position when the air bleed to said pressure actuated device is opened, a dash pot for controlling the rate of opening of said governor valve, and a servo motor responsive to the intake passageway suction when the throttle valve is at idle and thereby tending to close said governor valve.

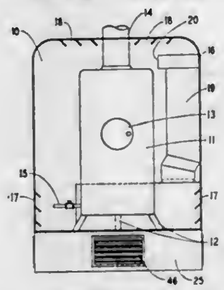
2,473,807
ENGINE GOVERNOR
Marion Mallory, Detroit, Mich.
Application June 9, 1945, Serial No. 598,562
4 Claims. (Cl. 123—103)

1. A governor for an internal combustion engine having an intake passageway, a throttle valve in said passageway for controlling the flow of motive fluid to said engine, a pressure actuated device responsive to changes in pressure in the intake passageway, a connection between said pressure actuated device and said throttle valve whereby as the pressure falls in said pressure actuated device the device tends to move said throttle valve toward closed position, first and second orifices in the intake passageway on the engine side of said throttle valve when in nearly closed position, said orifices communicating with said pressure actuated device, the second of said orifices being positioned adjacent the throttle valve whereby as the throttle valve opens, the second orifice passes on to the atmosphere side of said throttle valve and tends to serve as an air bleed orifice to said pressure actuated device, resilient means tending to open said throttle valve, a third orifice constituting an air bleed for said pressure actuated device, a valve centrifugally controlled in accordance with engine speed for controlling said third air bleed orifice, said centrifugal valve tending to close said third orifice at a predetermined engine speed whereby said pressure actuated device responds to intake passageway pressure and moves said governor valve toward closed position.



2,473,808
FUEL TEMPERATURE CONTROL FOR INTERNAL-COMBUSTION ENGINES
Marion Mallory, Detroit, Mich.
Application January 10, 1946, Serial No. 640,222
4 Claims. (Cl. 123—122)

1. In an internal combustion engine having an intake passageway for supplying motive fluid to said engine, a throttle valve controlling the flow of motive fluid therethrough, heating means, a second passageway for supplying motive fluid to the engine in heat exchange relation with said heating means and communicating with the first intake passageway on the engine side of said throttle valve, valve means independent of said throttle valve for controlling the flow of motive fluid through said intake passageways on the engine side of the throttle valve, said valve means being constructed and arranged to decrease the flow of motive fluid through the first mentioned intake passageway as it increases the flow through the heated passageway, a thermostat in heat exchange relation with said engine and having a lost motion connection with said valve means whereby said thermostat when the engine is cold controls said valve means to increase the flow of motive fluid through said second passageway and when the engine is hot the thermostat owing to its lost motion connection is ineffective to actuate said valve, and a fluid pressure motor actuated in response to changes of pressure in the intake passageway on the engine side of said throttle valve and between said throttle valve and

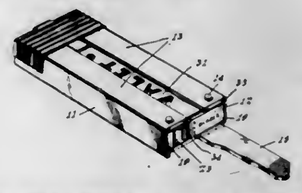


said valve means whereby said pressure actuated means when the engine is hot responds to a rise in intake passageway pressure to increase the flow of motive fluid through the first intake passageway and decrease the flow through the heated passageway and responds to a fall in intake passageway pressure to increase the flow of motive fluid through the heated passageway and decrease the flow through the other passageway.

2,473,809
FLUID COUPLING
Raymond J. Miller, Detroit, Mich., assignor to Bendix Aviation Corporation, Detroit, Mich., a corporation of Delaware
Application July 31, 1943, Serial No. 496,934
5 Claims. (Cl. 60—54)

1. A fluid coupling comprising a rotatable housing having a fluid reservoir therein, a shaft rotatable in the housing having a passage therethrough, scoops in the reservoir carried by the shaft and in communication with the passage, an impeller carried by the housing, a runner carried by the shaft for cooperation with the impeller and providing in conjunction therewith a fluid working circuit and valve means on the shaft for control of communication between the passage and the working circuit.

2,473,810
HEATER
John W. Miller, Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application February 1, 1944, Serial No. 520,620
2 Claims. (Cl. 98—33)



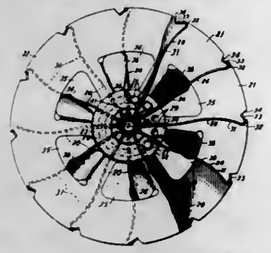
1. A device of the character described comprising a plurality of upright walls forming an enclosure, a heater casing supported upon said walls, an upright partition in said enclosure dividing the same into an air intake chamber and an air distributing chamber and having an opening forming a passageway between said chambers, a generally horizontal wall supported by said upright walls between said enclosure and said heater casing, said horizontal wall having an air inlet opening forming a passageway between said heater casing and said intake chamber, said intake chamber having an air inlet opening in an upright wall thereof communicating with the atmosphere exteriorly of said enclosure and casing, means for selectively closing one or the other of said inlet openings, said distributing chamber having an outlet opening in the upright wall thereof, and a fan located in said passageway between said air intake chamber and said air distributing chamber and for withdrawing air from the intake chamber and discharging it into the distributing chamber.

2,473,811
DESOXY ISO-XANTHOPTERINS AND PROCESS OF MAKING SAME
John H. Mowat and James H. Boothe, Pearl River, N. Y., assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 26, 1945, Serial No. 579,882
8 Claims. (Cl. 260—251)

1. New compounds of the group consisting of 9-desoxy iso-xanthopterin carboxylic acid and its alkali metal salts.

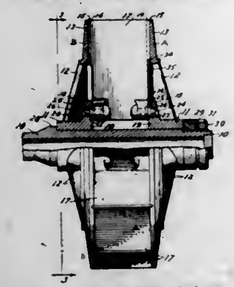
5. A method of preparing 9-desoxy iso-xanthopterin carboxylic acid which comprises heating iso-xanthopterin carboxylic acid with a chlorinating agent to obtain 9-chloro iso-xanthopterin carboxylic acid and reducing said chloro compound to obtain 9-desoxy iso-xanthopterin carboxylic acid.

2,473,812
BLADE MAGAZINE
Joseph Muros, Cambridge, Mass., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application January 23, 1945, Serial No. 574,076
4 Claims. (Cl. 206—16)



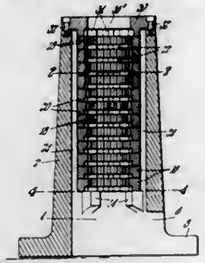
1. A blade magazine comprising an outer open end casing and an inner blade-carrying unit having a side wall terminating at its ends in reentrant flanges, a stack of single-edged blades having unsharpened ends and backs and being retained with their backs against said side wall, and an end wall in said unit separated by a space from one of said reentrant flanges, thereby providing a sight window exposing to view an unsharpened area of the blade stack.

2. A blade magazine comprising a casing having a pair of spaced flanges forming its top, means for supporting a stack of blades within the casing, and an integral feed slide of spring sheet metal having an outer finger piece merging



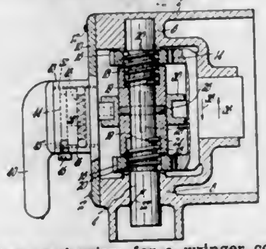
at its rear edge into a U-shaped connecting neck which is bent flatwise of the metal, and an inner plate merging at its rear edge into said neck and held yieldingly thereby against the underface of the flanges.

2,473,813
HIGH-TEMPERATURE FAN
Carl Nygren, Michigan City, Ind., assignor to Michiana Products Corporation, a corporation of Indiana
Application March 15, 1946, Serial No. 654,714
4 Claims. (Cl. 230—128)



1. In a centrifugal fan, a plurality of blade elements each having a blade member provided at its inner end with a return bent portion radially shorter than the blade member and forming therewith an open channel of substantially sector shape, each return bent portion being engaged with the blade member of an adjacent blade element whereby the plurality of blade elements are assembled in circular series about a common axis of rotation, a pair of side plates, one at each side of the assembled blade elements, connected with the blade members adjacent to the outer edges thereof, hub members interposed between the ends of said channels and the inner portions of said side plates, a retaining bar positioned in each channel, and means securing said retaining bars and said inner portions of the side plates to said hub members.

2,473,814
HIGH-TEMPERATURE FAN
Carl Nygren, Michigan City, Ind., assignor to Michiana Products Corporation, a corporation of Indiana
Application April 24, 1947, Serial No. 743,515
4 Claims. (Cl. 230—134)



4. In a centrifugal fan, a shaft, a pair of side pieces spaced apart lengthwise on the shaft, at least one of said side pieces having a hub portion and a shroud integrally connected by radiating spokes, thereby providing inlet openings in the spaces between the spokes, a plurality of blades in circular arrangement about the axis of the shaft with their outer portions diverging outwardly and the edges at one side of each outer portion interlocked with the shroud for normal rotation but capable of freedom of expansion and contraction and with their inner portions converging inwardly, and means in circular series about the shaft making the inner portions of the blades fast to the hub portion of the named side piece to hold the blades against individual bodily movement outwardly due to centrifugal force.

2,473,815
TOOL APPARATUS
John Oakley, Springfield, Mass., assignor to Perkins Machine and Gear Company, West Springfield, Mass., a corporation of Massachusetts
Application December 13, 1945, Serial No. 634,737
2 Claims. (Cl. 29—95.1)

1. A broaching apparatus of the class described comprising in combination, a self supporting unitary holder having a longitudinal bore therethrough, supporting means in the lower end of said bore including a plurality of circumferentially spaced abutments extending inwardly from the bore, said bore of the holder provided longitudinally thereof and above said supporting means with circumferentially spaced inwardly extending projections the innermost sides of which are formed to cooperate and provide a circular axial guideway for cutter members and are arranged to space the sides of cutter members from the sides of said bore, a plurality of cutter members in stacked relation in said bore supported by said supporting means and held in axial alignment in said guideway by said projections whereby the sides of the cutters are spaced from the sides of the bore, a cap member secured to the upper end of the holder bearing on the uppermost cutter member and provided with an opening for the passage of a blank to said cutter members, said cutter members provided with means holding them against relative rotation in the guideway and having central axial and aligned openings therethrough which are provided with inwardly extending cutting teeth arranged whereby the teeth of successive cutters extend progressively inwardly from the uppermost to lowermost cutter members, the spaces between the projections and the abutments in conjunction with the sides of the bore and the sides of the cutters providing plural circumferentially spaced passageways longitudinally extending at the sides of the cutter members for the clearance of chips.

2,473,816
DRIVE MECHANISM
Julian L. Perkins, West Springfield, Mass., assignor to Perkins Machine and Gear Company, West Springfield, Mass., a corporation of Massachusetts
Application January 4, 1946, Serial No. 639,021
1 Claim. (Cl. 74—376)

Driving mechanism for a wringer comprising in combination, a support, a drive shaft and a driven gear journalled therein, pinions rotatable on said drive shaft in mesh with said gear, loosely wound coil clutch springs around said drive shaft each having an outer end secured to one of said pinions and provided with free inner ends, a sleeve fixed on said shaft having bores in opposite ends in which inner end portions of the springs are disposed and provided with a longitudinal slot in a side thereof, an actuator slidable up and down in said slot having opposite ends to engage the inner ends of said springs, a collar slidable up and down on said sleeve in engagement with said actuator for operating the same, an operating member rotatable in said support having a part engaging said collar whereby as said member is rotated between neutral and operating positions said collar is moved thereby to move said actuator into and out of engagement with inner ends of said springs, and a spring pressed detent in said support receivable in recesses provided in said member whereby said member is releasably held in neutral or operating position.

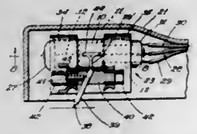
2,473,817
PRODUCTION OF RIBOFLAVIN
Allen S. Phelps, Orangeburg, N. Y., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 11, 1945, Serial No. 634,395
2 Claims. (Cl. 195—35)

1. A proces of producing riboflavin which comprises growing the fungus *Eremothecium ashbyii* in an aqueous medium containing in solution the essential components water, about 0.4 to 4.0% by weight of casein, from about 0.2 to 3.0% by weight of malt extract and, from 0.2 to 4.0% by weight of sugar while aerating the medium.

2,473,818
PROCESS OF PRODUCING RIBOFLAVIN
Allen S. Phelps, Orangeburg, N. Y., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 29, 1945, Serial No. 638,469
4 Claims. (Cl. 195—35)

1. A process of producing riboflavin which comprises inoculating a liquid medium comprising water, a proteinaceous substance, 0.5 to 5% of malt extract, 0.2 to 2.0% by weight of sugar, and from 0.25 to 2.5% by weight of glyceride of a fatty acid with the fungus *Eremothecium ashbyii* and fermenting the said medium.

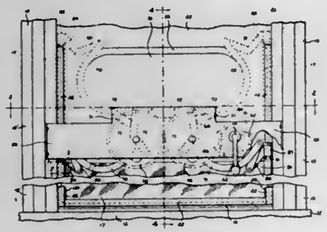
2,473,819
MULTIPLE GAP ARC INTERRUPTER
Ralph R. Pittman, North Little Rock, Ark.
Application July 12, 1946, Serial No. 682,989
8 Claims. (Cl. 175—30)



1. An arc interrupter comprising a plate condenser having an even number of at least four normally insulated conducting plates including a centrally-positioned pair of plates and an additional plate positioned adjacent to and at each side of said pair of plates, said plates being formed to provide a first spark gap between said centrally-positioned pair of plates, a second spark gap between one additional plate and that plate of said pair most remote therefrom, and a third spark gap between the other additional plate and the other plate of said pair, the series arrangement of said spark gaps and said centrally-positioned plates constituting a series circuit including the three spark gaps from said one additional plate to the other, said spark gaps being dimensioned to provide the weakest electrical path from said one additional plate to the other, and the capacitances as measured between each additional plate and the respective centrally-positioned plate being substantially equal and each capacitance being substantially greater than the capacitance as measured between said centrally-positioned plates.

8. An arc interrupter comprising a stack of normally insulated plates of conducting material, one of said plates co-operating with another adjacent plate to provide a predetermined capacitance therebetween and the remaining plates co-operating with respective adjacent plates to provide a plurality of substantially equal capacitances each substantially greater than said predetermined capacitance, and integral portions of said plates extending outwardly to form a series circuit arrangement including all of said plates and a plurality of spark gaps there-between, the arrangement being such that at least said predetermined capacitance is connected across each spark gap.

2,473,820
MAGNETRON-TYPE PHONOGRAPH PICKUP
Hans Kohn Richards, Chicago, Ill., assignor, by mesne assignments, to Raytheon Manufacturing Company, a corporation of Delaware
Application February 20, 1947, Serial No. 729,820
5 Claims. (Cl. 179—100.41)

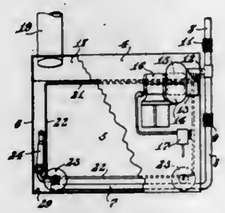


1. A device for translating the sound track of a transcription record or the like into electrical energy comprising a diode with a substantially cylindrical envelope having electrodes arranged for establishing an electron flow transverse of the longitudinal axis of said envelope, a magnet disposed adjacent the exterior of said diode, a pair of U-shaped flux guides affixed one to each end of said magnet and each tightly embracing said diode and producing with said magnet a

path of low reluctance so as to create within said diode a magnetic field extending in the direction of the axis of said envelope, means for varying the flux density within said diode comprising a member of magnetic material disposed adjacent said diode between said flux guides, and means

for moving said member in a path substantially perpendicular to a line interconnecting said flux guides in accordance with the undulations in the sound track of said record, said moving means being provided with a record engaging stylus and supporting said member, and being movably mounted with relation to said magnet.

2,473,821
WINDOW MECHANISM
Harry C. Richardson, Troy, Ohio, assignor to The Troy Sunshade Company, Troy, Ohio, a corporation of Ohio
Application March 9, 1945, Serial No. 581,788
7 Claims. (Cl. 296—44)

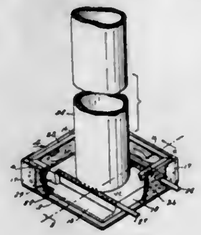


3. Window mechanism of the character described for use in a vehicle or the like comprising a main window, an auxiliary window located directly above and in spaced relation with respect to said main window, operating mechanism located between said windows for raising said main window to a position where it overlaps said auxiliary window, said operating mechanism being confined to the space between said windows and including links connected to the top of said window at the opposite sides thereof, and curved arms pivotally supported in the space between said windows and connected respectively with said links for causing the raising and lowering of said window, said curved arms lying laterally outwardly of said auxiliary window in raised position of the main window, and manually operable means for causing concurrent actuation of said arms in the raising and lowering of said main window, said means being so constructed that continuous operation of the handle in one direction will continuously raise and lower the window, and so that when the resistance of said window to moving approaches the breaking point of the glass the manually operable means will be disengaged from the operating mechanism.

2,473,822
WATER SOFTENING DETERGENT AND METHOD OF MAKING SAME
Edward A. Robinson, Pittsburgh, Pa., assignor to Diamond Alkali Company, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application November 13, 1946, Serial No. 709,439
21 Claims. (Cl. 252—135)

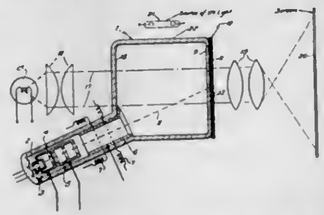
13. A stable water softening detergent material consisting essentially of a mixture of an alkali metal polyphosphate in which the ratio of alkali metal oxide to phosphorus pentoxide is 3:2 or less, said polyphosphate being coated substantially entirely with a material chosen from the group of alkali metal carbonates and alkali metal non-polyphosphate phosphates, and alkali metal metasilicate, said polyphosphate and said metasilicate being maintained substantially out of contact with each other in said mixture by said material.

2,473,823
METHOD OF AND APPARATUS FOR FINISHING GARMENTS
Robert E. Sands, Philadelphia, Pa.
Application March 12, 1945, Serial No. 582,247
12 Claims. (Cl. 34—12)



1. The method of simultaneously finishing a plurality of garments which comprises subjecting said garments in a closed chamber to the action of steam projected upwardly from below said garments whereby a portion thereof will pass directly into the bottom openings of said garments thereby to distend the same and to permeate the fabrics thereof with the steam, and thereafter subjecting said garments without moving the same from or in said chamber to the action of dry heated air to remove any residual moisture remaining in the garments.

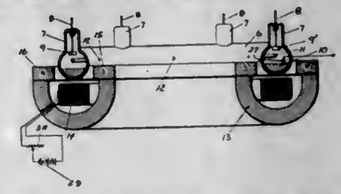
2,473,824
CONCRETE MOLD
Newell S. Shumway, Phoenix, Ariz.
Application July 3, 1946, Serial No. 681,297
4 Claims. (Cl. 25—118)



1. A cement mold for forming gate heads on the ends of cement pipes, comprising a rectangular open top box adapted to enclose the lower end of a pipe set vertically therein, said box including a rectangular base having a face, a rabbet formed around the edges thereof, edges defining the top, bottom, and sides of the gate head to be molded, and a rectangular faced boss formed thereon extending from the top defining edge on said base to a ledge set in from the gate head bottom defining edge, with the sides and ledge face of said boss extending upward and slightly inwardly from the face of said base and rabbets formed along the side edges thereof, together with enclosing plates

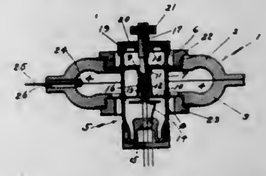
adapted to form the top, bottom and sides of said gate head, hinged together at three corners and latched at one corner and adapted to rest in the rabbet formed around said base; said gate head top forming plate being pierced to receive groove

forming bars; and groove forming bars extending thru said top forming plate and along the side edges of the face of said base boss with their outer edges extending beyond the top side edges of said boss, and their inner edges resting in said rabbets along the edges of said boss.



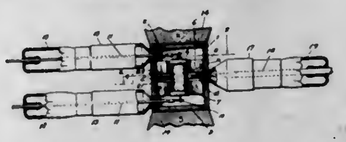
2,473,825
TELEVISION RECEIVER SCREEN
Charles G. Smith, Medford, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application April 23, 1945, Serial No. 589,903
6 Claims. (Cl. 88—61)

1. In combination: a mass of light refractive material, a second light refractive material dispersed in discrete spherical particles throughout the thickness of said mass, said materials having differently variable indices of refraction in the presence of an electric stress thereacross, and means for impressing an electrostatic field across said materials for changing the indices of refraction of said materials whereby the transparency of the composite structure may be varied in accordance with said electrostatic field.



2,473,826
ELECTRICAL DISCHARGE DEVICE
Charles G. Smith, Medford, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application November 30, 1945, Serial No. 632,072
12 Claims. (Cl. 250—27.5)

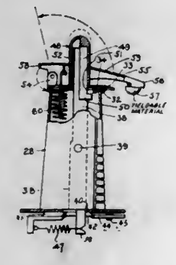
1. A gaseous discharge device comprising an annular envelope containing a body of mercury providing an annular cathode, an annular anode spaced from said cathode, means for establishing an arc spot on said cathode, and means for imposing a magnetic field across the surface of said



annular cathode effective to impart a retrograde motion to said arc spot.

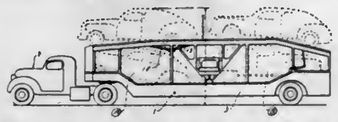
2,473,827
ELECTRONIC DISCHARGE DEVICE OF THE CAVITY RESONATOR TYPE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application October 5, 1943, Serial No. 505,007
13 Claims. (Cl. 315—5)

1. An electronic discharge device comprising a glass envelope, a diaphragm extending transversely through said envelope and having a circumferential portion projecting externally thereof, said envelope being hermetically sealed to said diaphragm on both sides thereof, said envelope having an hermetically sealed space on one side of said diaphragm, a second diaphragm extending across said envelope on the opposite side of said first-mentioned diaphragm from said space and hermetically sealed to said envelope on the side thereof facing said first-mentioned diaphragm.



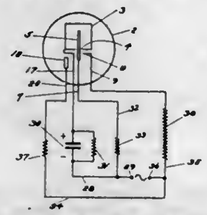
2,473,828
ELECTRON DISCHARGE DEVICE OF THE MAGNETRON TYPE
Percy L. Spencer, West Newton, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application November 15, 1943, Serial No. 510,424
4 Claims. (Cl. 315—40)

1. An electron-discharge device comprising: a cathode; an anode structure spaced from and surrounding said cathode; said anode structure including a plurality of anode arms having elec-



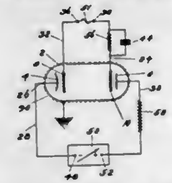
tron-receiving faces adjacent said cathode; each of said anode arms being divided into upper and lower sections by a slot passing through its electron-receiving face, along an axis perpendicular to said face; the slots of all of said anode arms being circularly aligned; and a conducting member supported intermediate said upper and lower anode arm sections; said conducting member traversing all of said slots.

2,473,829
REPEAT DEVICE FOR AUTOMATIC PHONOGRAPHS
Sven A. Stolberg, Chicago, Ill., assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application April 23, 1945, Serial No. 589,756
5 Claims. (Cl. 274—10)



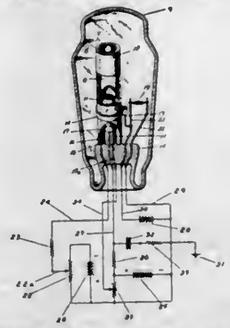
4. In a record changing phonograph, a turntable, a centering pin extending upwardly from said turntable including a shoulder to support a record eccentrically on said centering pin above said turntable, means for shifting said record laterally to bring it into concentricity with said centering pin and to release said record from said shoulder so it may fall onto said turntable comprising a vertical post adjacent said turntable, means on the upper portion of said post to support the peripheral edge portion of said record when said record is eccentrically mounted on said centering pin and supported on said shoulder, said last-mentioned means being of such a size and positioned so as to be free of said record when said record is shifted laterally so as to be concentric with said centering pin, a finger positioned at the upper portion of said post and movable along a radial line interconnecting said centering pin and said post, said finger being adapted to engage the peripheral edge of said record and move said record in a direction to release it from said shoulder, a lever associated with said finger disposed within said post and extending in a direction generally parallel with the axis of said post, means for positively moving said lever to cause said finger to move radially outward from said centering pin, yieldable means tending to move said lever and said finger in the other direction, said means for positively moving said lever being operative during a record changing cycle of said phonograph, and manually operable means slidably mounted on the upper end of said lever including an L-shaped member adapted to cooperate with said post to block the operation of said finger and lever when said L-shaped member is in a predetermined position whereby the phonograph operates to repeat the playing of the record on said turntable.

2,473,830
MOTORCAR CARRIER
Clarence C. Stuart, Dearborn, Mich., assignor to Traffic Transport Engineering, Inc., Dearborn, Mich., a corporation of Michigan
Application August 8, 1946, Serial No. 689,122
10 Claims. (Cl. 296—1)



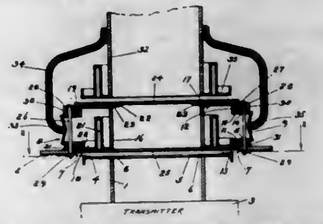
8. In a carrier for wheeled vehicles of the type having upper and lower decks for carrying motor cars one above the other, the combination of two upper tracks comprising the upper deck, each upper track comprising longitudinally aligned front, intermediate and rear track sections, a fixed pivotal support for the front end of said front section, a fixed pivotal support for the rear section and positioned intermediate the ends of said rear section, a pivotal connection between the front end of the rear section and the rear end of the intermediate section, said pivotal connection awinging downwardly when the rear section is swung upwardly about its pivot, a pivotal connection between the front end of the intermediate section and the rear end of said front section, said last pivotal connection moving upwardly when the rear section is elevated to clear a motor car being moved on to the lower deck, a third fixed pivotal support, lever means on said last named support connected to and actuated by said rear track section for raising the pivotal connection between the front and intermediate track sections when the rear track section is elevated whereby the pivotal connection between the front and intermediate track sections will also clear a vehicle being moved on to the lower deck, and removable supports for supporting the rear ends of said rear track sections when lowered to their normal car supporting position.

2,473,831
GLOW TUBE RECTIFIER
Paul W. Stutsman, Needham, Mass., assignor, by mesne assignments to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application February 24, 1944, Serial No. 523,738
8 Claims. (Cl. 315—234)



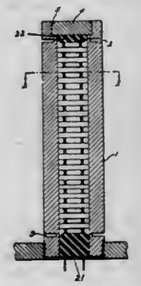
1. In an electric rectifying system, in combination, a rectifier glow discharge tube including an envelope containing an ionizable gaseous medium, a main cathode, a main anode and an auxiliary electrode, means for initiating a discharge between said main cathode and said main anode, and a condenser connected to be charged by said discharge between said main cathode and said main anode, and to deliver voltage for maintaining a continuous discharge between said auxiliary electrode and said main cathode.

2,473,832
ELECTRICAL SYSTEM
Paul W. Stutsman, Needham, Mass., assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application April 14, 1944, Serial No. 531,067
7 Claims. (Cl. 315—275)



1. In an electrical system, a gaseous conduction tube comprising an hermetically sealed envelope containing an electrode assembly comprising an electron-emissive cathode, an anode and two auxiliary electrodes; an anode-cathode circuit comprising said anode and said cathode; a signal input circuit comprising said two auxiliary electrodes; and means comprising a by-pass condenser, connected between said two circuits, for by-passing transient voltage differences that might occur between said two circuits thereby preventing said transient voltage differences from firing the tube.

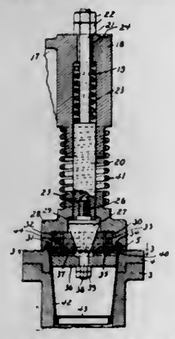
2,473,833
GASEOUS DISCHARGE DEVICE
Paul W. Stutsman, Needham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application January 9, 1946, Serial No. 639,974
3 Claims. (Cl. 176—122)



1. A gaseous discharge device comprising: an envelope containing an ionizable atmosphere; a cathode, an anode, and a starting electrode disposed in said envelope; a dielectric sleeve surrounding said anode and starting electrode; said starting electrode and said anode being disposed adjacent each other; and a second dielectric sleeve surrounding said anode and disposed intermediate said starting electrode and said anode.

2,473,834
COUPLING BETWEEN TRANSMITTER AND WAVE GUIDE SYSTEM
William G. Tuller, Watertown, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application January 25, 1944, Serial No. 519,682
8 Claims. (Cl. 178—44)

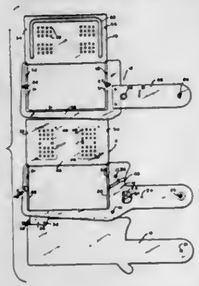
1. A guided wave transmission system including in combination a transmitter, a housing enclosing said transmitter, a wave guide section connected to said transmitter and terminating adjacent an opening in said housing, a second wave guide section in registry with said first-mentioned section, a sheet of insulating material extending across said second wave guide section, said second section being spaced from said first-mentioned section and supported by said housing, a third wave guide section on the exterior of said housing spaced from and adapted to register with said second wave guide section, said third wave guide section being supported independently of said housing, and a flexible flange enclosing the gap between said second wave guide section and said third wave guide section.



2,473,835
MEANS FOR THE INTERCHANGE OF ELECTRICAL AND ACOUSTICAL ENERGY
Edwin E. Turner, Jr., West Roxbury, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Original application August 6, 1942, Serial No. 453,909. Divided and this application March 17, 1948, Serial No. 15,391
5 Claims. (Cl. 177—386)

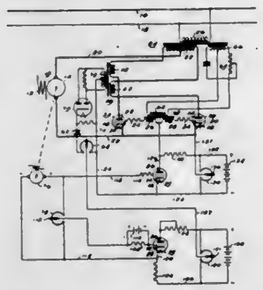
1. Means for the interchange of electrical and acoustical energy comprising a hollow cylindrical element the outer surface of which serves to radiate and receive compressional wave energy, a plurality of crystals arranged alternately crosswise to each other forming crosses with the ends

of the crystals bearing against the walls of the cylinder in positions substantially 90 degrees from each other, said crystals being piezoelectric elements with electrodes positioned on the surfaces of the crystals in planes normal to the axis of the cylinder.



2,473,836
PAPER CUP BEADER
Paul E. Wixon and Clarence E. Chapman, Baltimore, Md., assignors to Joseph Shapiro
Original application January 6, 1948, Serial No. 748. Divided and this application January 29, 1948, Serial No. 5,094
5 Claims. (Cl. 93—36.5)

1. In a cup making machine wherein a paper cup is held in a conical holder having a conical anvil insert having an upstanding annular top end: a vertically movable bracket having a head with a spindle bearing; a spindle longitudinally movable in said head; a cover for the top end of the cup and fitting over the top edge of the anvil insert and having a stepped recess of two diameters, said head being mounted on said spindle; a segmental beader having an annular flange and being located in part in the recess of the larger diameter in said cover and having an annular groove; a spring in said groove for holding the segments of the beader together; a nose on said spindle and projecting through the center of said segmental beader and having a wedging engagement with the segments; a beader cup clamp on the projecting end of said nose and supporting said segments, said clamp having radial grooves and said segments having pins guided in said grooves; a spring continuously urging said spindle in one direction; and means to limit the spindle movement in said direction, said anvil having a bead-forming groove into which the flange on the segmental beader presses the cup material.



2,473,837
DIE AND DIE SET FOR SHOE PARTS AND THE LIKE
Franz Wunder, St. Louis County, Mo., assignor to All-Die, Inc., St. Louis, Mo., a corporation of Missouri
Application December 2, 1946, Serial No. 713,599
5 Claims. (Cl. 164—93)

4. In a die assembly of the type described, a tube plate mount pivotably movable about a fixed member, a tube plate detachably supported in said tube plate mount, a stripper plate mount pivotable with said tube plate mount about said fixed member, a stripper plate detachably supported on said stripper plate mount, means for supporting said stripper plate mount above said tube plate mount for vertical movement with respect thereto comprising a plurality of sleeve

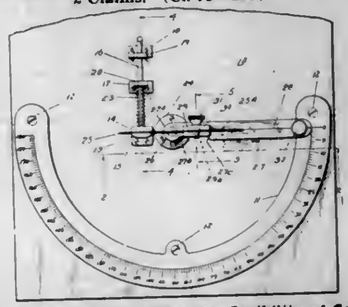
tubes connected to said stripper plate mount, at least one of which receives a sleeve fixed to said tube plate mount and another of which receives said fixed member, and means acting on said stripper plate mount and said tube plate mount for applying a separating force as between these members.

2,473,838
REGULATING SYSTEM
Donald F. Aldrich, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 24, 1948, Serial No. 16,799
10 Claims. (Cl. 318—307)

1. In a regulating system, the combination comprising, a dynamoelectric machine disposed for operation to maintain a given characteristic substantially constant, control means disposed for operation to control the operation of the machine, means responsive to said given characteristic for providing a source of voltage dependent thereon, a vacuum valve disposed to be rendered conducting over the range of zero plate current to maximum steady state plate current in accordance with a measure of said source of voltage over a predetermined range thereof, a resistor in the output circuit of the vacuum valve, another vacuum valve having an anode and cathode connected to impress a voltage on the control means to control the operation of the machine, a control grid for

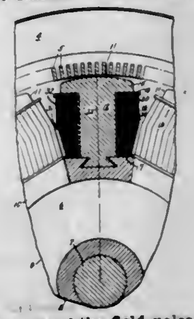
said another valve, and means, including the source of voltage that is dependent upon the given characteristic and the resistor, connected in the grid-cathode circuit of said another valve for controlling the conductivity of said another valve and consequently the voltage impressed on the control means.

2,473,839
CONSTANT-SPEED ELECTRIC MOTOR
Conrad T. Altfather, Basking Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 27, 1947, Serial No. 776,543
8 Claims. (Cl. 318—330)



1. An electric motor comprising a rotor member of magnetic material having a plurality of salient pole portions, a pole member of magnetizable material adjacent the rotor member, said pole member being positioned to attract said salient pole portions of the rotor member to effect rotation of the rotor member, a magnetizing coil on the pole member, a vibratory spring member mounted to vibrate axially of the rotor member, a permanent magnet supported on said spring member in position to be attracted by the salient pole portions of the rotor member, contact means actuated by movement of the spring member for controlling the energization of said magnetizing coil, and a fixed resistor connected in series with said coil, the resistance of said resistor being relatively large as compared to that of the magnetizing coil, so that the time constant of the series circuit comprising the resistor and coil is substantially less than that of the coil alone.

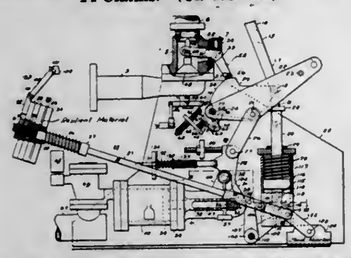
2,473,840
CONICAL PAPER CUP WITH ROUNDED BOTTOM
Walter E. Amberg, Beverly Shores, Ind., assignor to Lily-Tulip Cup Corporation, a corporation of Delaware
Application December 4, 1947, Serial No. 789,608
2 Claims. (Cl. 229—1.5)



1. A truncated conical single piece paper cup of less than sixty degree angle comprising an acute angled substantially smooth frustro-conical side wall and a substantially inner concave spoon serviceable pleated bottom merging with the side wall, said bottom only having a plurality of circumferentially disposed apexially gathered pleats.

2,473,841
FLEXIBILITY TESTER
Mauritz L. Anderson, Arlington, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application June 6, 1946, Serial No. 674,745
2 Claims. (Cl. 73—100)

1. Apparatus for testing the flexibility of flexible linear members, comprising supporting means having attached thereto an arcuate scale, a pivot pin mounted on said supporting means at the center of the arc of said scale, a pointer mounted for rotation on said pin and radially positioned with respect to said scale, means supported on said pointer for clamping the member to be tested, and a second clamping means relatively fixed with respect to said first clamping means and spaced therefrom, said pointer having a zero reference position in which the clamping surfaces of said clamping means are disposed linearly with respect to each other, said clamping surfaces being located on opposite sides of said pin when said pointer is in said reference position, whereby the member to be tested may be clamped between said two clamping means and whereby when said pointer is rotated from said zero position a loop is formed in the tested member between said two clamping means.



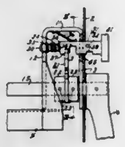
2,473,842
DYNAMOELECTRIC MACHINE FIELD COIL
John S. Askey, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 25, 1947, Serial No. 724,343
20 Claims. (Cl. 171—252)

1. A coil for one of the field-poles of a salient-pole, rotating-field, synchronous dynamo-electric

machine, said coil comprising a plurality of layers of turns of a rectangular-sectioned, glass-insulated wire, with insulating bonding-material for holding together all of the turns in a single solid mass, and with a plurality of the outer layers of turns stepped back, with fewer turns, so as to be successively shorter, as measured parallel to the centerline of the coil, as the outermost winding-layer is approached during the winding-process, so as to provide a tapered outer configuration having discrete steps at the stepped-back places, a filling of an inorganic insulating cement completely filling said discrete steps of the tapered portion, said cement having a substantially uniformly-tapered outer surface, said cement comprising a particulate filler of reasonably good heat-conducting qualities, and a binder, and an encapsulating casing of wrapped tape and a binder, with a hard outside-finish, surrounding the entire coil.

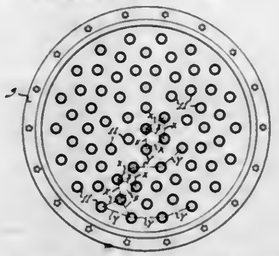
2,473,843
CIRCUIT INTERRUPTER
Benjamin P. Baker, Turtle Creek, and Donald C. Harker, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 28, 1945, Serial No. 580,136
14 Claims. (Cl. 200—53)

1. In a circuit interrupter, a movable contact, means for moving the movable contact to open and closed positions at high speed, a rod, an inertia masa having one portion secured to the rod and having another portion loosely mounted on the rod so as to be movable relative thereto, a compression spring mounted on the rod and having one end seated rigidly with respect to the rod and having the other end biasing the loosely mounted portion against the first-mentioned portion, and a lost-motion mechanical connection between the movable contact and the rod arranged to impart movement to said rod and inertia mass following a predetermined contact movement in the opening direction, said spring enabling movement of said loosely mounted portion with respect to said secured portion to reduce the inertia effect of said mass during the initial closing movement of said contact.



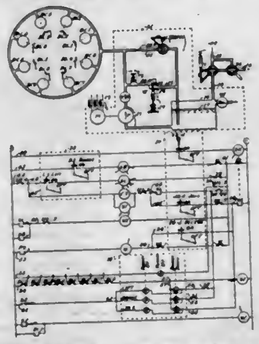
2,473,844
CIRCUIT INTERRUPTER
Benjamin P. Baker, Turtle Creek, Roswell C. Van Sickle, Wilkinsburg, and James M. Cumming, Turtle Creek, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 30, 1945, Serial No. 591,046
4 Claims. (Cl. 200—150)

2. A circuit interrupter of the liquid break type including means defining a piston chamber, means venting the piston chamber at one end thereof, a stationary contact disposed adjacent the vented end of the piston chamber adjacent one side wall thereof, a movable piston member movable within the piston chamber and carrying a movable contact along one side wall thereof, a follower member carried by the piston member to restrict the arc established between the two



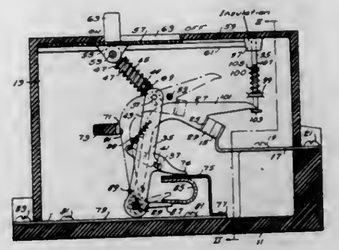
contacts and drawn into the piston chamber along the inner wall thereof, means initially movable with the piston member into the piston chamber to delay the flow of liquid longitudinally of the established arc, stopping means for the last-mentioned means to stop the opening motion thereof to only at this time permit forcing of liquid out of the piston chamber by the pumping action of the piston member.

2,473,845
CONTROL APPARATUS
Herman F. Barsun, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 20, 1945, Serial No. 606,205
6 Claims. (Cl. 74—540)



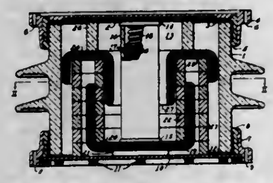
1. In a circuit controlling device, a manually operable switch actuating member having a plurality of switch operative positions, a locking member operative upon movement of the switch actuating member to any one of said plurality of positions for locking said switch actuating member in said switch operative position, said locking member being manually operable to a switch operating position to permit operation of the switch member, means automatically operable for latching said locking member in its switch operating position, and cam means actuated upon movement of said switch actuating member from one switch operative position to another and operative to release said locking member from its switch operating position to a released position to adapt it to lock the switch actuating member upon movement thereof to one of said switch operative positions.

2,473,846
ELECTROACOUSTIC TRANSDUCER
Loy E. Barton, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application November 30, 1942, Serial No. 467,458, now Patent No. 2,450,104, dated September 28, 1948. Divided and this application June 2, 1947, Serial No. 751,745
7 Claims. (Cl. 177—386)



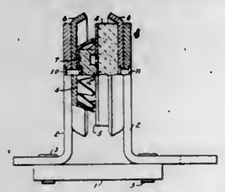
1. An electro-acoustical transducer comprising an acoustic diaphragm, and a plurality of magnetostrictive elements secured thereto at predetermined spaced points thereon, said elements being so related to said diaphragm that each of said elements cooperates with a predetermined closely adjacent mass of said diaphragm such that each of said diaphragm masses is from approximately four to seven times the mass of the element which effectively may cooperate therewith, and said elements being so arranged on said diaphragm that the active spheres of influence of adjacent ones of said elements may effectively be tangent to each other.

2,473,847
LIFTING, BRAKING, AND JACKING SYSTEM FOR VERTICAL-SHAFT ROTATING MACHINES
René A. Baudry, Pittsburgh, and Paul R. Heller, Irwin, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 2, 1947, Serial No. 751,926
18 Claims. (Cl. 171—252)



1. A vertical-shaft rotating machine having a stator-member and a rotor-member; a thrust-bearing, comprising a runner carried by the rotor-member, a plurality of thrust-bearing shoes carried by the stator-member and engaging the runner for supporting the weight of the rotor-member, and an oil-chamber for oil in which said thrust-bearing shoes and at least the lower surface of said runner are immersed; guide-bearing-means for positioning the rotor-member; a braking and jacking means, comprising a brake-ring carried by the rotor-member, and a plurality of hydraulic jacks carried by the stator-member and having brake-shoes, on their tops, in a position to engage said brake-ring in an elevated position of said jacks; an air-tight liquid-reservoir for a liquid for operating said hydraulic jacks; an air-supply means, and associated air-piping, for supplying air to said reservoir at a relatively low pressure suitable for braking said rotor-member but not sufficient to lift said rotor-member, said air-piping including an air-valve which may be set to either supply air to said reservoir or to exhaust air from said reservoir to the atmosphere; and at least three different liquid-conducting piping-connections between said reservoir and said hydraulic jacks, said connections including: a pump-connection including a high-pressure liquid-pump, and motive-means for said pump, operable, at times, to supply liquid from said reservoir to said hydraulic jacks at a pressure sufficient to lift said rotor-member so that said runner is raised off of said thrust-bearing shoes; a slow-flow connection providing for only a slow liquid-flow suitable for gently lowering said runner onto said thrust-bearing shoes after a lifting-operation, said slow-flow connection including a valve; and a fast-flow connection providing for a relatively fast liquid-flow and including valve-means.

2,473,848
CIRCUIT BREAKER
Harold G. Baxter, Baldwin, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 21, 1947, Serial No. 769,915
11 Claims. (Cl. 200—116)

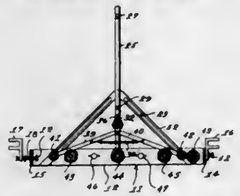


1. A circuit breaker comprising a housing having an opening therein for receiving a handle, an operating handle disposed in said opening, a switch member movable to open and close said circuit, an operating lever for moving said switch member, a slidable member movable by said handle and closing said opening, and an overcenter compression spring operable upon movement of the handle to actuate said operating lever, said overcenter compression spring applying pressure to said slide to seal said handle opening.

2,473,849
LIGHTNING ARRESTER
Edward F. W. Beck, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 13, 1948, Serial No. 20,680
6 Claims. (Cl. 175—30)

1. A lightning arrester comprising a generally cylindrical housing, a spark gap assembly centrally disposed in said housing, a plurality of annular valve elements in the housing disposed in a stack surrounding the spark gap assembly, a plurality of annular valve elements of larger diameter than the first-mentioned valve elements disposed in a stack in the housing surrounding the first stack, and means for electrically connecting said spark gap assembly and said two stacks of valve elements in series.

2,473,850
LIGHTNING ARRESTER
Edward F. W. Beck, Pittsburgh, and John S. Ferguson, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 27, 1945, Serial No. 607,430
7 Claims. (Cl. 175—30)

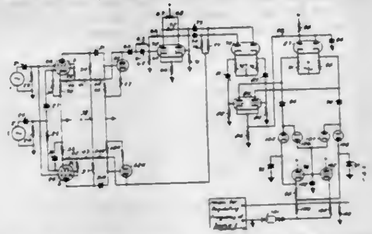


6. A lightning arrester for the protection of low-voltage signal or control circuits, said lightning arrester comprising first and second electrode means spaced apart to form a short spark gap between them, said spark gap having a breakdown voltage less than 3,000 volts and being so short that it is incapable, by itself, in its normal condition, of interrupting a discharge after an excess voltage has passed, a valve-type resistor disposed adjacent said second electrode means and having one side in electrical contact with the second electrode means so as to be in series relation with the spark gap, and a third electrode member disposed in electrical contact with the opposite side of said resistor and extending past the resistor to form a second spark gap with the first electrode means, said second spark gap being relatively long, as compared to the first-mentioned spark gap, and being long enough to be capable, by itself, of interrupting a discharge after an excess voltage has passed, both of said spark gaps having open, unrestricted arc paths, and the second gap being disposed adjacent the first gap so as to be rapidly ionized by a discharge in the first gap.

2,473,851
BACKSTOP FOR ELECTROMAGNETIC DEVICES
Maximilian C. Becker, East Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 6, 1943, Serial No. 497,579
7 Claims. (Cl. 74—526)

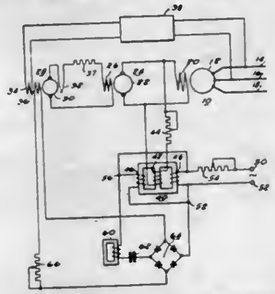
1. A device having a movable member and a backstop for said movable member, the movable member being sensitively responsive to small forces causing it to move away from said backstop so that there will be an air-space therebetween, characterized by said backstop comprising a hard non-metallic member having a rounded contact-surface, and a cooperating hard polished member having a relatively flat contact-surface, one of said backstop-members being carried by said movable member.

2,473,852
DIAPER CLEANING DEVICE
Gene L. Berry, Hailey, Idaho, assignor of one-fourth to Victor Anderson, Hailey, Idaho
Application June 11, 1948, Serial No. 32,376
3 Claims. (Cl. 68—22)



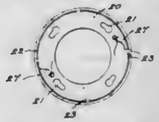
1. A diaper cleaning device comprising a frame, a plurality of spaced brush members mounted transversely in said frame, a plurality of sprinklers transversely mounted in said frame, a pair of vertical post members secured to said frame in transversely opposing relation, a transverse bar member slidably engaged at its ends with said post members, a pair of arms pivoted to each end portion of said bar member, transverse rollers journalled in respective transversely opposed arms, and downwardly diverging track means secured to the sides of said frame, said rollers being slidably engaged with said track means for downward divergent movement responsive to downward movement of said bar member.

2,473,853
FREQUENCY CONTROL SYSTEM
John R. Boykin, Baltimore, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 22, 1946, Serial No. 643,006
8 Claims. (Cl. 250—36)



8. The method of maintaining frequency equality between two alternating voltage sources which comprises deriving from said voltage sources a first beat frequency voltage and a second beat frequency voltage having a phase difference from said first beat frequency voltage which changes

sign when the difference frequency of said sources passes through zero, squaring and differentiating said first beat frequency voltage, superimposing the result of said differentiation on said second beat frequency voltage positively in one current channel and negatively in the second current

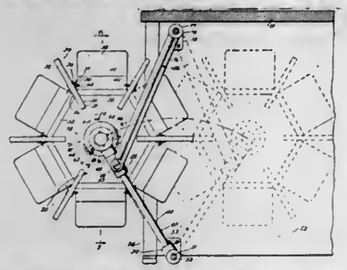


channel, causing current pulses in said first current channel to increase a control voltage by constant positive amounts for each cycle of beat frequency, and causing current pulses in said second channel to decrease said control voltage by equal amounts for each cycle of said beat frequency.

2,473,854
REGULATING SYSTEM
Schuyler Le Roy Bradley, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 20, 1947, Serial No. 787,123
2 Claims. (Cl. 322—24)

1. In a regulating system for a dynamo-electric machine disposed to supply a load circuit, in combination, an exciter for controlling the field excitation of the dynamo-electric machine, a main control field winding for the exciter disposed to be directionally energized to control the excitation of the exciter, means responsive to a change in condition of the load circuit supplied by the dynamo-electric machine disposed for operation to control the directional energization of the main control field winding, an auxiliary control field winding disposed to be energized in one direction only in opposition to a predetermined directional energization of the main control field winding, and means for controlling the energization of the auxiliary control field winding, said means including a saturable core reactor having a direct-current control winding disposed to be energized in accordance with the excitation of the dynamo-electric machine, alternating current windings for the reactor connected to be supplied from a source of alternating current, a circuit including a saturating reactor and a dry-type rectifier connected to be supplied from the saturable reactor, and means connected in the supply circuit for the alternating-current windings of the saturable reactor disposed to provide a potential drop proportional to the current flowing in the alternating-current windings to control the voltage across and the current flow in the circuit including the saturating reactor, the auxiliary control field winding being connected to be supplied by the rectifier.

2,473,855
FLORAL SUPPORT
Frank C. Braun, New York, N. Y.
Application January 17, 1944, Serial No. 518,657
4 Claims. (Cl. 41—12)



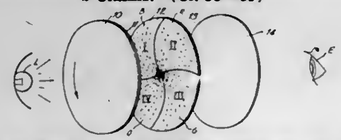
1. A floral support for inserted stemmed flowers, comprising a flat cardboard base member having an outline shape of predetermined decorative configuration, a reinforcing wire secured upon one surface of said base member in substantially parallel relation to said outline shape, a flower-stem-penetrable moss pad substantially corresponding in outline shape to said base member having a flat rearward surface engaged with the forward surface of said base member and a convex forward surface, and a flower-stem-penetrable flexible covering extending around said base member and said pad to bind them together.

2,473,856
CARD FILING EQUIPMENT
George C. Bruen, deceased, late of Chicago, Ill., by Sophie E. Bruen, executrix, Chicago, Ill., assignor, by mesne assignments, of seventy and five-tenths per cent to said Sophie E. Bruen, five per cent to Edna V. Dickinson, Highland Park, Ill., nine per cent to Sarah M. Bullock, Wilmette, Ill., ten and five-tenths per cent to G. A. Stuart, Denver, Colo., two per cent to Jay Fisher, Chicago, Ill., one per cent to Marie Thoenen, Elmwood Park, Ill., one per cent to George H. Fredericksen, Chicago, Ill., and one per cent to E. M. Thorsen, St. Joseph, Mo.
Original application November 8, 1943, Serial No. 509,389. Divided and this application April 25, 1946, Serial No. 664,941
3 Claims. (Cl. 45—3)

1. A mechanism adapted to support a rotary file for swinging movement between a storage position inside a housing and an operative position outside the housing, said housing having opposed and substantially parallel side panels, and said mechanism comprising a pair of links connected to each of said side panels for swinging movement in planes parallel to the panels between said positions on opposite sides of a center line passing through the axes of said swinging movement, one of the links of each of said pairs being swingably supported at the tops of said panels, and the others being supported for swinging movement adjacent the bottom of each panel, one of the links of each pair comprising an arm with a slider mounted thereon for longitudinal movement therealong, and the other being an arm connected for swinging movement to

the panel side of said slider, the former of each of said arms carrying a bearing on the swingable

portion thereof, and a shaft rotatably supported by said bearings for carrying said rotary file.



2,473,857

APPARATUS FOR INSERTION IN COLOR DISPLAY DEVICES UTILIZING POLARIZED LIGHT FOR SECURING CHANGING SATURATION OF SPECIFIC HUES IN FIXED ZONES AS VIEWED BY OBSERVERS

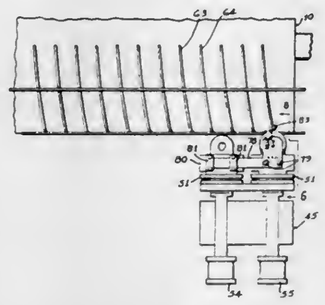
Fford Burchell, New York, N. Y., assignor to Burchell-Holloway Corporation, New York, N. Y., a corporation of New York

Application December 5, 1946, Serial No. 714,330

2 Claims. (Cl. 88—65)

1. A device of the character described for producing the optical effect of changing color saturation in a zone of specific color as viewed by an observer upon its interposition between a light polarizer and a light analyzer one of which is rotatable in its plane comprising an isotropic sheet, a color filter of a chosen specific color applied directly to a zone of said sheet, and a plurality of strips of birefringent material applied side by side to said isotropic sheet in said zone and substantially coextensively with the color filter, said birefringent strips having uniform progressively different angles of orientation of their significant axes, whereby light transmitted through the sheet, color filter and strips from a light source behind the polarizer to the observer in front of the analyzer always has a specific hue in the zone of the chosen specific color of the filter, the saturation of said hue, however, varying progressively in said zone as either the polarizer or analyzer is rotated in its plane.

2,473,858



METHOD AND APPARATUS FOR WELDING STRUCTURAL CAGES

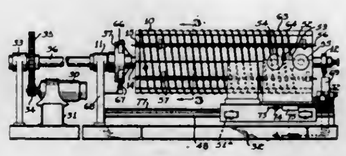
Adolf G. Butler, Hawthorne, Calif., assignor to American Pipe & Construction Company, Los Angeles, Calif., a corporation of Delaware

Original application January 2, 1946, Serial No. 638,700. Divided and this application November 22, 1948, Serial No. 61,381

5 Claims. (Cl. 219—4)

1. In a device for making a wire cage, the combination of a rotatable mandrel; means for winding a continuous wire around the mandrel in the form of a helix; means for securing a longitudinal rod to the loops of the helix exteriorly thereof, said means including a resistance welding unit adapted for axial movement along said mandrel, said welding unit including a contact roller adapted to roll along the longitudinal rod and a circular contact element adapted to sequentially engage loops of the helix; and means for passing

a welding current between the contact roller and the contact element for resistance welding the rod to the loops of the wire helix; and drive means for traversing the welding unit relative to said mandrel with non-uniform motion having alternating acceleration and deceleration periods, occasioned by variable resistance to translation imposed by the contact roller as it approaches and departs from the helix loops.



2,473,859

METHOD AND APPARATUS FOR WELDING STRUCTURAL CAGES

Adolf G. Butler, Hawthorne, Calif., assignor to American Pipe and Construction Co., Los Angeles, Calif., a corporation of Delaware

Application January 2, 1946, Serial No. 638,700

7 Claims. (Cl. 219—4)

1. The method of resistance welding a cross joint betwen two wires comprising the steps of effecting relative motion between a wire-contacting element and the first of said wires while simultaneously maintaining the wires in contact under pressure, causing a welding current to flow through said wires and cross joint, the current being initiated before the contact element reaches the said joint, continuing the welding current while the contact element approaches the cross joint, and discontinuing the welding current when the contact element reaches the cross joint.

2,473,860

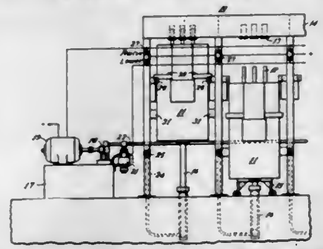
INTERNAL EXHAUST SEAL FOR ELECTRIC LAMPS AND SIMILAR DEVICES

Paul O. Cartun, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York

Application November 9, 1946, Serial No. 708,919

2 Claims. (Cl. 250—27.5)

1. In an envelope having a reentrant glass exhaust tube extending thereinto, a sealing structure in said envelope comprising a closure disc of metal adapted to fuse hermetically tight to glass, and a bimetallic support member carrying said disc and holding it adjacent the mouth of said tube in a position to leave the mouth open to the interior of the envelope and constructed and arranged to press the said disc against the said mouth of the tube to seal it thereto when the parts are heated.



2,473,861

METAL-CLAD SWITCHGEAR

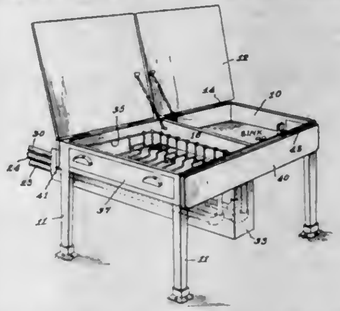
Leonard B. Chubbuck, Hamilton, Ontario, Canada, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application June 15, 1946, Serial No. 676,895

3 Claims. (Cl. 175—298)

1. In a metal-clad switchgear, in combination, a plurality of cell structures, a circuit breaker for each cell, a fluid-pressure device in each cell for raising the circuit breaker in that cell, a single header pipe for supplying pressure fluid to all of the devices, an individually operable valve for connecting each device to the header pipe, a single discharge valve for releasing the pressure fluid from the header pipe, and individually operable electrical control means associated with each cell for controlling the operation of the discharge valve.

2,473,862



COMBINATION SINK AND DINING TABLE

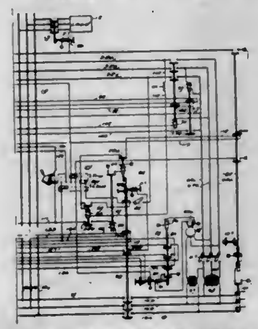
John D. Clawsey, New York, N. Y.

Application March 27, 1946, Serial No. 657,571

2 Claims. (Cl. 312—169)

1. A combination sink and dining table comprising a box, legs supporting the box, a lid for covering the box, said legs being sufficiently long to provide adequate leg room for persons seated around the box when the lid covers the box and serves as a dining table top, said box having a water-tight open sink-compartment below said lid, said box also being provided with a bay therein beneath said lid, a wall within the box, separating the bay-space from the sink-compart-

ment, a door at a vertical side of the box providing access at said vertical side to said bay, and a spigot within said bay beneath said lid from which water may be run into a drinking glass placed through said opened door within said bay with the lid in closed position, said lid, when open, also providing access to said bay and to the spigot located therein.

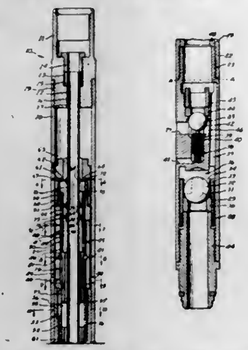


2,473,863

TRANSFER SYSTEM

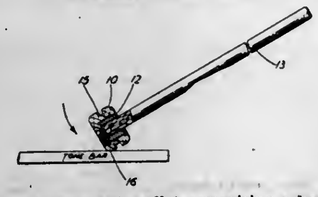
Glen L. Claybourn, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 17, 1947, Serial No. 761,567



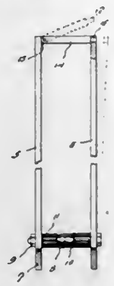
9 Claims. (Cl. 171—97)

7. A transfer system for selectively controlling the connection of a feeder bus to a pair of power sources comprising, a circuit breaker disposed to connect the bus to each source, manual control means actuable to effect operation of each of the circuit breakers, transfer means disposed to operate each of the circuit breakers, relay means responsive to voltage conditions at the sources connected to effect predetermined operation of the transfer means in accordance with the voltages of the sources, and a manual control switch operable to different positions to connect the cir-



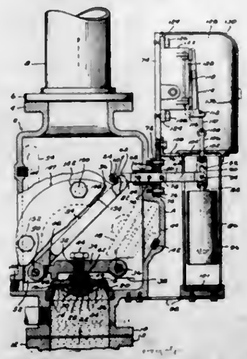
cuit breakers for effecting preferential connection of the bus to one power source or the other under control of the transfer means, or to connect them for operation under control of the manual control means.

2,473,864
HEAVY OIL AND SAND PUMP
Clarence J. Coberly, Los Angeles, Calif., assignor to Kobe, Inc., Huntington Park, Calif., a corporation of California
Application May 13, 1946, Serial No. 669,410
26 Claims. (Cl. 103—46)



1. In a fluid-operated deep well pump, the combination of: a pump cylinder; a pump piston in said cylinder; inlet and discharge valve means connected to one end of said cylinder; a source of high-pressure operating fluid; means for utilizing said operating fluid to move said piston axially in said cylinder so as to pump well fluid from said one end of said cylinder through said valve means; auxiliary valve means carried by said piston; and passage means communicating between said pressure source and said auxiliary valve means, said auxiliary valve means being adapted to provide fluid communication between said passage means and said one end of said cylinder, said auxiliary valve means being normally maintained in closed position but adapted to be opened in response to said piston striking solid foreign matter in said end of said cylinder to admit operating fluid thereto from said passage means.

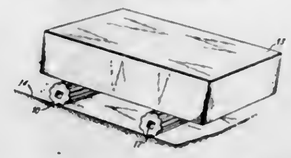
2,473,865
INSTRUMENT MALLET
Bruce W. Dane, Newark, N. J.
Application November 15, 1946, Serial No. 710,135
2 Claims. (Cl. 84—404)



1. An instrument mallet comprising a head of rigid material said head having substantially parallel opposed surfaces, a metal bushing centrally disposed in said head, a resilient handle having one end inserted into said metal bushing, a circumferential groove in the edge of said head, and a covering of yarn encasing the said head.

2,473,866
WRECKING TOOL
Weyburn J. Davies, Pond Creek, Okla.
Application January 10, 1945, Serial No. 572,180
1 Claim. (Cl. 254—131)

A wrecking tool comprising a pair of handles, straight prying arms extending in an inclined position from the lower ends of the handles, a rod connecting the handles at the junction of the arms therewith, a spacing member on said rod for maintaining the handles and arms in spaced parallel relation with respect to each other, and a cross handle pivotally connected to the outer end of one handle and detachably connected to the outer end of the other handle.

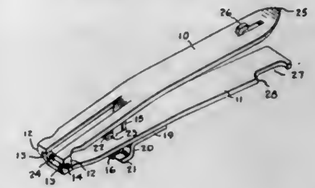


2,473,867
REMOTE CONTROL VALVE
John H. Derby, Scarsdale, N. Y.
Application February 28, 1946, Serial No. 650,803
5 Claims. (Cl. 169—19)

1. A remote control valve of the type in which a valve housing, adapted to be interposed between the water main and a normally dry pipe, has

therein a valve seat on the inlet from the main, a cooperating valve, a locking lever located entirely within said housing and fulcrumed therein to swing between valve locking and valve releasing positions, a latch for positively engaging and holding said locking lever in valve locking position, and means for tripping said latch including a weight and release mechanism trippable by remote control for holding said weight in its potential trip relation to the latch, characterized by the fact that the latch comprises a single lever extending through, fulcrumed upon the outside of and directly trippable from outside said valve housing, that said latch carries a roller at its inner end and that the locking lever has a notch in is latch-engaging end cooperating with said roller to latch the lever in valve locking position.

2,473,868
LOAD SUPPORTING ROLLER
Edward A. Domke, Ann Arbor, Mich., assignor of twenty-four per cent to Leonard E. Riemer and twenty-four per cent to Stephen L. Piatkowski, both of Ann Arbor, and twenty-four per cent to Howard E. Logan, East Ann Arbor, Mich.
Application June 12, 1947, Serial No. 754,310
2 Claims. (Cl. 280—3)

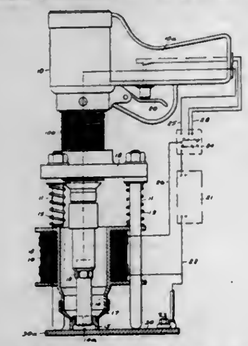


1. A roller of the kind described and having the form substantially that of a polygonal prism including flat faces extending in the direction of the axis thereof but having between each two faces a fluting extending in the same direction, said roller having at each end an aperture for application of means for rotation of the roller around its axis.

2,473,869
GOBLET BUFF
Edwin F. Doyle, Amityville, N. Y., assignor to Barker Brothers, Inc., Brooklyn, N. Y., a corporation of New York
Application June 22, 1948, Serial No. 34,487
18 Claims. (Cl. 51—193)

1. The method of constructing a goblet buff having an oval-shaped end, comprising assembling a stack of similar fabric discs, providing an axial hole through the stack of discs, firmly securing the stack of discs together by means of a circular series of securing means extending through all of the discs about mid-way between the axial hole and the periphery of the stack, cutting a cylindrical cavity in the assembled stack axially of the hole and inside the securing means to a depth approximating one-half the depth of the stack, forming a circular series of holes within the confines of the cylindrical cavity extending parallel to said axial hole and opening through the bottom of said cavity, assembling a second stack of fabric discs having a diameter approximately the same as the discs of the first stack and providing therethrough a circular series of holes matching the holes in the first stack, positioning the second stack over the cavity of the first stack lacing a cord through the series of holes of the two stacks of discs so that each section of the cord extends through both stacks, and thereafter tightening the laced cord and pulling the central portion of the second stack of discs into the cavity in the first stack of discs, thereby causing the second stack of discs to ruffle and fold into a structure providing an oval exterior surface forming the end of the buff.

2,473,870
PRY OFF TYPE JAR CAP REMOVER
Nathaniel Eastman, New York, N. Y., assignor to New England Plastic Co. Inc., Leominster, Mass., a corporation of Massachusetts
Application February 8, 1945, Serial No. 576,807
2 Claims. (Cl. 81—3.36)

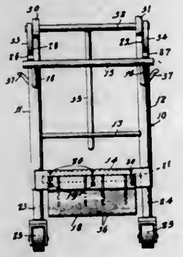


1. An opener for jars of the type having a shoulder spaced from the edge of the cover skirt comprising a pair of spaced pivoted members, parts of which are formed to serve as handles, means for normally holding said members spaced apart, a foot depending from an intermediate portion of one of said members, the other of said members having an opening in line therewith, said foot projecting through said opening and terminating in a toe which is bent towards the pivotal connection of said members and a projection on the other member beside the part of said foot which projects beyond said opening, said projection terminating in a finger which also extends towards the pivotal connection of said members, said toe and finger being of a thickness to be inserted between said jar shoulder and the edge of the cover skirt, whereby movement of the handles toward each other will cause the toe and finger to move away from each other and lift the caps from the jar.

2,473,871
ELECTRIC ARC WELDING
Harry Edels, Stafford, England, assignor to The English Electric Company Limited, London, England, a British company
Application June 18, 1946, Serial No. 677,483
In Great Britain June 18, 1945
6 Claims. (Cl. 219—4)

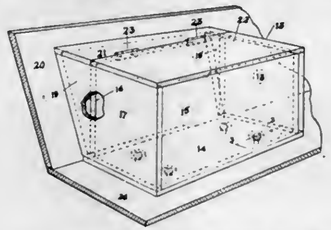
1. Welding apparatus for arc welding a pillar to a ferro-magnetic surface, in a position near to the edge of the surface, comprising support means disposed to engage said surface, holding means for the pillar movable on the support means, and means to render substantially sym-

metrical the magnetic field in the surface material in immediate proximity to the arc, including an



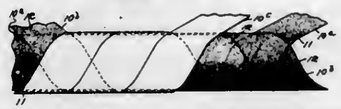
electromagnet slidably mounted on the support means.

2,473,872
PROCESS OF MANUFACTURING ANTHRAQUINONE-C-ARYLTHIAZOLES
Maurice H. Fleysher, Buffalo, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application filed December 7, 1946, Serial No. 714,895
15 Claims. (Cl. 260—303)



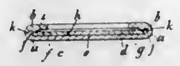
1. In the process of producing an anthraquinone C-arylthiazole which comprises heating a reaction mixture containing an aminoanthraquinone, sulfur, an omega-polyhalogenated arylmethane and an inert organic solvent as the reaction medium, the improvement which comprises including in the reaction mixture a member of the group consisting of carbocyclic hydroxy compounds and omega-halogenated aryl methane condensation products thereof.

2,473,873
WHEELED CARRIER
Elmer K. Fosbender, Los Angeles, Calif., assignor to Boypower, Inc., Los Angeles, Calif., a corporation of California
Application October 14, 1946, Serial No. 703,203
7 Claims. (Cl. 280—44)



1. In a lifting carrier of the class described, the combination of a frame having spacer parallel side elements, posts slidably mounted on the side elements, a roller carried at the lower end of each post, a lifting foot on the frame, the upper ends of the side elements being longitudinally notched to define side-opening recesses, bearings at the extreme upper ends of said side elements, a shaft rotatably mounted in said bearings, cams fixed on the shaft operable in said recesses, follower elements on the posts adapted to be engaged with the cams, and means to turn the shaft.

2,473,874
BAIT BOX
Jonett C. Ganong, Mahopac Falls, N. Y.
Application March 16, 1948, Serial No. 15,090
6 Claims. (Cl. 9—1)

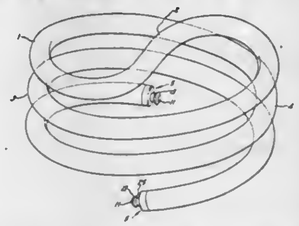


1. In a boat a receptacle adapted to contain bait or the like, a releasable attachment securing said receptacle to the bottom of the boat and permitting ingress of water to the receptacle, said attachment comprising a nipple passing through registering bores in the receptacle bottom and the boat bottom, said nipple being removably secured in the bore of the boat bottom making a watertight connection therewith, said nipple also being releasably secured to the bore of the receptacle bottom and having a seal between said nipple and the receptacle bore.

2,473,875
TUBES, PIPES, AND THE LIKE
Paul R. Goldman, Andover, Mass., assignor to Plymold Corporation, Lawrence, Mass., a corporation
Application June 27, 1942, Serial No. 448,819
2 Claims. (Cl. 138—79)

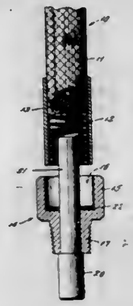
1. As a new article of manufacture, a tubular curvilinear rigid sleeve fitting comprising a plurality of spirally wound concentrically superposed and interbonded wood veneer strips presenting a hollow and initially longitudinally curvilinear tube, at least one of the strips being spiralled oppositely to the next underlying strip and each strip being laterally overlapped upon itself continuously throughout each turn of each strip to a selected maximum axial extent in each turn proportionate to the longitudinal curvature for the given sleeve fitting as initially wound and to a greater axial extent at its concave than at its laterally opposite convex longitudinal portion by a lap differential also proportionate to the degree of said curvature as initially wound, and polymerized bonding means between adjacent strips and between self-overlapped portions of individual strips.

2,473,876
SLIDE RULE
Heinz Herbert Goldstaub, Snaresbrook, England
Application April 22, 1946, Serial No. 663,866
In Great Britain April 30, 1945
3 Claims. (Cl. 235—70)



2. In a slide rule an elongated moulded casing section having a window therein, a second elongated moulded casing section, said first casing section having elongated recesses therein with a sidewall of each recess undercut, and ribs projecting from the second casing section extending lengthwise thereof adapted to snap into said recesses and maintain the casing sections in assembled relationship.

2,473,877
LUMINESCENT SHOE
Joseph Goldstein, Brookline, Mass.
Application May 11, 1948, Serial No. 26,359
8 Claims. (Cl. 250—71)



2. A shoe having a phosphorescent material applied as an integral part of the shoe to a visible part thereof providing a left or right indication and indicating in association therewith where the forward part of the foot may be inserted when stepping into the shoe.

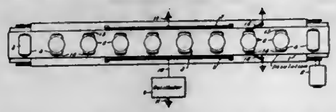
2,473,878
ELECTRIC LAMP OF DOUBLE SPIRAL CONVOLUTION
Alfred Greiner, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application November 25, 1947, Serial No. 787,949
3 Claims. (Cl. 240—51.12)

1. An elongated tubular electric lamp of bifilarly coiled configuration, having its ends extending substantially tangentially of the coil and terminating at diametrically opposite sides of the coil substantially in a common plane normal to the longitudinal axis of the coil with said ends facing in opposite directions, and bases on said ends having socket engagement means thereon.

2,473,879
FLEXIBLE METAL HOSE CONNECTION
Stephen Guarnaschelli, Naugatuck, Conn., assignor to The Brockway Company, Naugatuck, Conn., a corporation of Connecticut
Application March 11, 1947, Serial No. 733,842
2 Claims. (Cl. 285—74)

1. In combination with flexible metal hose having a sheath of wire braid, a fitting having a cylindrical cavity enclosing the end of the hose, a thin cylindrical metal sleeve embracing the hose and its sheath at the end thereof and slidably fitting into said cylindrical cavity, and a mass of solder bonding the tubing of said hose to the base of said cavity, forming a bond between said sleeve and braided sheath as well as between said fitting and said sleeve, and entering the interstices of the braided sheath.

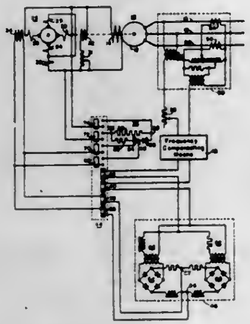
2,473,880
CLEANING METAL CATALYSTS WITH ALCOHOLIC CAUSTIC SOLUTION
Marion H. Gwynn, Mountain Lakes, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application August 11, 1942, Serial No. 454,429
3 Claims. (Cl. 252—414)



1. The process of removing from cages of spent hydrogenation catalyst of the group consisting of nickel catalyst, copper catalyst and cobalt catalyst, resinous material deposited on the catalyst while catalyzing a reaction of the group consisting of hydrogenation, dehydrogenation, hydrofining, disproportionation and desulfurization of organic compounds containing oxygen in the molecule, which comprises immersing the cages of resin-contaminated catalyst in a solution of caustic soda in ethylene glycol at a temperature within the range of 150° to 300° C., said solution containing from 1 per cent to 20 per cent by weight of caustic soda, and then washing the catalyst with water.

2,473,881
HIGH-FREQUENCY DIELECTRIC HEATING APPARATUS
Richard H. Hagopian, Halethorpe, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 25, 1946, Serial No. 679,078
4 Claims. (Cl. 219—47)

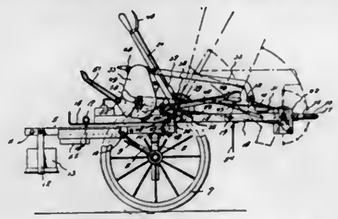
1. A dielectric heating system comprising means for establishing a dielectric field, said



side elements, a roller carried at the lower end of each post, a lifting foot on the frame, the upual strips.

means comprising a pair of spaced primary electrodes, a conveyor means having a plurality of spaced heating stations, said conveyor means successively progressing said stations between

said primary electrodes, each of said stations comprising work-receiving means and auxiliary field-affecting electrode-means secured to said conveyor means.



2,473,882
REGULATING SYSTEM
Edwin L. Harder and Carroll E. Valentine, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 29, 1945, Serial No. 631,726
7 Claims. (Cl. 322—77)

1. In a regulating system for a dynamo-electric machine, in combination, an exciter for supplying the field excitation of the dynamo-electric machine, a pair of circuits disposed to be connected in parallel circuit relation across the exciter, one of the parallel circuits consisting of a resistor having an adjustable tap, the other of the parallel circuits consisting of a resistor and a non-linear impedance connected in series circuit relation through a fixed tap therebetween, and a control field winding for the exciter disposed to be connected to the adjustable tap and the fixed tap to be directionally energized in accordance with the potential at the adjustable and fixed taps.

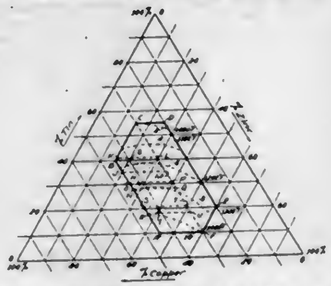
2,473,883
POWER-OPERATED PORTABLE GENERAL UTILITY MACHINE
Henry S. Harvey, West Branch, Iowa
Application February 13, 1945, Serial No. 577,701
7 Claims. (Cl. 74—16)

1. An apparatus of the class described comprising a frame, a tool mounting including a shaft journaled therein and adapted for attaching a tool to the shaft, a support pivotally attached at one end of the frame, means pivotally mounting the tool mounting on the support, said support and tool mounting being adapted for independent vertical swinging movement, a power plant mounted on the frame, means operatively connecting the power plant with the tool shaft, means for raising and lowering the sup-

port and the tool mounting, said raising movement of the support operating to interrupt the drive connection for the shaft, and means independent of said first means for raising and lowering the tool mounting.

2,473,884
CONTACT MEANS
Carl C. Hein, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 7, 1946, Serial No. 667,988
3 Claims. (Cl. 175—366)

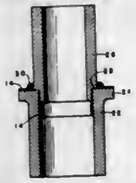
1. In combination with a dry-contact rectifier for a counter-electrode which is relatively fragile, a contact washer separated from said counter-electrode by an intervening layer of silver-base lacquer.



2,473,885
MONOAZO DYESTUFFS
Basil Jason Heywood, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application August 3, 1945, Serial No. 608,843. In Great Britain August 28, 1944
6 Claims. (Cl. 260—205)

1. A monazo dyestuff being the diazo of a para nitro aniline which is devoid of sulfonic acid, carboxylic acid and cyano groups coupled with the sulfuric acid ester of an N-hydroxyalkyl-N-aryloxy-alkyl-aniline in which alkyl of both the hydroxyalkyl and the aryloxyalkyl groups has 2 to 5 carbons and aryloxy of the aryloxy-alkyl group is from the group consisting of phenoxy, tolyloxy, chlorophenoxy and naphthoxy, said coupling component being devoid of sulfonic acid and carboxylic acid groups, said coupling being para to the nitrogen atom.

2,473,886
BRAZING ALLOY
Frederick C. Hull, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 30, 1947, Serial No. 758,204
5 Claims. (Cl. 75—134)

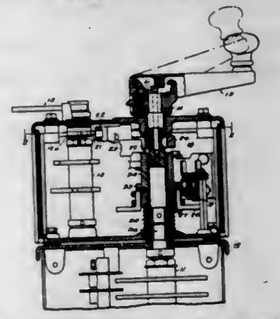


1. A brazing alloy consisting of copper, tin and

zinc in amounts lying within the field defined by

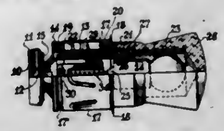
lines drawn between points ABCDEFA in the ternary diagram of the accompanying drawing.

2,473,887
PROTECTING METAL SURFACES DURING SOLDERING AND BRAZING PROCESSES
Charles H. Jennings, Forest Hills, and Edward R. Gamberg, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 29, 1945, Serial No. 638,359
3 Claims. (Cl. 113—112)



1. In the method of applying molten soldering metal to selected areas of a member, the step comprising applying to the member at the edge of the selected areas without covering the selected areas a coating of a composition comprising as its essential ingredients a polymeric organosilicon oxide binder and a finely divided refractory inorganic substance in an amount equal to at least 25% of the weight of the organosilicon oxide, applying a soldering flux and solder to the selected areas outlined by the coating and heating the solder and soldering flux to a temperature sufficient to melt the solder, the coating preventing the flow of flux and solder beyond the areas so outlined.

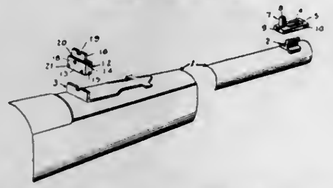
2,473,888
LEAD-IN WIRE FOR ELECTRIC LAMPS AND SIMILAR DEVICES
Paul B. Jordan and Marvin Pipkin, Cleveland Heights, Ohio, assignors to General Electric Company, a corporation of New York
Application June 10, 1947, Serial No. 753,780
3 Claims. (Cl. 176—126)



1. An electrical device comprising a sealed envelope, a filament therein, and lead-in wires comprising an inner portion located within said envelope and connected to said filament, said inner lead-in wires comprising a drawn composite wire consisting of a copper core and an outer layer of aluminum with an intervening layer of nickel.

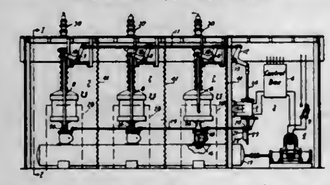
2,473,889
CONTROLLER
Herman C. Krapf, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 10, 1944, Serial No. 562,884
7 Claims. (Cl. 200—5)

1. In a controller, in combination, a main shaft and an auxiliary shaft rotatably disposed side-by-side in the controller, a handle pivotally mounted on the main shaft and movable in a vertical plane and in a horizontal plane, switching means operated by movement of the handle in a vertical plane, spring-biased interlocking means actuated by the auxiliary shaft to prevent operation of said switching means by said movement of the handle under predetermined conditions, interlocking means rotated by the main shaft and cooperating with said spring-biased interlocking means to prevent rotation of the main shaft except when the auxiliary shaft is in a predetermined position and to prevent rotation of the auxiliary shaft except when the main shaft is in a predetermined position, and spring-biased means for preventing vertical movement of the handle except when the main shaft is in a predetermined position.



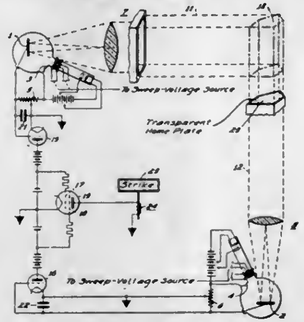
2,473,890
IGNITER AND LAMP PLUG
Alfred J. Kroll, Forestville, and Arthur W. Schnick, Meriden, Conn., assignors to The Cuno Engineering Corporation, Meriden, Conn., a corporation of Connecticut
Application February 20, 1948, Serial No. 9,756
7 Claims. (Cl. 171—97)

7. A combination igniter and lamp plug comprising an igniter unit having a central stud, two tubular extensions secured to said stud, one inside the other, the inner extension constituting a switch member electrically connected to said igniter stud and the outer extension having a



sleeve portion with a contact rim adjacent the igniter unit for grounding in a supporting socket, a tubular member having a switch contact portion at one end rotatable about said switch member within said sleeve portion, the other end of said tubular member constituting a lamp socket, a lamp bulb in said socket having a center contact connected to the first-mentioned switch member, a knob secured to said tubular member and housing said lamp bulb and an outer spring-pressed ring slidably mounted on said outer sleeve for mounting in a supporting socket.

2,473,891
RIFLE SIGHT CONVERSION ATTACHMENT
Urban Lillard, Miami, Fla.
Application June 14, 1946, Serial No. 676,706
1 Claim. (Cl. 33—59)

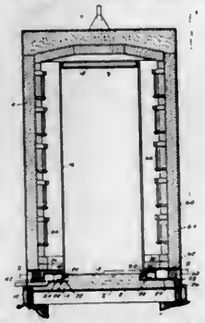


In a device of the class described, the combination of an elongated body provided with an upper and a lower longitudinally extending slot, said slots extending the length of said body, and open at their ends, a sight leaf set down in the upper slot, said sight leaf provided in one side with an elongated screw-receiving notch, a screw on one side of said body, and extending into said elongated screw-receiving notch, and a pair of screws on said body near its lower edge and extending into said lower longitudinally extending slot.

2,473,892
CIRCUIT INTERRUPTER
Leon R. Ludwig, Wilkinsburg, and Benjamin P. Baker, Turtle Creek, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 5, 1944, Serial No. 566,710
2 Claims. (Cl. 200—148)

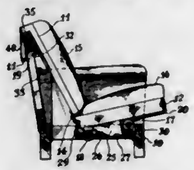
1. A multi-pole circuit interrupter of the compressed gas type including an enclosed housing containing air at atmospheric pressure, a plurality of pairs of high-voltage terminal bushings, means including the roof portion of the housing for mounting substantially vertically the pairs of high-voltage terminal bushings in spaced side-by-side relationship, an arc-extinguishing unit disposed at the lower end of each terminal bushing, a conducting cross-bar for each pair of terminal bushings to electrically connect the two units of each pair of terminal bushings in electrical series, means including an elongated operating rod extending lengthwise of the housing for simultaneously moving the cross-bars in unison to effect the simultaneous opening and closing of the interrupter, the cross-bars moving downwardly during the opening operation to a position spaced from the arc-extinguishing units to effect thereby two isolating disconnect gaps in each pole of the interrupter, a pair of elongated grounded compressed gas reservoir tanks disposed below the arc-extinguishing units and spaced laterally apart to accommodate vertical travel of the cross-bars, a short length of insulating conduit pneumatically connecting each arc-extinguishing unit with its respective tank to minimize the pressure drop along the conduit, a compressor disposed within the housing to store gas under pressure within the tanks, and the heat generated by the operation of the compressor diminishing dampness within the housing to obtain more efficient operation of the interrupter.

2,473,893
OBJECT DETECTING AND INDICATING DEVICE
Frederick W. Lyle, Irwin, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 19, 1941, Serial No. 411,509
5 Claims. (Cl. 177—384)



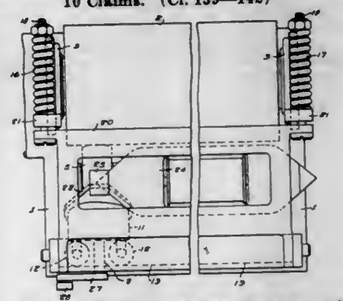
1. In a device for signalling called strikes in baseball games, a transparent home plate, a photo-electric device located beneath said transparent home plate and provided with an optical system for focusing on its screen only such light as traverses a cylindrical volume vertically above said home plate, a second photo-electric device provided with an optical system which focuses on its screen only light passing over said home plate between the height of the order of fifteen inches and the height of the order of sixty inches above said plate, and means responsive to a simultaneous increase in illumination on the screens of said two tubes to actuate a signal indicating a called strike.

2,473,894
FURNACE STRUCTURE
Clarence Lynn, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 22, 1945, Serial No. 579,242
6 Claims. (Cl. 263—40)



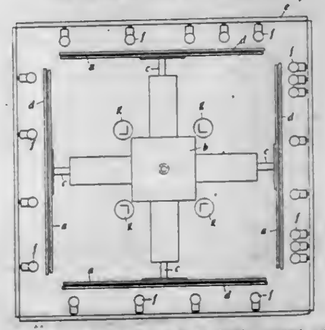
2. A fabricated circular gas-tight hood of a type described, comprising a cylindrical upstanding charge-enclosing section, an annular substantially horizontal skirt section around and

spaced from a bottom portion of said charge-enclosing section, an annular-like curved connection section having an upstanding part lapping said bottom portion of said charge-enclosing section and having an outwardly directed part lapping said skirt section, members cooperating with the inner portion of said skirt section



and with said outwardly directed part of said connection section, for forming a low water jacket therewith, said water jacket extending across a minor part only of the width of said skirt section, the top of said water jacket being below the top of said connection section, and water inlet and outlet means for said water jacket, passing through the bottom of said skirt section.

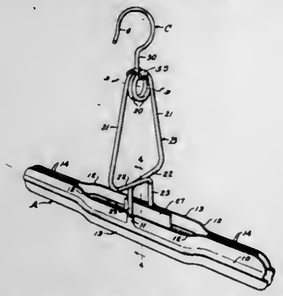
2,473,895
CHAIR
Philip Mednick, Brooklyn, N. Y.
Application September 2, 1947, Serial No. 771,757
1 Claim. (Cl. 155—116)



A reclining chair comprising, in combination, a basic frame structure, a back and a seat supporting portion hingedly connected and slidably arranged upon said frame structure, casters mounted within said frame structure at the top of the front and upon the sides of the latter, the seat supporting portion having channels adapted to slidably engage the casters at the front of the frame structure, brackets secured underneath at the rear upon each side of the seat supporting portion, said brackets being formed with a curvature and a semi-circular recess adapted to engage the casters upon the side of the frame structure, a projection upon each rear end of said brackets adapted to engage the casters upon the sides of the frame structure and arrest the forward movement of the seat supporting portion, the opposite ends of the brackets being adapted to engage the casters at the front of the basic frame structure, whereby further to limit the forward movement of the seat supporting portion, casters arranged near the top and upon the rear of the basic frame structure, channels secured to the slidable back portion and adapted to engage said latter casters, and bends upon the lower ends of said latter channels, whereby to limit the upward movement of the slidable back portion, substantially as shown and described.

2,473,896
FRICTIONAL SERVOMOTOR
Stanley J. Mikina, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 28, 1947, Serial No. 788,346
10 Claims. (Cl. 139—142)

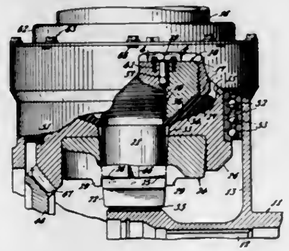
1. A device for deriving translational motion from a source of rotary power, comprising a rotor shaped as a body of revolution with a substantially straight generatrix and revolvable about its geometric axis, a structure movable along said rotor, a pivot journalled on said structure, a roller revolvably mounted on said pivot about a roller axis extending at a right angle to that of said pivot, said roller being in frictional engagement with said rotor, a crank member on said pivot for turning the latter, a cam member having a slot engaged by said crank member and extending along the path of travel of said structure for turning said pivot during said travel.



2,473,897
ELECTRICAL MUSICAL INSTRUMENT
Stanley Leonard Miller, Hinckley, England
Application April 4, 1947, Serial No. 739,381
In Great Britain April 26, 1946
4 Claims. (Cl. 250—41.5)

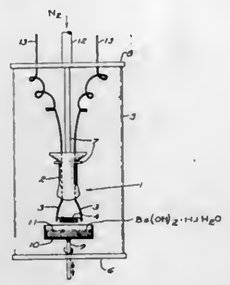
1. In an electrical musical instrument of the type specified, the combination of an assembly of

four pairs of rotary and stationary light controlling screens arranged at right angles to each other in the form of a quadrilateral figure with the screens of each pair situated one behind the other, and with one of the pairs of said screens at each side of said figure, a plurality of light sources arranged outside the screen assembly in association with each pair of said screens, and light-responsive members arranged within said screen assembly so that each such member is exposible through adjacent parts of two pairs of said screens to light emanating from the corresponding light sources.



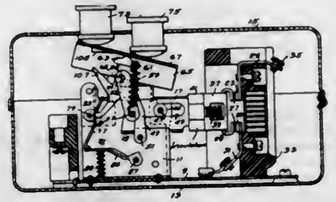
2,473,898
GARMENT HANGER
Charles L. Muntwyler, Oak Park, and Edward J. Frank, Cicero, Ill., assignors to AA Wire Products Co., Chicago, Ill., a corporation of Illinois
Application August 2, 1946, Serial No. 687,832
2 Claims. (Cl. 223—96)

1. A garment hanger in which is comprised a pair of opposed straps each having an outset medial portion and formed on the inner face of each medial portion with an angle channel one end of which extends through to the top of the strap, the end portions of each strap being inset toward the other for meeting engagement, means resiliently interconnecting the two straps of the hanger comprising a wire spring coiled to form a head from which is depended a pair of diverging crossed arms each terminating in a leg from which is laterally extended a foot in parallelism with, but in opposition to, the other foot, adapted to lie within, and interlock with, the angle channel of one strap thereby to interconnect the two straps, a locking plate affixed to the inner face of each strap in engaging relation with the associated foot to secure the same immovably to the strap, each locking plate occupying a position wholly within the confines of the outset medial portion of one strap both longitudinally and transversely thereof, and suspension means extending upwardly from the spring head for attachment to a fixed support.



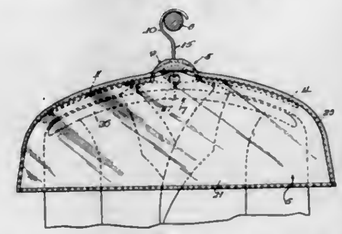
2,473,899
ARTICULATED AND UNIVERSAL JOINT FOR PROPELLERS AND OTHER MECHANISMS
Howard Murphy, Glen Ridge, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application December 11, 1943, Serial No. 513,982
12 Claims. (Cl. 170—160.52)

1. In a variable pitch propeller, a hub, a blade, blade retaining means comprising a substantially radial thrust bearing secured to said hub, a first member rotatably carried by said bearing, a second member disposed at least in part radially inward of said first member supported by and engaging said first member, said members having



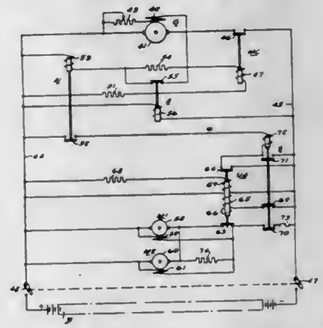
relatively convex abutments in rolling engagement with one another to sustain radially exerted forces due to said blade, and means passing freely through said first member, at least in part, connecting said blade and said second member.

2,473,900
ELECTRODE COATING PROCESS
René Penon, St. Cloud, and Pierre Lemaigre-Voreaux, Paris, France, assignors to General Electric Company, a corporation of New York
Application July 8, 1947, Serial No. 759,590
In France January 15, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires January 15, 1962
2 Claims. (Cl. 316—20)



1. The method of activating electrodes of mercury vapor electric discharge devices which comprises applying thereto a homogeneous powdered composition of barium hydroxide containing, by analysis, between 1 and 1.1 gram molecules of water of crystallization to 1 gram molecule of the hydroxide, heating the electrode in an atmosphere of a non-oxidizing gas to fuse the said composition and cause it to spread over the electrode, passing an electric discharge through the device in a gaseous atmosphere devoid of mercury vapor to decompose the said composition, pumping out gaseous products evolved during the decomposition of said composition, and then introducing mercury into the device.

2,473,901
PUSH BUTTON OPERATED CIRCUIT INTERRUPTER
Lawrence Pierce, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 31, 1947, Serial No. 765,105
8 Claims. (Cl. 200—116)

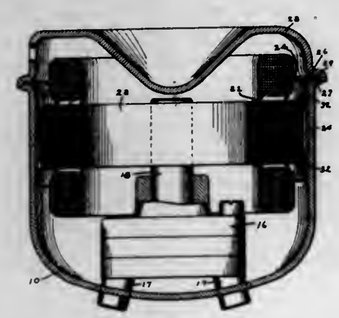


2. In a circuit breaker having a movable switch operating member, the combination of an operating mechanism for moving said switch operating member to open and closed circuit positions comprising an over-center spring, an operator movable to two positions to effect over-center movement of said spring to thereby move said switch operating member to said open and closed circuit positions, manually operable means for moving said operator to said two positions, a spring support member mounting one end of said over-center spring on said operator and movable relative to said operator upon movement of said operator to either one of said two positions to effect over-center movement of said spring, a releasable member operable when released to effect automatic movement of said switch operating member to open position, and means on said operator for engaging and resetting said releasable member upon opening movement of said operator.

2,473,902
UNIT FOR HANGING AND PROTECTING A GARMENT
Charles E. Prahman, Cincinnati, Ohio
Application January 23, 1946, Serial No. 642,841
5 Claims. (Cl. 223—98)

1. As a new article of manufacture, a unitary primary hanger adapted in conjunction with a shoulder protector with an open bottom and a top opening and also a conventional hook equipped garment supporting hanger to hang and protect a garment on the conventional hanger and comprising; (1) a longitudinally elongated open bottom housing shaped and constructed to fit within the top opening of the protector and having fixedly connected thereto an element extending transversely across the lower central portion of its interior and adapted to have hooked onto it the hook of the conventional hanger, (2) a pair of oppositely extending arms projecting outwards from the lower corner portions of the housing and shaped and constructed to support the shoulder protector, and (3) an upstanding hook extending upwards from the upper central portion of the housing and adapted to be hooked onto a support.

2,473,903
ELECTRIC CONTROL SYSTEM FOR VEHICLE RIDE STABILIZING EQUIPMENT
George R. Purifoy, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 23, 1948, Serial No. 22,797
5 Claims. (Cl. 318—440)



1. With hydraulic vehicle stabilizing equipment having a pump motor, in combination, an electric power system comprising buses, a battery normally connected across said buses, an axle generator, a first relay of a given pickup voltage connected across said generator and having contact means disposed between said generator and said buses for energizing said buses from said generator only when the generator voltage is above said pickup voltage, a second relay connected across said generator and having a pickup voltage below said given voltage, and contact means controlled by said second relay and disposed between said pump motor and said buses for connecting said motor across said buses only when said second relay is picked up.

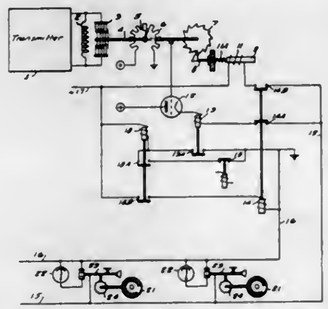
2,473,904
REFRIGERATING APPARATUS
Francis I. Rataiczak, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application April 23, 1946, Serial No. 664,417
6 Claims. (Cl. 230—58)

1. In combination, a housing, a motor including a motor stator, a motor stator mounting bracket carried by said housing and comprising a split ring arranged in engagement with said housing and having axially extending embossed ribs adapted to engage said motor stator, and motor stator positioning ears embossed in said ring limiting axial movement of said stator, said ears comprising inwardly protruding conical portions in which the base of each conical portion faces the motor stator and in which the outer

surface of the conical portion constitutes a cam surface for camming the split ring outwardly as

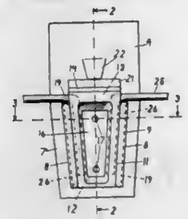
the motor stator is inserted into the ring during assembly.

2,473,905
AUTOMATIC CONTROL SYSTEM
Ronald Reid, Iriam, England
Application July 12, 1946, Serial No. 683,262
In Great Britain July 31, 1945
7 Claims. (Cl. 236—78)



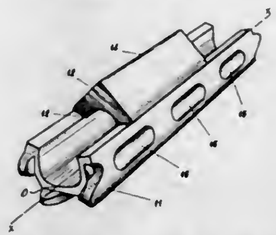
1. An automatically acting electrically operated system for controlling temperatures, pressures and so forth, comprising means for generating an electro-motive force corresponding to the value of the quantity to be controlled, means for providing a constant electro-motive force equal to that corresponding to the desired value of the quantity to be controlled, a pair of thermionic valves connected in push-pull, the said electromotive forces being applied respectively to the control grids of the valves, a pair of thyratrons, the anode of one valve being connected to the control grid of one thyratron and to the cathode of the other thyratron, while the anode of the other valve is connected to the control grid of the other thyratron and to the cathode of the one thyratron, means for feeding the anode-cathode circuits of the thyratrons with alternating current in phase opposition, and means controlled by the thyratrons for influencing the value of the quantity to be controlled in one direction when one thyratron responds, and in the other direction when the other thyratron responds, to a fluctuation in the value of the quantity to be controlled.

2,473,906
COVER CLOTH FOR CLOTHES PRESSING MACHINES
Edward A. Rich, Brooklyn, N. Y., assignor to H. Kohnstamm & Co. Inc., New York, N. Y., a corporation of New York
Application November 13, 1946, Serial No. 709,524
4 Claims. (Cl. 38—66)



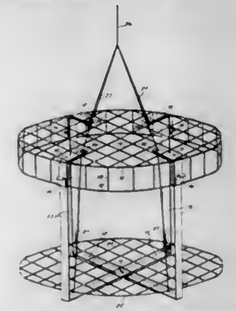
1. A cover cloth for the pressing buck of a clothes pressing machine, said cloth consisting of a woven fabric having a smooth surface, the area of said surface next adjacent the outer edges of the pressing area of the cloth as mounted on the buck being covered with material having a rough work-retaining surface.

2,473,907
REMOTE TUNER CONTROL SYSTEM
Neville R. Ridgely, Jr., and Clarence B. Coleman, Baltimore, Md., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 13, 1948, Serial No. 20,803
5 Claims. (Cl. 318—21)



2. In combination with an electric circuit, a variable circuit element therefor controlled by mechanical movement, an electric motor adapted to cause a predetermined magnitude of said mechanical movement upon being energized by a current pulse, an electron tube having a control electrode and a cathode, means for varying the potential of said control electrode relative to said cathode in correspondence with the amount of said mechanical movement, a distribution circuit connecting a plurality of stations remote from said circuit element in series with said electron tube through a first pair of switch contacts, an indicator at each station connected across said distribution system by a movable switch having a rest-position and provided with means for alternately making and breaking a short circuit across said distribution system a predetermined number of times when it is displaced from its rest-position but for connecting said indicator across said distribution system in its rest-position, and means for energizing said motor with a current pulse each time said dial switch makes and breaks the short circuit across said distribution system.

2,473,908
SUPPORTING MEANS FOR BASKETBALL BASKETS
Herbert Rubin, New York, N. Y.
Application August 2, 1948, Serial No. 41,974
6 Claims. (Cl. 273—1.5)



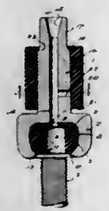
1. A basket-ball basket support comprising a suspension member having a front plate, a hollow shield removably engaging said plate, having a front wall spaced from said plate and having lateral walls extending from said front wall toward said plate, said lateral walls having gaps, a basket ring passing through said gaps, and a prong affixed to said ring, positioned between said lateral walls and extending at an angle to said ring's periphery.

2,473,909
DUCT ELEMENT, INTENDED IN PARTICULAR FOR LAYING ELECTRIC CABLES
Charles Ruchti, Lausanne, Switzerland, assignor of one-third to Henri Besson and one-third to Charles Payot, both of Lausanne, Switzerland
Application April 16, 1947, Serial No. 741,913
In Switzerland June 30, 1939
Section 1, Public Law 690, August 8, 1946
Patent expires June 30, 1959
2 Claims. (Cl. 138—81)

1. A duct element intended in particular for laying electric cables, presenting a generally U-shaped cross-section and having on each end alternate indentations and projections forming a continuous sinuous line, the line of symmetry of which lies in a plane perpendicular to the longitudinal center line of the element, a projection and a recess at each end of the element lying on opposite sides of the axis of symmetry of the cross-section of the element in said plane with said axis passing through the point of reversal of curvature of said sinuous line, the two ends of said element being identical as viewed from the respective ends, whereby either end of an element is adapted to interfit with either end of another like element.

2,473,910
CRAB TRAP
Ignacio L. Ruiz, New York, N. Y.
Application July 28, 1944, Serial No. 546,998
2 Claims. (Cl. 43—105)

1. A crab trap which comprises a trap chamber element having a lower open face, U-shaped supporting elements pivoted to each other and having vertical side members, means on said side members to detachably engage and support the trap chamber element thereon with the open face disposed downwardly, a bait plate adapted to be guided by the U-shaped supporting elements and movable up and down within the supporting elements and adapted to move by gravity to a position below said open face, and connecting means attached to the bait plate and adapted to extend to the hand of the fisherman to permit the vertical movement of the bait plate relative to the trap chamber element.



2,473,911
PRODUCTION OF FLUOROCARBONS
Norman Francis Sarsfield, Runcorn, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application June 14, 1944, Serial No. 540,309. In Great Britain July 19, 1943
8 Claims. (Cl. 260—648)

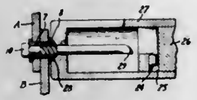
6. A process for recovering fluorocarbon from a liquid mixture of at least one hydrocarbon with partially fluorinated and completely fluorinated products thereof which comprises extracting the hydrocarbon by contacting it in the cold with ethyl alcohol having dissolved therein a small proportion of water and subsequently submitting the mixture to fractional distillation so as to isolate at least one fluorocarbon fraction.

2,473,912
TIRE RELIEF VALVE
Frank W. Schwinn, Chicago, Ill.
Application August 26, 1944, Serial No. 551,277
1 Claim. (Cl. 137—53)

In a tire inflation relief valve, the combination comprising a rigid body member having a longitudinal through bore and having three portions of successively larger external diameter including a small inlet end portion, a cylindrical mid-portion separated from the inlet end portion by a shoulder, and a large outlet end portion, said outlet end portion being longitudinally counterbored and formed to provide a cup-shaped recess having rounded corners and an outer rim which extend inwardly of the recess in a radial direc-

tion, a substantially cup-shaped resilient member disposed in said recess and having an opening in its end wall aligned with said through bore, said cup-shaped member being retained in position by said radially extending outer rim, the open end of said cup-shaped member opening outwardly of said recess, said cylindrical mid-portion having a radial bore therein communicat-

ing with the through bore to provide an escape port, and a resilient outer sleeve fitting snugly over said cylindrical mid-portion of the body member to close said port until a predetermined pressure is reached, said resilient outer sleeve having an internal shoulder engaging said shoulder at the end of the cylindrical portion to locate the sleeve.



2,473,913

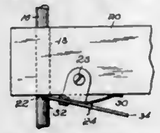
APPARATUS FOR UPSETTING BLIND RIVETS HAVING RIGHT ANGLE BEND IN STEM

Ernest H. Shaff, Spring Lake, Mich., assignor to Cherry Rivet Company, Los Angeles, Calif., a corporation of California

Original application November 5, 1942, Serial No. 464,677. Divided and this application September 27, 1945, Serial No. 618,853

1 Claim. (Cl. 218—19)

In an apparatus for setting blind rivets of the type having a rivet body including a hollow shank and head and having therein a setting mandrel with a projecting stem that has a sharply bent end portion extending away from the stem such a distance as to provide a substantial gripping portion, the combination of a casing member having a front abutment end engageable with the end of the rivet opposite to the shank thereof, an actuator mounted for movement relative to said casing member in the direction of the longitudinal axis of said engaging member, a transverse slot in said actuator extending through the end thereof disposed toward the abutment end of said casing member from the periphery thereof to a point somewhat beyond the axis of said actuator, a transverse recess in said actuator at the rear of said slot extending from said slot at a sharp angle and for a substantial distance to receive the bent end of said stem when said stem is inserted laterally through said slot, and a lateral slot extending through the end of said casing member alignable with said slot in said actuator to permit the passage of the stem of the rivet laterally with respect to both the casing member and the actuator to dispose the bent end of the stem in the recess in the actuator.



2,473,914

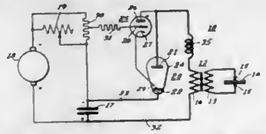
LATCH FOR DROP-SIDE CRIBS

Harold F. Shaw, Leominster, Mass., assignor to F. A. Whitney Carriage Company, Leominster, Mass., a corporation of Massachusetts

Application February 24, 1945, Serial No. 579,614

3 Claims. (Cl. 5—100)

1. In a crib comprising end members supporting vertical guide rods and a drop side arranged between them having top and bottom rails provided with apertures to pass said rods for vertical movement of the side along the same, the rods presenting horizontal shoulders, latches at the ends of the top rail, each comprising a plate underlying the rail, pivoted on a horizontal axis, spring pressed to a normal position inclined to the rail and having a nose portion which then intersects the aperture and is adapted to underlie a shoulder, the plate having a tail portion by pressure on which it may be swung against the spring to free said nose portion from the rod.



2,473,915

HEATING AND WELDING SYSTEM

Joseph Slepian, Pittsburgh, and Alfred B. White, Edgewood, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

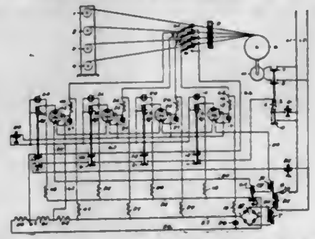
Application June 21, 1941, Serial No. 399,084

27 Claims. (Cl. 320—1)

1. A power system comprising, a condenser, a resonant charging circuit connecting the condenser to a source of electrical energy to produce an oscillating charging current of a relatively low frequency, a separate discharging circuit including an inductive load device, valve means having control electrode means operable to connect the discharging circuit to the condenser to produce a relatively high frequency oscillatory discharge of the condenser through the inductive load device, and means including a control circuit energized in accordance with the charge of the condenser to control the energization of the control electrode means for controlling the operation of the valve means.

2,473,916

RELAY SYSTEM



Frederick D. Snyder, Milton, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

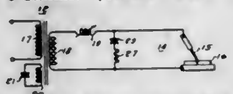
Application August 15, 1946, Serial No. 690,795

6 Claims. (Cl. 28—51)

1. An indicating protective control system for machinery for fabricating strand material and the like, comprising a motor, a contactor for controlling said motor, a plurality of differently located control elements responsive to faulty con-

dition of the material, a plurality of control assemblies having each an electromagnetic relay and an indicating means and including each a normally nonconductive electronic trigger tube in parallel connection to said relay, each of said relays having a contact and a relay coil for controlling said contact, an energizing circuit connected across said relay coils so as to cause said relays to be normally in picked-up condition and to drop out when said tubes are conductive, said tubes having respective grid circuits connected to

said respective control elements so as to trigger said respective tubes when said elements respond to fault, circuit means disposed for providing trigger voltage for said grid circuits and having a circuit connection attached to said control elements and extending in series through said relay contacts so that when one of said elements has caused triggering of the appertaining one tube said control elements are rendered temporarily ineffective to thereafter trigger other tubes, said relays being connected to said contactor for controlling it to deenergize said motor when any one of said tubes is triggered.



2,473,917

ALTERNATING CURRENT ARC WELDING SYSTEM

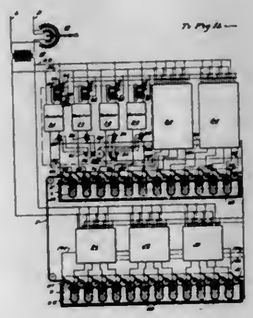
Emil F. Steinert, Williamsville, and Charles H. Jennings, Buffalo, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 13, 1948, Serial No. 8,254

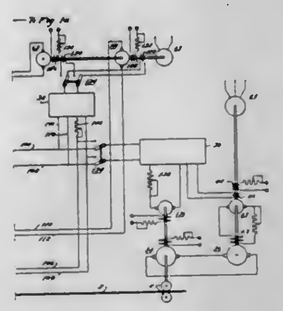
6 Claims. (Cl. 315—246)

1. An arc welding system comprising, a welding transformer disposed to supply welding current to a welding circuit, a capacitor connected in shunt circuit relation with the welding circuit intermediate the transformer and the arc, and a resistor connected in series circuit relation with the capacitor to reduce the arc noise without appreciably reducing the stabilizing effect of the capacitor.

2,473,918



CONTROL SYSTEM FOR ELECTROLYTIC PROCESSES



Glenn E. Stoltz, Pittsburgh, and John R. Erbe, Mount Lebanon, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application December 8, 1942, Serial No. 468,218

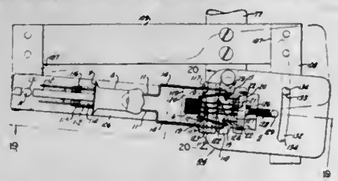
13 Claims. (Cl. 204—211)

1. In a control system for an electrolytic process employing a plurality of electrolytic baths, variable speed means for causing a length of material which is to be electrolytically treated to move through the baths, means for supplying current to the electrolytic baths, separate means for varying the current supplied to the separate baths, regulator means jointly responsive to the current flow in the separate baths, means for selectively connecting said regulator means in controlling relation with one of said current

varying means to maintain a predetermined ratio between the currents supplied to the separate baths, and means responsive to the speed of travel of the strip and the current supplied to at least one of the baths for so controlling said variable speed means as to maintain a predetermined relation between the speed of travel of the length of material through the baths and the current flow in the baths.

2,473,919

METHOD AND APPARATUS FOR ASSEMBLING INCANDESCENT LAMP MOUNTS



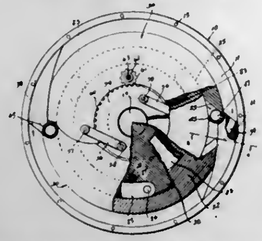
Melvin L. Stone, East Cleveland, Ohio, assignor to General Electric Company, a corporation of New York

Application August 14, 1947, Serial No. 768,643

10 Claims. (Cl. 219—4)

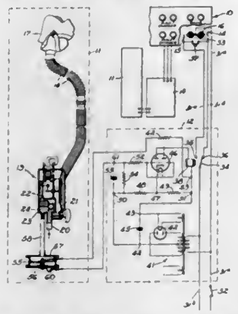
1. In the manufacture of a mount for an electric incandescent lamp of the type having a segmental filament supported by a bridge member fastened to the lead-in conductors of the lamp,

the step of welding the filament and the support bridge to the lead-in conductors while jig-



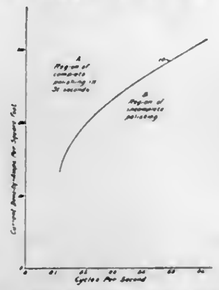
held in predetermined assembled relation with each other.

2,473,920
FRACTIONATION OF LINEAR POLYAMIDES AND PRODUCTS OBTAINED THEREBY
Guy B. Taylor, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 19, 1944, Serial No. 545,721
3 Claims. (Cl. 260—78)



1. A process which comprises agitating a solution of from 1 to 20 parts of polyamide in a mixture of from 45 to 70 parts phenol and from 30 to 55 parts water, allowing the liquid menstruum to separate into a plurality of layers while maintaining the solution within the temperature range of 56 to 95° C., separating at least a portion of one of said layers, and isolating the polyamide from said layer, said polyamide being a synthetic linear polycarbonamide in which the recurring amide groups are an integral part of the main polymer chain and in which the average number of carbon atoms in the segments of the chain separating the amide groups is at least two.

2,473,921
VARIABLE CAPACITY VANE PUMP
Thomas J. Thatcher, Huntington Station, N. Y.
Application February 19, 1946, Serial No. 648,676
3 Claims. (Cl. 103—120)



1. A fluid pump comprising a housing providing an annular receptacle, a shaft journaled in said housing, a rotor on said shaft within said housing receptacle, said rotor having angularly spaced recesses in the outer portion thereof, vanes carried by said rotor and pivotally mounted, one in each of said recesses, a pair of interiorly-concave, arcuate shoes in said housing receiving the outer portion of said rotor, a pair of fluid outlet pipes disposed at opposite sides of said rotor, each pivotally connecting an end of a respective arcuate shoe to said housing, means operatively connected with said shoes and operated from outside said housing for moving said shoes toward and away from said rotor, means providing fluid inlet and outlet passages for the spaces between said shoes and said rotor, and means providing a seal between each side of said rotor and said shoes.

2,473,922
BREATHING INDICATOR
Cornelius A. Tobias, Berkeley, Calif.
Application October 29, 1945, Serial No. 625,148
8 Claims. (Cl. 177—311)

1. A breathing indicator comprising, in combination, a device which responds by displacement to the rhythmic breathing of a gas; means for coupling said device to a gas mask; a circuit connected to a source of power; signaling means operated by voltage from said circuit; and means including a timing condenser controlled by displacement of said device and in turn controlling the signaling means; the signaling means being actuable to give a signal indicating danger when the breathing ceases or becomes highly irregular.

2,473,923
ELECTROLYTIC POLISHING PROCESS
Dennis R. Turner, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 13, 1945, Serial No. 572,589
2 Claims. (Cl. 204—140)

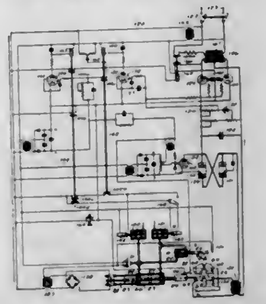
1. In the method of polishing a member whose surface is composed of silver, the steps comprising immersing the member in an aqueous alkaline cyanide solution consisting of from 2 to 50 grams per liter of alkali cyanide and from 5 to 100 grams per liter of another readily ionizable alka-

line compound to provide for good electrical conductivity, passing an alternating electrical current of a frequency of between 0.1 cycle and 0.6 cycle per second at a current density of not less than 100 amperes per square foot at 0.1 cycle per second, the current density for other frequencies between these limits being maintained in the area A in the figure of the drawing, the flow of current being applied for about 30 seconds, and withdrawing the member from the solution when the current cycle renders it anodic for frequencies between 0.1 and 0.2 cycle per second.

2,473,924
SYNTHETIC LINEAR POLYAMIDES AND PROCESS FOR RETARDING CRYSTALLIZATION OF SAID POLYAMIDES
Isaac F. Walker, Hockessin, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 19, 1946, Serial No. 684,765
7 Claims. (Cl. 260—78)

1. A process for obtaining synthetic linear polyamides in which the normally occurring crystallization is retarded, said process comprising blending the molten polyamide with from 0.5% to 10% of its weight of a sulfonated compound of the formula $RCOXR'SO_3M$, wherein R is an open chain monovalent hydrocarbon radical having from 11 to 19 carbon atoms, R' is a divalent saturated aliphatic hydrocarbon radical having from 1 to 6 carbon atoms, M is a metal selected from the group consisting of sodium and potassium, and X is an element selected from the group consisting of oxygen and tertiary nitrogen said nitrogen having a substituent selected from the group consisting of methyl and ethyl groups, said polyamide having an intrinsic viscosity of at least 0.4, recurring amide groups as an integral part of the main polymer chain, and an average number of carbon atoms of at least two in the segments of the chain separating the amide groups.

2,473,925
LAMP HOLDER FOR DOUBLE-ENDED DISCHARGE LAMPS
Benjamin C. Webster, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a corporation of Connecticut
Application March 15, 1945, Serial No. 582,858
5 Claims. (Cl. 173—328)



1. A lamp holder for use with double-ended discharge lamps having a plurality of contact pins at each end comprising, a housing having a slot in one end thereof to receive the contact pins of the lamp, a plurality of contact fingers mounted therein in cooperative relation with the slot, an L-shaped lever member rotatably mounted upon the back face of the housing for movement in a plane substantially parallel to said back face of the housing to and from a locking position, said housing having stop means disposed to stop said lever member in its locking position, said lever member having a bent-over end portion extending over the slotted end of the housing, and spring means normally biasing said lever member to its locking position.

2,473,926
DEVICE FOR SOFTENING BEARDS
Homer C. Wesley, Sr., Louisville, Ky.
Application April 23, 1948, Serial No. 22,911
1 Claim. (Cl. 128—380)

A metallic facial mask for softening the beard of a wearer comprising an upper section having a configuration conforming to the chin and cheeks of the wearer, a lower section having a configuration conforming to the front and sides of the neck of the wearer and joined integral with the upper section along a line to define a parabolic curve in conjunction with the latter, the upper edge of the upper section extending beneath the nose of the wearer, a moisture-absorbing pad positioned within the upper and lower sections of said mask, and a pair of projecting handles disposed in spaced parallel relation and secured to the exterior of said upper section.

2,473,927
APPARATUS FOR AND METHOD OF PERCUSSIVE WELDING
Alfred B. White, Murrysville, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 7, 1946, Serial No. 667,761
16 Claims. (Cl. 219—4)

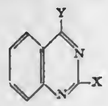
1. A method of welding which comprises, prepositioning a pair of metallic members with surfaces in contact, passing an electrical discharge from a condenser therebetween sufficient to produce a fluid condition of the members at the contacting surfaces, and applying a relatively sharp blow to at least one of the members such

as to force said one member against the other member and force the contacting surfaces together between the peak and the end of the first half cycle of the condenser discharge.

2,473,926
ARC WELDING SYSTEM
Alfred B. White, Murrysville, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 30, 1946, Serial No. 713,237
6 Claims. (Cl. 315—276)

1. In an alternating-current arc-welding system, a welding transformer having a primary winding for connection to a 60-cycle source of electrical energy and a secondary winding for connection to an arc-welding circuit, a reactance device connected in series circuit relation with the secondary winding and the arc, and a capacitor of from 75 to 250 microfarads connected in shunt circuit relation with the secondary winding intermediate the reactance device and the source for maintaining a substantially continuous arc with an open circuit secondary voltage on the order of 55 to 65 volts.

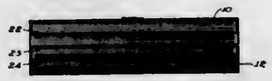
2,473,929
POLYMERIZATION PROCESS
Wilfred K. Wilson, Springfield, Mass., assignor to Shawinigan Resins Corporation, Springfield, Mass., a corporation of Massachusetts
No Drawing. Application February 18, 1946, Serial No. 648,574
11 Claims. (Cl. 260—89.1)



1. In a batch process for polymerizing a polymerizable compound having a $CH_2{=}C<$ group in an aqueous emulsion containing, as a catalyst, 0.01–0.2 part of hydrogen peroxide and such an amount of a water-soluble iron salt as to contain 0.0002–0.004 part of combined iron for every 100 parts of water, the steps which comprise adding all of the iron salt, but only a portion of the hydrogen peroxide initially and adding the remainder of the hydrogen peroxide after a substantial proportion of the polymerizable compound has been polymerized, 10–70 parts of the polymerizable compound being polymerized for every 90–30 parts of water.

2,473,930
PROCESS FOR BLEACHING GLYCERIDIC ESTERS
Eric R. Woodward, New York, N. Y., assignor to Mathieson Chemical Corporation, a corporation of Virginia
No Drawing. Application August 30, 1947, Serial No. 771,561
7 Claims. (Cl. 260—423)

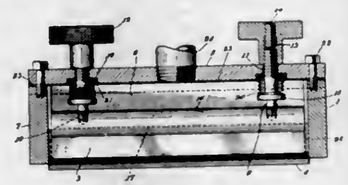
1. A process for improving the color of glyceridic esters of long chain fatty acids containing minor proportions of free fatty acids which comprises intimately dispersing a dry mixture of chlorine dioxide and an inert gas through the fatty material while the latter is at a temperature at which it is fluid, is substantially dry and free from mineral acidity, the fatty acid content of the fatty material not exceeding 10% by weight.



2,473,931
2- AND 4-SULFANILAMIDO QUINAZOLINE
Frank J. Wolf, Westfield, N. J., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application November 9, 1945, Serial No. 627,785
3 Claims. (Cl. 260—239.6)

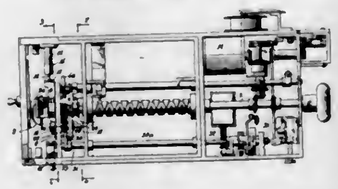
1. A therapeutically useful quinazoline derivative having the generic formula:

where X and Y are radicals different from each other, both being selected from the group which consists of hydrogen and sulfanilamido.



2,473,932
PACKAGE FOR DISPENSING INTERFOLDED SHEETS
Gaylord E. Wolf, Pittsburgh, Pa.
Application April 30, 1947, Serial No. 744,993
4 Claims. (Cl. 206—57)

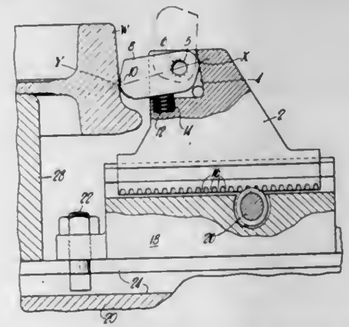
1. A package for dispensing interfolded sheets, comprising a wrapper that is openable at its front end for removal of the sheets therefrom, a plurality of interconnected sheets therein arranged in packet form, each sheet being folded upon itself in the other end of the wrapper and having its extremities positioned adjacent to the first-named end of the wrapper, each sheet having one of its ends folded back to form a narrow flap that has severable connection with the adjacent end of the preceding sheet, whereby upon withdrawal of the last-named sheet from the wrapper, the flap of the next succeeding sheet will be drawn outwardly at the front end of the wrapper, and a dividing strip extending crosswise in the wrapper and secured to the wrapper, the strip extending between sheets adjacent to the mid plane of the package and serving to loosely retain a second group of sheets against accidental withdrawal from the wrapper.



2,473,933
SPRAYER NOZZLE
Joseph Zielinski, Brooklyn, N. Y.
Application December 19, 1946, Serial No. 717,157
4 Claims. (Cl. 299—136)

3. A nozzle comprising a hollow body having a converging top and bottom, ends secured thereto, and a rear member attached to the top and bottom and ends, the top and bottom converging and being separated along one edge to present a narrow elongated opening, a valve element having a tapered edge in said opening of substantially the same length as said opening, a bar to which the valve element is affixed, said bar having rounded sides presented to the converging top and bottom and converging towards said valve element, means comprising a rod rotatably attached to the bar and projecting through the rear member to the outside of the body, a collar on said rod in the body, a spring between the collar and the rear member,

the outer end of said rod being threaded, a knob screwed upon said threaded end and a screw plug in the knob for releasably securing the knob to the rod.



2,473,934
SEWING-MACHINE FEED
Solomon Adler, Kew Gardens, N. Y.
Application August 30, 1946, Serial No. 693,916
5 Claims. (Cl. 112—210)

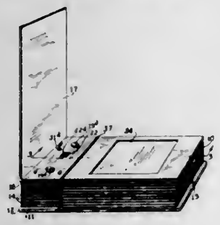
1. In a sewing machine in combination a base provided with a deck, a main drive shaft supported within said base and below said deck, a gear connected to rotate with said drive shaft, a further shaft, a second gear secured to rotate with said further shaft, a shiftable carrier plate fulcrumed on said further shaft, a pair of intermeshing gears supported by said plate and disposed—according to the position to which said plate is shifted and under continued rotation of the drive shaft gear in one direction—to connect the drive shaft gear, through the gears of the carrier plate, to rotate the second gear in clockwise and counter-clockwise directions and to prevent the main drive gear from driving the second gear, a manually shiftable means accessibly disposed with respect to said base and deck and connected to said plate to shift the same, a feed dog slidably mounted for reciprocation with respect to said base and means carried by said further shaft and connected with said dog to cause reciprocation of the same as said further shaft is rotated.

2,473,935
INDEPENDENT LEVERAGE CHUCK
William A. Ashton, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application May 18, 1948, Serial No. 27,673
2 Claims. (Cl. 279—123)

1. A chuck comprising a chuck body having a recess therein, a chuck jaw pivotally mounted in said recess, the rear end of said jaw bearing against the rear surface of said recess at a point between the pivot and the open end of said recess, and a serrated contact face on the front end of

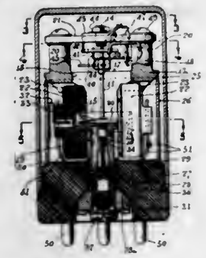
said jaw at a point diametrically opposite the jaw bearing point.

2,473,936
INTERNAL-COMBUSTION ENGINE
Joe Burrough, San Francisco, Calif.
Application October 18, 1947, Serial No. 780,604
7 Claims. (Cl. 123—51)



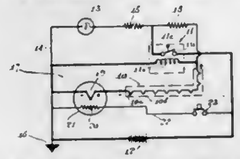
4. In an internal combustion engine of the character described, the combination of an elongated piston accommodating cylinder having air intake and outlet ports at each of its ends, a piston in each end of said cylinder disposed to operate in opposition to each other and form a combustion chamber between their adjacent ends, an intake manifold having ports communicating with the interior of said cylinder and adapted to be uncovered by one of said pistons when in its outermost position, an exhaust manifold also having ports communicating with the interior of said cylinder and adapted to be uncovered by the other of said pistons when in its outermost position, a wave-like cam way extending around the outside of each of said pistons, fixed cam way engaging means carried by said cylinder and adapted to engage the wave-like cam ways of each of said pistons, whereby said pistons will be caused to turn about their axis as they reciprocate within said cylinder, a centrally disposed shaft journaled in each end of said cylinder upon which said pistons are slidably connected, and valve member carried by each of said shafts adapted to control the admission of air to the outer ends of said cylinder and its discharge to said air intake manifold as said pistons reciprocate.

2,473,937
SAFETY AUTOMOBILE DOOR LOCK HANDLE
Edward H. Cameron, Seattle, Wash.
Application May 20, 1947, Serial No. 749,203
2 Claims. (Cl. 292—348)



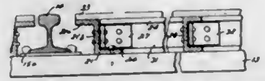
2. A removable handle for use on the operating shank of the door latch mechanism of an automobile door, consisting of: a bushing adapted to be fixedly secured to the operating shank of a door latch; an annular, outwardly extending, handle positioning shoulder formed as part of said bushing; a transverse slot in said bushing cut to a depth greater than the radius of the bushing; a longitudinal cut extending from the end of said bushing and joining with said transverse slot to form two lugs; an operating handle bored to seat on the lug bearing end of said bushing and to abut said positioning shoulder; a key member extending into the bore of said operating handle adapted to pass through said longitudinal cut and operatively engage said transverse slot; and resilient means disposed between the bottom of said bore and the lug bearing end of said bushing.

2,473,938
COMBINED PHOTOGRAPH ALBUM AND MUSIC BOX
Anthony H. Cannizzaro and Pauline F. Cannizzaro, New York, N. Y.
Application May 12, 1947, Serial No. 747,390
12 Claims. (Cl. 84—95)



1. A book album having a cover and a series of leaves connected to the cover by binding screws and hinged for individual inspection, a self starting spring actuated music box concealed between certain of the leaves and provided with a starting element projecting above the leaves, and a second cover hinged to the leaves and adapted to lie against the starting element to hold said music box inoperative, said last-mentioned cover carrying said music box and said music box fitting in a recess in said leaves between said binding posts and said cover having an inturned hinge flap upon which the music box is mounted.

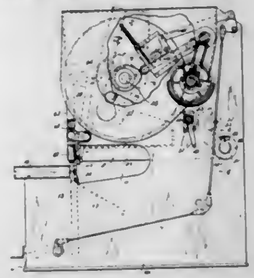
2,473,939
POLARIZED ELECTROMAGNET
Winslow B. M. Clark, West Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application October 22, 1945, Serial No. 623,795
6 Claims. (Cl. 175—339)



1. In an electrical instrument including a pivoted permanent magnet, means for generating a magnetic field to produce a torque influence on said magnet, and a cylindrical magnetic shield surrounding said magnet; means for locating said shield in concentric relation to the pivot axis of said magnet, comprising a seating member having a conical face centered at said pivot axis for locating one end of said shield; a second seating member having an annular shoulder centered at said pivot axis and adapted to fit the interior wall at the other end of said shield and further having an abutment face in a plane at right angles to said pivot axis adapted to bear against said other end of the shield; and means for clamping said seating members, in directions along said pivot axis, against the ends of said shield.

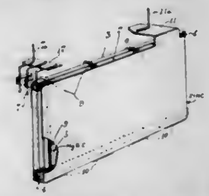
2,473,940
FIRE ALARM SYSTEM
Winslow B. M. Clark, West Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application November 20, 1945, Serial No. 629,849
4 Claims. (Cl. 177—311)

4. In a fire alarm system including a thermopile, a relay including a coil and a pair of contacts, and an alarm circuit including said contacts, an alarm device and a source of potential, said source having connection to ground: the combination of a control circuit serially including said coil and thermopile, one end of said coil being connected to ground; circuit means connected between the end of said coil opposite to ground and said alarm circuit for supplying supplementary current from said alarm circuit to said coil upon closure of said relay contacts; and means for testing said system for operability, including testing said thermopile for continuity and leakage resistance to ground, comprising a test thermocouple permanently connected in said control circuit between said thermopile and ground, a heater thermally associated with said test thermocouple, and circuit means including a switch for supplying energizing current to said heater from said potential source at will.



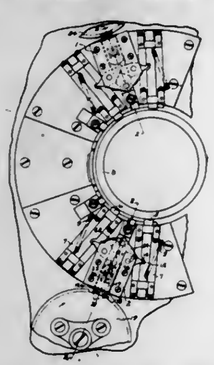
2,473,941
RAILWAY CROSSING
Fred L. Condon, Canisteo, N. Y., assignor to Canisteo Industries, Inc., Canisteo, N. Y., a corporation of New York
Application January 30, 1946, Serial No. 644,321
4 Claims. (Cl. 238—8)

1. In a railway road crossing, a self-contained, metallic road unit comprising supporting frame and surfacing portions, said frame portion having Z-bars at opposite sides thereof adapted to be supported on and secured to the railway cross ties intermediate and parallel with adjacent rails, said Z-bars having their top flanges projecting above the flanges and tie plates of said rails and adjacent to the heads thereof to maintain substantial continuity of road surface and having their bottom flanges extending away from said rail flanges and tie plates and affording substantial weight-bearing areas, and said Z-bars having their upstanding web portions and top flanges located in spaced relation with the flanges and tie plates and heads of said rails, respectively, to maintain an electrical insulating spacing therefrom, sill bars substantially coextensive in height with said Z-bars and connected to and supported by the opposite ends of said Z-bars, respectively, to bridge the space therebetween, a stringer bar supported between said sill bars intermediate said Z-bars, all of said bars having their tops lying substantially in a common top plane of said unit, and said surfacing portion comprising a section of open decking construction supported on and secured to the tops of said bars, said unit being substantially equal in height to said rails and adapted to be installed and removed independently of disturbance of said rails and cross ties.



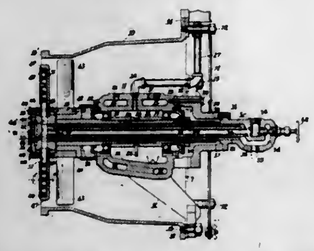
2,473,942
SHEAR PRESS
Roy F. Dehn, Cleveland, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a corporation of Ohio
Application December 22, 1945, Serial No. 636,899
6 Claims. (Cl. 164—43)

1. In a power operated, heavy duty, metal shears of the character referred to, the combination of: a frame comprising horizontally spaced, generally vertical side housings and a bed having a generally horizontal surface, adapted to support material or work to be sheared, connected to said side housings adjacent to the front thereof; said bed being adapted to have a shearing knife detachably connected thereto adjacent to its upper rear edge; a movable ram or blade intermediate said side housings and extending substantially the entire distance therebetween; means including a plurality of shafts mounted in said side housings; said shafts each having an eccentric portion for pivotally supporting said movable ram or blade for movement about an axis generally parallel with the upper rear edge of said bed; said movable ram or blade having its lower front edge adapted to have a shearing knife detachably attached thereto; a plurality of gear-like members, one fixedly connected to each of said shafts intermediate the side housing within which the respective shaft is supported and the adjacent side



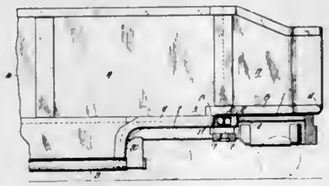
of the ram or blade; a plurality of pinion gears, one in mesh with each of said gear-like members; means for simultaneously rotating said pinion gears for varying the clearance between the shearing knives; and power actuated means pivotally connected to said ram or blade adjacent to the front thereof for oscillating said ram or blade about said axis to cause a cutting edge of the shearing knife carried thereby to move across a cutting edge of the shearing knife carried by said bed.

2,473,943
METHOD OF IMPREGNATING CARBONACEOUS BODIES
Le Roy S. Dunham, East Orange, and Einar V. Steffensen, Belleville, N. J., assignors to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application April 6, 1945, Serial No. 586,950
1 Claim. (Cl. 117—121)



The method of impregnating a coherent carbonaceous body having a porosity of the order of 50% or more, which comprises introducing into said body a brine solution of a mercuric salt composed approximately of 66.7% mercuric chloride, 24.7% water and 8.6% sodium chloride, drying said body, immersing said body in a solution of caustic alkali having a temperature of the order of 60° C. so as to precipitate mercuric oxide within said body throughout the pores thereof, and repeating said process until approximately 1.5 grams of mercuric oxide are deposited within said body per cu. cm. of volume thereof.

2,473,944
SELECTING MECHANISM
Oscar Fregeolle, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a corporation of Massachusetts
Application December 8, 1945, Serial No. 633,654
12 Claims. (Cl. 66—43)



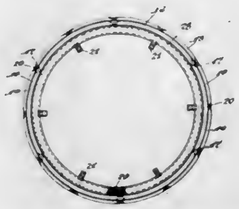
1. In a circular, independent needle, knitting machine having main and auxiliary cam blocks, needles adapted to knit at said auxiliary cam block and a jack under each needle, the combination of a jack cam for raising all of said needles through their associated jacks directly to the maximum level required for knitting at the auxiliary cam block, means for lowering said jacks to a predetermined level without affecting the position of said needles, means for raising preselected ones of the jacks above the others without causing the preselected jacks to engage the needles, means for raising corresponding needles through said preselected jacks to a wrapping level above said previously mentioned level and means for lowering said jacks to the level of the remaining jacks.

2,473,945
ROTARY FUEL BURNER WITH REMOVABLE FUEL-CONDUCTING MEANS
Carl W. Gibson, Worcester, Mass., assignor to Coppus Engineering Corporation, Worcester, Mass., a corporation of Massachusetts
Application July 5, 1946, Serial No. 681,518
7 Claims. (Cl. 158—74)

1. In a burner construction of the class described, a casing forming a passage for combustion-supporting air and being adapted to be connected to a furnace, a stationary support rigidly mounted within said casing, a tubular shaft rotatably mounted within said support and disposed coaxially of said casing, a fluid-distributing means carried upon the furnace end of said shaft, said fluid-distributing means being apertured for the reaction jet discharge of fluid under pressure to produce thereby the rotation of said ahaft, and means carried by said shaft for forcing air axially through said casing toward said furnace; the invention which consists in the provision of a unitary fluid-conducting means removably insertable within that end of said shaft remote from said furnace, said last mentioned means comprising, a normally stationary fluid-supply manifold removably secured upon said support and over that end of said shaft remote from said furnace, said manifold being adapted to be connected to a supply of fluid under pressure, and a normally stationary fluid-conducting tube rigidly carried by said manifold and extending axially into and coextensively of said shaft for conveying said fluid to the vicinity of said fluid-distributing means for introduction thereto, said manifold and said tube being removable as a unit from said casing in a direction away from said furnace.

2,473,946
DOUBLE TRUCK MINE CAR BODY
Karl R. Hammerstrom, Dormont, Pa., assignor to United States Steel Corporation of Delaware, a corporation of Delaware
Application May 12, 1945, Serial No. 593,407
7 Claims. (Cl. 105—414)

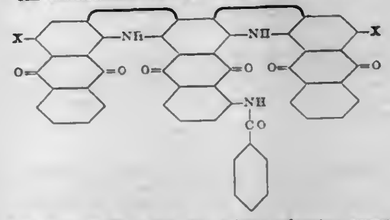
3. A truck mine car body having a box section body bolster with its webs formed by arranging the mutually adjacent end portions of the body's end and intermediate floor plates in overlapped and vertically offset relation with the end floor plate over the intermediate floor plate, and with its flanges formed by flanges joining said floor plates with each other, said bolster internally having longitudinal stiffeners extending from one of its side bearing portions to the other one thereof in the form of plates extending longitudinally of said section and joined flatly to the insides of its webs and a vertical plate running along its center line and joined with the bottom face of the upper one of said plates, along with vertical transverse plates in line with the side bearing portions and joined with the upper one of said plates.



2,473,947
LEG SUPPORT DEVICE
Walter P. Hamstrom, Seattle, Wash.
Application September 13, 1947, Serial No. 773,913
3 Claims. (Cl. 155—165)

1. A leg-supporting device for use by automobile drivers, consisting of: a transversely curved leg rest pad; a telescopic support for said pad having a pivoted tube and a supporting shaft slidable within said pivoted tube; buffer means disposed between said leg rest pad and said supporting shaft; friction locking means adapted to secure said telescopic support in adjustable height position; a bracket adapted to be secured to the floor of an automobile and to pivotably

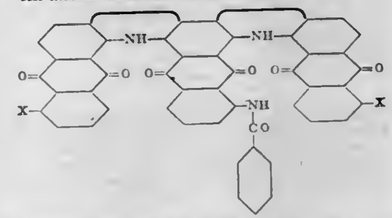
support said telescopic support; said bracket having a U-shaped wall adapted to guide said telescopic support and restrict it to movement in one plane; a plurality of aligned holes through said U-shaped wall disposed to receive limit stop pins adapted to limit the extent of movement of said telescopic support.



2,473,948
SPEED CONTROLLED CENTRIFUGAL VALVE
William H. Harstick, Oak Park, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application June 24, 1946, Serial No. 678,865
8 Claims. (Cl. 137—140)

1. A centrifugally operable valve member comprising a continuous annular rubber sealing element adapted to be supported adjacent to and inwardly from a continuous annular discharge opening, and a metallic resilient member embedded within said sealing element, said resilient member extending substantially throughout said sealing element, and means arranged and constructed for supporting and rotating said sealing element whereby said sealing element is expandable by centrifugal force to seal the discharge opening upon a predetermined speed of rotation of the valve member.

2,473,949
ANTHRIMIDE-CARBAZOLE DYESTUFFS
Hermann Hauser, Binningen, and Max Bommer, Riehen, Switzerland, assignors to the Swiss firm of Ciba Limited
No Drawing. Original application April 20, 1943, Serial No. 483,804. Divided and this application September 17, 1948, Serial No. 49,846. In Switzerland April 18, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires April 18, 1962
1 Claim. (Cl. 260—316)

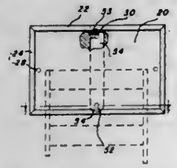


An anthrimide-carbazole of the formula

wherein one X stands for a benzoylamino group and the other X for hydrogen.

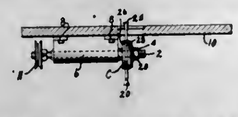
2,473,950
ANTHRIMIDE-CARBAZOLE DYESTUFFS
Hermann Hauser, Binningen, and Max Bommer, Riehen, Switzerland, assignors to the Swiss firm of Ciba Limited
No Drawing. Original application April 20, 1943, Serial No. 483,804. Divided and this application September 17, 1948, Serial No. 49,847. In Switzerland April 18, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires April 18, 1962
1 Claim. (Cl. 260—316)

An anthrimide-carbazole of the formula



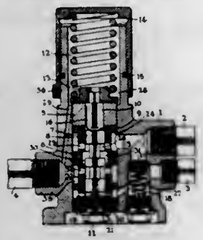
wherein one X stands for a benzoylamino group and the other X for hydrogen.

2,473,951
STEPLADDER TRAY OR SHELF
Marvin M. Hickey, South Bend, Ind.
Application July 3, 1945, Serial No. 603,042
1 Claim. (Cl. 248—238)



A tray for attachment to a step of a step ladder comprising a rectangular bottom, a continuous flange about said bottom to form a tray, said bottom being adapted to rest upon the upper surface of the step substantially lengthwise of the same, said bottom having a pair of spaced openings transversely spaced in a plane medial of said bottom and perpendicular to the longitudinal axis of said bottom portion, each of said openings being adjacent said flange, bolt means through said openings, a clamping bar being adapted to en-

gage the lower surface of the step and to receive one of said bolts whereby said bar is pivotally mounted on said one bolt for swinging said bar relative to the other of said bolts, said clamping

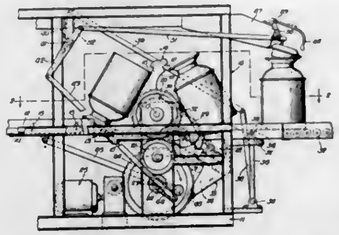


bar having a slot therein, spaced from said first bolt which is adapted to receive the other of said bolts, and clamping nuts on said bolts whereby said clamping bar and tray may be clamped to the step.

2,473,952
AXIALLY EXPANSIBLE ROTARY CUTTER
Daniel G. Horr, Spokane, Wash.
Application May 12, 1947, Serial No. 747,445
1 Claim. (Cl. 144—218)

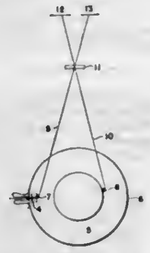
In a cutter head, the combination with a pair of rotary knives having transverse flange bits and circular center portions bored for mounting upon a shaft, of means on the adjoining faces of said center portions including concentric, connected cam ribs on one knife and the other knife having concentric, connected cam grooves to receive the ribs, whereby the distance between the knives may be varied from zero to maximum by rotation of one knife relative to the other the ribs and grooves providing an annular continuous contact between said knives.

2,473,953
RELIEF VALVE FOR HYDRAULIC SYSTEMS
Howard E. Huber and Matthew W. Huber, Watertown, N. Y., assignors to The New York Air Brake Company, a corporation of New Jersey
Application August 13, 1947, Serial No. 768,344
5 Claims. (Cl. 137—153)



1. An unloading valve mechanism, comprising a body having a first connection for a pressure-pump discharge, a second connection for a device to which said pump normally supplies liquid under pressure, a discharge passage, and a cylindrical valve seat with ports leading respectively from the first connection and to the discharge passage; a check valve permitting one way flow from the first to the second connection; a combined piston and valve mounted in said cylindrical seat, and having a normal position in which it obstructs flow between said ports and a venting position in which it connects the same; means affording a restricted communication through which pressure in the first connection reacts on said combined piston and valve to urge it toward normal position, and a communication through which pressure in the second connection exerts an opposing force reaction, the parts being so proportioned that the valve remains in normal position when subject to the opposing forces so developed; and means responsive to excess pressure in the first connection to dissipate pressure beyond said restricted communication, whereby the combined piston and valve is caused to move to venting position.

2,473,954
TREATMENT OF ALKALI CELLULOSE
Guillaume M. A. Kayser, Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware
No Drawing. Application November 18, 1946, Serial No. 710,411. In Germany November 11, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires November 11, 1962
3 Claims. (Cl. 260—233)



1. A process for delaying the aging of alkali cellulose which comprises aging alkali cellulose in the presence of about 0.08% of sodium trithiocarbonate, based on the weight of the alkali cellulose.

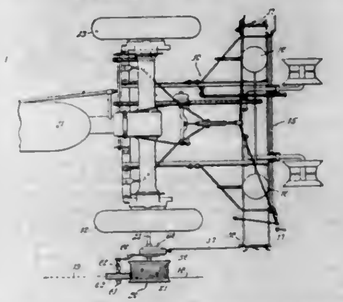
2,473,955
RECEPTACLE HANDLING APPARATUS
Ira H. Kendall, Potsdam, N. Y., assignor to Cherry-Burrell Corporation, Wilmington, Del., a corporation
Application August 14, 1943, Serial No. 498,709
7 Claims. (Cl. 214—1)

3. An object inverter comprising, in combination, a rotatable object inverting cradle having a plurality of object holding means, means for rotating said cradle through a cycle of loading and unloading stations, a rotatable discharge cradle, means for rotating said discharge cradle in synchronism with said inverting cradle, said discharge cradle having a plurality of object receiving means for receiving and discharging inverted objects from said inverting cradle, said rotatable object inverting cradle and said rotatable discharge cradle each being rotatable through arcs of 360 degrees.

2,473,956
STEREOSCOPIC X-RAY PICTURES WITH BETATRON
Donald W. Kerst, Urbana, Ill., assignor to the United States of America as represented by the Secretary of the Navy
Application May 29, 1946, Serial No. 672,982
6 Claims. (Cl. 250—65)

1. In a magnetic induction accelerator for charged particles having an acceleration chamber, means for injecting two beams of particles into said chamber, and means including targets spaced substantially on a diameter operable to intercept said beams, one of the targets being on the inner wall of the chamber and one being on the outer wall of the chamber.

2,473,957
HAIR CURLING DEVICE
Etta E. King and Domenic P. Tata, Leominster, Mass.
Application December 29, 1947, Serial No. 794,234
6 Claims. (Cl. 132—41)

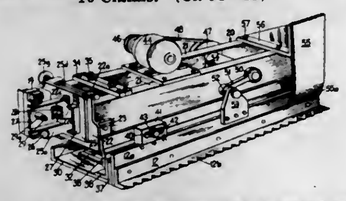


6. A hair curling device comprising an elongated body having a slot at one end to receive a strand of hair close to the scalp, a rotatable member at the other end of the body, an open groove in the member, said groove being closed by association with the body, a pin on the groove, and a hold-down finger having a bifurcated portion receiving the member, the pin connecting the legs forming the bifurcated portion, and a pair of oppositely extending lips on opposite sides of the member, said lips together being wider than the distance between the bifurcation legs and forming a snap holding device therefor.

2,473,958
BLACK GLASS AND METHOD OF MAKING
Norbert J. Kreidl, Rochester, N. Y., assignor to Monsanto Chemical Company, a corperation of Delaware
No Drawing. Application April 5, 1943, Serial No. 481,881
8 Claims. (Cl. 106—52)

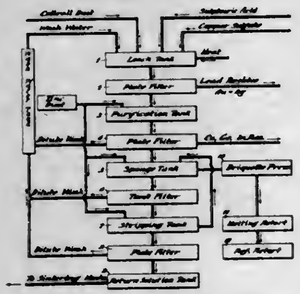
1. A glass containing about 0.05% to about 1% by weight of colloidally dispersed iron phosphides which impart a black color thereto, said phosphides of iron containing between 15% and 25% of phosphorus.

2,473,959
REEL DRIVE FOR PLANTERS
George M. Kriegbaum and Clarence C. Haas, Richmond, Ind., assignors to International Harvester Company, a corporation of New Jersey
Application August 21, 1944, Serial No. 550,406
3 Claims. (Cl. 111—44)



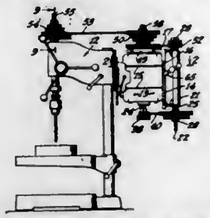
3. For use with a tractor having a transverse rear axle and rear drive wheels, a planter having a transverse frame extending laterally outwardly beyond said drive wheels, a transverse shaft detachably secured at one end to one of said drive wheels for coaxial rotation therewith, a check-wire reel freely rotatable on said shaft adjacent its outer end, a gear housing journaled on said shaft in substantially longitudinal alinement with the end of said planter frame, gearing on said shaft, step-up gearing in said housing meshing with the gearing on said shaft, pinion means on said shaft drivingly connecting said step-up gearing and said reel, means for optionally disabling the driving connection between said gearing and said reel, and means connecting said gear housing with said planter frame to prevent rocking movement of said housing.

2,473,960
SILICATE-TITANATE PHOSPHORS
Ferdinand Anne Kröger, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
No Drawing. Application January 14, 1946, Serial No. 641,182. In the Netherlands November 16, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires November 16, 1962
9 Claims. (Cl. 252—301.6)



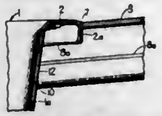
1. A crystalline luminescent material consisting of titanium activated silicates in the form of silicate-titanates and consisting of the fired reaction product of silicon dioxide, titanium dioxide and an oxide of metal of the group consisting of calcium, strontium, cadmium, sodium, and lithium, the constituent oxides of said silicate-titanates being in the ratios in gram molecules $x:(y+z)$ between about 2:1 to about 1:5 and $z:y$ between about 1.5:1 to about 1:100 wherein x represents the said metal oxide component, y represents the silicon dioxide component and z represents the titanium dioxide component.

2,473,961
MACHINE OR APPARATUS FOR SURFACING ROADS
Obert G. Mandt and Arnold S. Millikin, Columbus, Ohio, assignors to The Jaeger Machine Company, Columbus, Ohio, a corporation of Ohio
Application November 27, 1944, Serial No. 565,306
10 Claims. (Cl. 94—45)



1. In a road-surfacing machine, a screed unit, said screed unit including a dead screed member extending transversely of the machine, side form plates carried by said screed unit and disposed at the ends of said dead screed member, a compacting and cut-off bar supported on said screed unit at the forward side of said dead screed member within said side form plates for engaging and compacting material into which said screed unit is crowed before the material reaches said dead screed member, said compacting and cut-off bar being supported on the screed unit for reciprocating movement thereof lengthwise of the dead screed member and transversely of the machine whereby to contact material into which the bar is crowded and compact and cut it off at a desired level, said bar being of less length than the space between said side plates so as to permit the reciprocation thereof but traversing substantially the full length of such space in its reciprocations, and means carried by the machine and operatively connected to said bar for reciprocating said bar relative to said dead screed member between said side form plates.

2,473,962
PROCESS FOR RECOVERING CADMIUM
Frank G. McCutcheon, Henryetta, Okla., assignor to The Eagle-Picher Company, a corporation of Ohio
Application December 1, 1944, Serial No. 566,216
2 Claims. (Cl. 75—115)

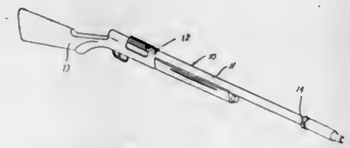


1. In a process for recovering cadmium from a cadmium containing smelter fume, the steps of digesting the fume with dilute aqueous sulphuric acid, adjusting the amount of sulphuric acid in the solution formed to approximately 8 to 12 grams per liter, converting the cadmium sulphide present to a soluble condition by adding thereto cupric sulphate, removing cupric sulphide formed by the reaction of said cupric sulphate with any sulphides present, precipitating the copper and any indium and germanium which may be present with just sufficient zinc to accomplish the precipitation, removing the precipitates, adjusting the acid content of the solution to approximately 12 to 15 grams of sulphuric acid per liter, and then precipitating the cadmium by the addition of zinc.

2,473,963
SPEED SELECTION UNIT
Robert E. McKelvey, Los Angeles, Calif.
Application February 28, 1948, Serial No. 12,099
14 Claims. (Cl. 74—217)

1. A device to be mounted on a motor to enable varying speeds to be obtained from the motor comprising a bracket means adapted to be applied to the motor, a countershaft rotatably supported by the bracket means so as to have its axis parallel to the rotor shaft of the motor, outside splines provided adjacent each end of the countershaft, sheaves slidable over and mountable on the splines, the sheaves adjacent one end of countershaft receiving power from one end of the rotor shaft, the sheaves on the other splined section transmitting power from the countershaft to sheaves rotatable about the other end of the rotor shaft.

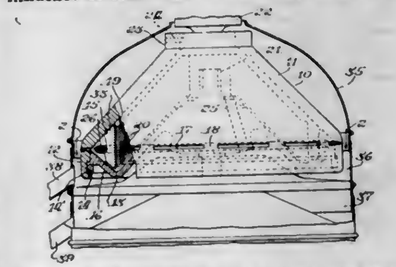
2,473,964
HANDLE FOR COOKING UTENSILS
Walter B. Moore, Coshocton, Ohio, assignor to The Moore Enameling & Manufacturing Company, West Lafayette, Ohio, a corporation of Ohio
Application October 24, 1946, Serial No. 705,435
5 Claims. (Cl. 16—110)



1. In combination, a utensil comprising a hollow body portion made of metal, said body portion having an outwardly projecting reinforcing bead on its edge, a metal handle welded to the body portion, said metal handle having its inner end notched so as to form an attaching edge which fits around and engages the outer part of said bead and laterally spaced substantially horizontal lugs which project beneath the bead and engage the side wall of the body portion, said engaging portions of said handle and body portion being welded together.

2,473,965
SELF-SUPPORTING AERIAL ELECTRIC CONDUCTING CABLE
James J. Morrison and Alfred L. Duna, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application January 8, 1947, Serial No. 720,772
5 Claims. (Cl. 174—70)

1. An article of manufacture of the character herein shown and described comprising a relatively high tensile strength flexible tenuous supporting element, and an externally accessible, substantially co-extensive insulated electrical conductor having respective helical portions of right and left hand lay loosely surrounding said element and respective tie members binding said conductor to said element at the regions where the directions of said lays change.

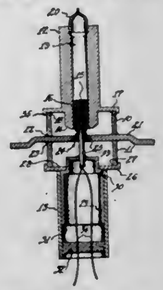


2,473,966
QUICK-CHANGE GUN SIGHT
Wilbert E. Olson, St. Paul, Minn.
Application June 16, 1948, Serial No. 33,279
3 Claims. (Cl. 33—47)

1. A sighting piece adapted to be connected to a gun barrel comprising a grooved bottom face adapted to fit the top of the gun barrel, a transverse slot elevated from the bottom face and extending from one side of the piece to the other, a screw adapted to be fitted into the top of the barrel and having a head adapted to enter the transverse slot and extend from the opposite sides of the piece whereby the screw can be turned from the opposite sides thereof, and said piece having a narrow slot extending from one side of the piece for receiving the screw shank.

2,473,967
SPEED CONTROLLED CENTRIFUGAL VALVE
John R. Orelind, Wilmette, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application May 9, 1947, Serial No. 747,042
6 Claims. (Cl. 137—140)

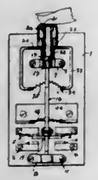
1. A centrifugal valve structure including a rigid ring adapted to be positioned for rotation about its own axis, a radially outwardly extending annular resilient expansible member connected to said ring, said expansible member having an annular resilient web portion connecting it to the ring and a substantially larger annular resilient sealing member connected to the outer periphery of said web portion, said sealing member being adapted to be positioned adjacent to and inwardly from an annular discharge opening, said resilient sealing member being arranged and constructed to expand outwardly under the influence of centrifugal force during rotation of



said ring thereby sealing the annular discharge opening.

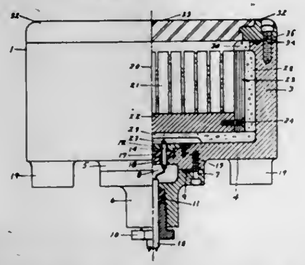
2,473,968
CORNEAL TREPHINE
Richard Townley Paton, New York, N. Y.
Application November 15, 1946, Serial No. 710,081
8 Claims. (Cl. 128—310)

1. A corneal trephine of the kind described comprising in combination a hollow, cylindrical end section having a knife edge, a handle spaced from the hollow end section, an adjustable stop associated with said hollow, cylindrical end section, and means for positioning the stop at different distances from the knife edge.



2,473,969
ULTRA HIGH FREQUENCY ELECTRON DISCHARGE DEVICE
Nicholas E. Prysiak, Florham Park, and Kenneth M. McLaughlin, Summit, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application March 28, 1947, Serial No. 737,890
9 Claims. (Cl. 250—27.5)

1. An ultra-high frequency electron discharge device having an envelope, electrodes of tubular form coaxially disposed in said envelope, and lead structures for said electrodes, two of said lead structures including respectively two opposite ends

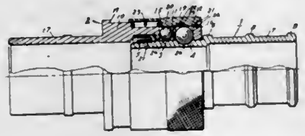


of said envelope and having smooth external surfaces for connection to a concentric line, one of said lead structures being integral with one of said electrodes, another of said lead structures comprising a conducting plate having an aperture therein, said aperture having beveled walls, and another of said electrodes supported in said aperture and engaging said beveled walls.

2,473,970
SNAP ACTING DEVICE AND ELECTRIC SWITCH
Arthur L. Riche, Freeport, Ill., assignor to First Industrial Corporation, Wilmington, Del., a corporation of Delaware
Application August 29, 1946, Serial No. 693,738
9 Claims. (Cl. 200—76)

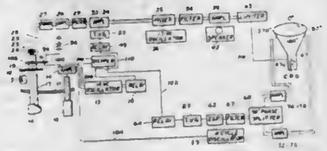
1. In a snap acting device, a unitary member movable between preselected positions defined by stops, a plurality of over-center snap spring mechanisms comprising transversely deflectable compression elements operative on said movable member for driving the same between said preselected positions, one of said compression elements being movable by said member through a position of unstable equilibrium to hold said member in one of said preselected positions, a second of said compression elements having a lost motion engagement with said member, and means to move said second compression element an initial amount independently of said member through an axis of maximum stress to move said member to one of said preselected positions by hammer blow snap action.

2,473,971
UNDERWATER TRANSDUCER
Donald E. Ross, Ocean Beach, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Application February 25, 1944, Serial No. 523,887
1 Claim. (Cl. 181—.5)



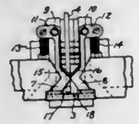
A transducer for propagating sound in fluid, said transducer comprising a housing having a recess open at one end, a metal frame closing said recess, said frame having an opening, nonmetallic material closing said opening thereby forming a sound transparent window, said nonmetallic material having an acoustic impedance substantially equal to the fluid in which the sound is to be propagated from the transducer, means securing said frame to said housing to form a fluid-tight enclosure therefor whereby said transducer can be immersed in the fluid, a unitary motor assembly within the housing facing the window, said motor assembly including a back plate on the opposite side from the window and end support members secured to the back plate, and layers of a cork and rubber mixture having a low acoustic impedance lining said recess and completely surrounding said motor assembly except at the position facing said window, said layers being snugly fitted between the back plate and support members and the housing to form the sole support for said motor unit assembly to position and maintain the same fixed within the housing relative to said window.

2,473,972
METHOD OF PRESERVING ALKYL METAL COMPOUNDS
George F. Ruddies, Chicago, Ill.
No Drawing. Application March 19, 1942, Serial No. 435,297
1 Claim. (Cl. 21—60.5)



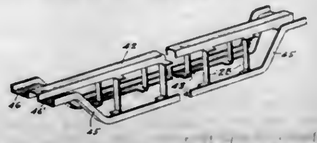
A process of stabilizing tetra-alkyl lead which comprises placing upon the surface thereof a thin relatively inert protective surface film consisting of mono-benzyl-para-aminophenol dissolved in tri-ethanolamine.

2,473,973
COUPLING
Albert T. Scheiwer, Erie, Pa.
Application May 21, 1945, Serial No. 594,932
6 Claims. (Cl. 285—169)



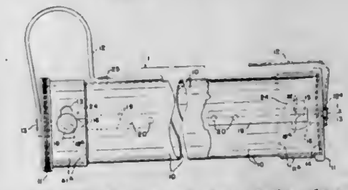
1. A coupling comprising a male member having a connecting portion with a groove, and a female member comprising a sleeve having cam retaining apertures and a groove, camming members carried by apertures in said sleeve for engaging said groove in the connecting portion of said male member to secure said male and female members together, a movable sleeve surrounding said sleeve having a groove, for locking said camming members in engagement with the groove in said male member, and a spring member disposed in the groove in said movable member adapted to engage the groove in said sleeve of said female member to lock said movable sleeve in a position to free said locking camming members and camming members in apertures of said sleeve of said female member adapted to move said spring member out of its engaging groove in said sleeve of said female member when the connecting portion of said male member is inserted into said female member.

2,473,974
UNDERWATER SOUND DETECTING AND INDICATING SYSTEM
Oscar Hugo Schuck, Belmont, Mass., assignor to the United States of America as represented by the Secretary of the Navy
Application May 18, 1944, Serial No. 536,172
12 Claims. (Cl. 177—386)



1. Apparatus for determining the bearing of a target relative to a point in a field comprising omnidirectional transducer means at said point for emitting wave energy into said field for a predetermined period, directionally sensitive transducer means at said point for scanning said field at a rate correlated with the duration period of the emitted energy to pick up an echo of said energy as reflected by said target, a representation of said field, and indicator means for sweeping said representation synchronously with operation of said scanning transducer means and to produce an indication thereon when an echo is received corresponding to the bearing of said target.

2,473,975
GAP CLOSER
Eugene St. Pierre, Pawtucket, R. I., assignor to Hemphill Company, Central Falls, R. I., a corporation of Massachusetts
Application January 17, 1948, Serial No. 2,831
1 Claim. (Cl. 66—112)

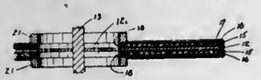


A gap closer for a latch ring of a knitting machine of the circular independent needle type, which includes opposed members operable in gate-like fashion, said opposed members normally being in resilient contact with each other to close the ring gap, said members being mounted for substantially horizontal movements in directions away from each other.

2,473,976
METALLIC STRUCTURAL ELEMENT
John C. Timm, Girard, Ohio
Application January 19, 1944, Serial No. 518,902
1 Claim. (Cl. 189—37)

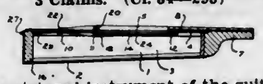
A sheet metal beam element comprising a channel portion having downwardly turned flanges extending from end to end of the beam, a pair of portions, angle shaped in cross-section, said portions being transversely spaced outwardly and on opposite sides of said channel portion, each of said spaced portions comprising in cross-section an outwardly positioned vertical flange and an inwardly directed horizontal flange, the medial portion of each of said inwardly directed flanges being parallel to but spaced from said channel portion, and a plurality of vertical web elements integrally connected to said channel portion and to said medial portions, the terminal ends of said inwardly directed flanges lying in the same plane as the edges of said channel portion and integrally connected thereto, each of said angle shaped portions having a diagonally positioned part at each end of said medial portion connecting said medial portion to the terminal ends of that angle-shaped portion.

2,473,977
ENCLOSING CASE FOR FISHING RODS AND THE LIKE
Gordon N. Tutton, Auburn, N. Y., assignor to Tut, Inc., Auburn, N. Y., a corporation of New York
Application June 7, 1947, Serial No. 753,234
7 Claims. (Cl. 224—5)



1. A portable enclosing case of the class described comprising a rigid tubular body part having cylindrical opposite end portions and open ends, two rigid and detachable end caps closing the open ends of said body part and each having a disk-like head and a cylindrical skirt projecting from said head and telescopically fitting about a different one of said cylindrical end portions of the body part, the skirt of each cap being provided with a bayonet joint slot consisting of an inner portion extending circumferentially of the cap skirt and a narrower entrance portion extending from the edge of the skirt to said inner portion of the slot and joining said inner portion of the slot adjacent one end of said inner portion, each cylindrical end portion of the body part having an aperture therein registering with said inner portion of the slot in the associated end cap, two flat spring bars within the body part each anchored adjacent one end thereof to the body part and having its opposite end free, said spring bars normally lying close to the inner surface of the body part with the free ends thereof opposite different ones of said apertures, and two bayonet joint studs extending through said apertures and each fixedly anchored at inner end to a different one of said spring bars adjacent the free ends of the bars, each stud having a portion which extends outward from its associated spring bar and is engaged in the inner part of the slot in the skirt of the adjacent end cap and is of larger cross section than the width of the entrance portion of said slot, and each stud also having a reduced portion which is normally projected outward beyond the skirt of the adjacent end cap and is of sufficiently small cross section to pass through the entrance portion of the slot.

2,473,978
CENTER DIVIDER FOR TRACTOR-MOUNTED HARVESTERS
Ernest Melville Van Buskirk, East Moline, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application May 25, 1945, Serial No. 595,696
5 Claims. (Cl. 56—119)



5. In a tricycle-type tractor having a narrow longitudinally extending body supported at its front by a narrow dirigible wheel structure mounted on a substantially vertical steering axis and supported at its rear by widely spaced traction wheels, a crop raising and deflecting element hingedly attached to said dirigible wheel structure on a substantially horizontal axis and extending forwardly and downwardly therefrom for closely following the ground and for engaging crops, and crop raising and deflecting element tilting means connected to the tractor spaced from the vertical steering axis and to the crop raising and deflecting element spaced from the horizontal hinging axis, said means comprising a fixed length flexible element disposed lengthwise at each side of the tractor body, said elements having their front ends connected to the deflecting element at points forwardly of the vertical steering axis and above said horizontal axis and their rear ends connected respectively at opposite sides of the tractor at points substantially to the rear of the vertical steering axis, whereby when the steering wheels are angled to one side or the other for steering the tractor and the deflecting element turns therewith, one or the other of said flexible elements depending upon the direction of steering movement is made taut and exerts a pull to raise said deflecting element automatically a substantial distance above the ground and after the tractor turn has been made and again operates on the straight-away permits the deflector to fall and return to normal crop engaging position.

2,473,979
LIQUID FILTER ELEMENT
George M. Walton, Shaker Heights, Ohio, assignor to Air-Maze Corporation, Cleveland, Ohio, a corporation of Delaware
Application March 15, 1945, Serial No. 582,919
3 Claims. (Cl. 210—169)

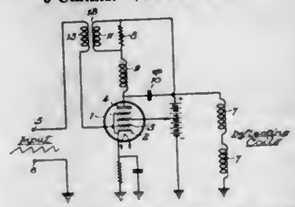
1. A liquid filter element comprising a base member having a central opening and radially extending passageways slotted through said base member and communicating with said central opening thus providing tongues between adjacent passageways, a plurality of said tongues extending uninterruptedly across said opening to provide a bridge, filter material mounted on said base member and surrounding said opening, and there being a hole through said bridge whereby a plurality of said elements may be mounted on a rod passing through said hole.

2,473,980
GUITAR
Hugo Willner, Vancouver, British Columbia, Canada
Application February 16, 1948, Serial No. 8,543
3 Claims. (Cl. 84—295)

1. In a stringed instrument of the guitar type, a truss comprising a transversely disposed strut member extending substantially below the sound board and substantially parallel to the string supporting bridge of the instrument, said sound board having a transverse rib adjacent the neck end of the instrument and a second rib adjacent the opposite end of said instrument, a pair of tensional members extending in spaced relation between said ribs, said strut member being urged by said tensional members to support the sound board and its superposed string supporting bridge.

2,473,981
ILLUMINATED RADIO ANTENNA
Francis G. Wood, East Detroit, Mich.
Application January 21, 1946, Serial No. 642,484
1 Claim. (Cl. 240—8.1)

An illuminated radio antenna for vehicles comprising an elongated upright of translucent material, an antenna conductor mounted within said upright and extending longitudinally therealong, a bracket enclosing a lower portion of said upright, and a light source mounted within said bracket and positioned for projecting light upwardly into said upright, said bracket having a light-transmitting portion therein at the bottom thereof whereby to project light downwardly therefrom.



2,473,982
ELECTROMAGNETIC RELAY
Fredric E. Wood, Oak Park, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application November 23, 1945, Serial No. 630,421
3 Claims. (Cl. 200—1)

1. In a twin contact cantilever spring assembly comprising movable springs and stationary springs of approximately the same overall length, each said spring having a clamping base portion and a free end extending endwise therefrom, means for clamping said base portions of said springs in superposed relation with the free ends of said stationary springs in one plane and with the free ends of said movable springs in a different plane, said clamping means including an L-shaped insulator separating said base portions, an extension on each insulator being approximately one-half that of the overall length of such insulator and extending endwise in only the same plane as the free ends of said stationary springs to reduce the length of the free ends of said stationary springs to that of approximately one-half that of the movable springs, said movable and stationary springs thereby having long and short flexing lengths, respectively, and are confined

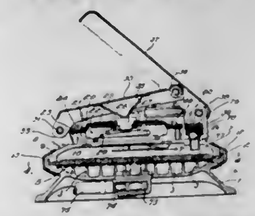
within a space extending endwise from and no wider than said clamping means to reduce the mounting space required for said springs, a pair of diverging branches on each movable spring near the extremity of its free end, a contact on each branch, a pair of S-shaped arms on each stationary spring near the extremity of its free end, each S-shaped arm extending from said one plane into the movable path of and into said different plane of said branches of the free ends of said movable springs, and a contact on each arm cooperating with a contact on a corresponding branch.

2,473,983
DEFLECTION CIRCUIT
Menno Wolf, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application March 24, 1943, Serial No. 480,360
In the Netherlands April 3, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires April 3, 1961
3 Claims. (Cl. 315—27)

1. An electric circuit arrangement comprising a discharge tube having a cathode, a control grid and an anode, means to apply a source of direct current potential to the anode, means to connect the cathode to the negative pole of said source, an inductor and a resistor connected in series with each other and in series with the positive pole of said source and said anode, a coil connected between the anode and cathode, means to apply a saw-tooth voltage between said control grid and cathode, means to derive a potential proportional to the current through said resistor, and means to superimpose in phase opposition said derived potential on the voltage applied to said control grid to produce in said coil a current variation of substantially saw-tooth wave form.

2,473,984
FUMIGANT COMPOSITION AND METHOD
Jack M. Bickerton, New York, N. Y., assignor to Innis, Speiden and Company, New York, N. Y., a corporation of Delaware
No Drawing. Application September 27, 1946, Serial No. 699,631
5 Claims. (Cl. 47—58)

4. The method for fumigating soil which includes depositing below the surface of the soil a mixture of ethylene bromide and naphtha having a flash point above about 80° Fahrenheit and not more than about 10 per cent by volume of a fraction boiling above about 400° Fahrenheit.



2,473,985
ELECTRICAL CONDUCTOR
Lester A. Brooks, Stamford, Vt., assignor to Sprague Specialties Company, North Adams, Mass., a corporation of Massachusetts
Application February 18, 1944, Serial No. 522,884
7 Claims. (Cl. 117—128.4)

1. An electrical conductor insulated with a polymer of at least one monomeric material conforming to the following general formula:

wherein n represents an integer from 1 to 5.

2,473,986
WATER PURIFICATION UNIT
George Martin Booth, Westfield, N. J., assignor to Wallace & Tiernan Co. Inc., Belleville, N. J., a corporation of New York
Application October 18, 1945, Serial No. 623,096
5 Claims. (Cl. 210—185)

1. A water purification unit, comprising a base, a filter support carried thereby substantially concentric therewith and providing a discontinuous supporting surface and a plurality of interconnected channels and adapted to support a removable filter pad, a head having a downwardly turned peripheral flange for engaging the periphery of a filter pad, means engaging the outer peripheral portions of said base and said head to hold all the parts aforesaid in assembled relation, said head including a centrally located diaphragm pump provided with intake and outlet valves, passage means with which said intake

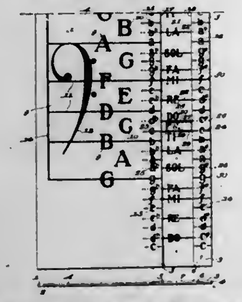
valve is associated to conduct water to be filtered from a source thereof to said diaphragm pump, passage means with which said outlet valve is associated for conducting water from said diaphragm pump to the space between said head and said filter pad, passage means for effluent from said unit, passage means connecting said channels to said passage means for the effluent, and compound lever actuating means for said diaphragm pump, said compound lever actuating means comprising two levers, one of which is pivoted on a substantially horizontal axis on one side of the center of the unit and has a portion arranged for contact with a central reinforced portion of said diaphragm, and the other of said levers is arranged for movement about a substantially horizontal axis on the diametrically opposite side of said unit and engageable with a portion of the first named lever remote from its pivotal axis and to be manually operated, both said levers being so constructed and arranged that manual force applied to the second named lever in substantially a vertical downward direction centrally of said pump will be multiplied by said levers and applied to the reinforced portion of said diaphragm substantially concentrically of the entire unit.

2,473,987

PROCESS OF COKING HIGH VOLATILE COAL INVOLVING INCORPORATION THEREIN OF A LIMITED AMOUNT OF BLAST FURNACE FLUE DUST

George E. Brandon, East Orange, N. J., assignor to Allied Chemical & Dye Corporation, a corporation of New York

No Drawing. Application October 23, 1945, Serial No. 624,083
2 Claims. (Cl. 202—34)



1. A process of making coke which comprises mixing approximately 80% bituminous coal containing from 27% to 38% volatiles with approximately 15% bituminous coal containing from 14% to 23% volatiles and approximately 5% blast furnace flue dust and subjecting the resultant mixture to high temperature coking.

2,473,988

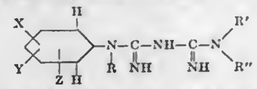
DEVICE FOR TEACHING MUSIC

William H. Coleman, Washington, D. C.

Application October 25, 1946, Serial No. 705,768
8 Claims. (Cl. 84—473)

1. The combination of a chart having a plurality of columns determined by spaced horizontal lines with suitable indicia in said columns indicating notes and a column of key signatures located between said columns first named, and a slide member, means for guiding said slide member, said slide member having an opening for disclosing a key signature.

2,473,989



BIGUANIDE DERIVATIVES

Francis Henry Swinden Curd and Francis Leslie Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application June 19, 1947, Serial No. 755,710
8 Claims. (Cl. 260—565)

1. N^1-p-bromophenyl-N^5-isopropyl-biguanide.

4. A compound selected from the group consisting of the free base form and salts of the biguanides of the general formula:

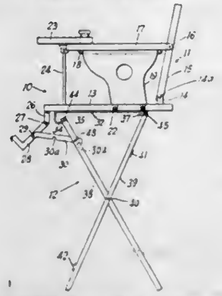
wherein R is a radical from the group consisting of hydrogen and 1 to 3 carbon atom alkyl; R′ is a lower alkyl radical; R″ is a radical from the group consisting of hydrogen and lower alkyl, with the sum of the carbon atoms of radicals R′ plus R″ being between 1 and 8 inclusive; X and Y are radicals from the group consisting of hydrogen, halogen and 1 to 3 carbon atom alkyl, and Z is a radical of a halogen atom of atomic weight greater than chlorine.

2,473,990

MANUFACTURE OF HALOGENATED AROMATIC COMPOUNDS

John L. Darragh, Berkeley, Calif., assignor to California Research Corporation, San Francisco, Calif., a corporation of Delaware

No Drawing. Application October 22, 1945, Serial No. 623,870
18 Claims. (Cl. 260—650)



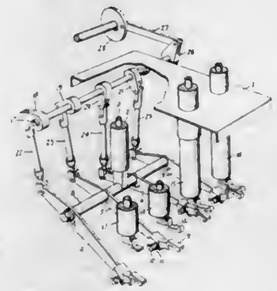
1. The method of chlorinating the benzene nucleus of an aromatic compound of the benzene series that comprises causing said aromatic compound to react in the liquid phase with chlorine in the presence of a magnesium-iron-aluminosilicate catalyst.

2,473,991

BABY HIGH CHAIR

Benjamin Felsher, New York, N. Y.

Application July 21, 1945, Serial No. 606,432
12 Claims. (Cl. 155—127)



1. A collapsible baby chair having the combination of a seat, a back, side arms, and side walls, said back being pivoted to said seat for collapsing to inoperative state, said side arms being pivoted to said back to swing from operative condition to a position in alignment with said back, said side walls being pivoted to said arms to swing from an operative condition to a position against said back when said side arms are in alignment with said back, and means to lock said side walls to said seat when the chair is in operative condition.

2,473,992

ELECTRIC SWITCH

John Fowler, Stockport, England, assignor, by mesne assignments to General Electric Company, a corporation of New York

Application September 6, 1946, Serial No. 695,184
In Great Britain August 1, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires August 1, 1965
1 Claim. (Cl. 200—5)

An electric switch comprising, in combination, an electrical conducting shaft, four spaced parallel electrical conducting arms pivotally mounted on said shaft, a separate movable contact pivotally mounted on an end of each arm, four insulated fixed contacts for cooperation respectively with said movable contacts, separate springs for biasing each movable contact toward its cooperating fixed contact, a crank shaft having four angularly displaced crank arms, said crank shaft being parallel to said conducting shaft, connecting rods respectively interconnecting said crank arms and said electrically conducting arms, a freely rotatable shaft mounted parallel to said crank shaft, a driving member fixed on said freely rotatable shaft and having a given radius, a fifth crank arm attached to said crank shaft and having a longer radius than said driving member, a connecting rod between said driving member and said fifth crank whereby continued rotation of said freely rotatable shaft in either direction will cause oscillatory rotation of said crank shaft through a predetermined angular range which is substantially less than 360 degrees, the angular displacement of said four crank arms relative to each other and to said fifth crank being such that at one end of said angular range of oscillatory rotation two of said movable contacts engage their cooperating fixed contacts with one of said movable contacts turned about its pivotal mounting against the force of its spring further than the other one and with the other two movable contacts separated from their respective fixed contacts, while at the other end of said range said other two movable contacts engage their respective fixed contacts with one of said other two movable contacts turned about its pivotal mounting against the force of its spring further than the other one and with the first two movable contacts separated from their respective fixed contacts, while at the middle of said range the two movable contacts which are respectively turned furthest about their pivotal mountings at the opposite ends of said range each engage their respective fixed contacts and the remaining two movable contacts are out of engagement with their respective fixed contacts, and an electrical terminal for said switch connected to said electrical conducting shaft.

2,473,993

SYNTHESIS OF METAL CARBONYLS

William F. Gresham, Wilmington, and John V. E. Hardy, Bellevue, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application January 16, 1948, Serial No. 2,813
9 Claims. (Cl. 23—203)

2. In a process for the synthesis of metal carbonyls the step which consists in forming a metal carbonyl of the class consisting of nickel carbonyl and cobalt carbonyl by reacting a metal salt of an organic carboxylic acid, said metal being a member of the class consisting of nickel and cobalt, with carbon monoxide and hydrogen at a pressure of 50 to 3000 atmospheres and a temperature of 100° to 375° C. in the presence of an organic solvent for the said metal carbonyl.

2,473,994

1,3-DIOXOLANE POLYMERS

William F. Gresham, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 4, 1945, Serial No. 609,037
8 Claims. (Cl. 260—615)

1. A process for producing polymers having 1,3-dioxolane residues (—$OCH_2OCH_2CH_2$—) and linear formal residues (—OCH_2O—) there being present at least three of the residues, at least two of which are 1,3-dioxolane residues and at least one is a linear formal residue, which consists in subjecting at least two moles of 1,3-dioxolane per mole of a linear formal to polymerization by mixing together in the presence of an acid catalyst.

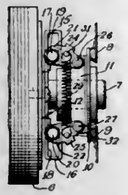
2,473,995

SYNTHESIS OF DIETHYL KETONE

William F. Gresham, Lindamere, Richard E. Brooks, Edgemoor Terrace, and William E. Grigsby, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application June 19, 1946, Serial No. 677,922
5 Claims. (Cl. 260—597)

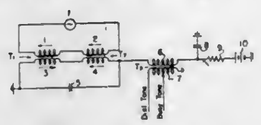
1. A process for the synthesis of diethyl ketone which comprises heating a mixture of ethylene, carbon monoxide, and hydrogen containing initially more than one mol of ethylene per mol of hydrogen and having an initial $CO:H_2$ molal ratio of from about 5:1 to 20:1 at a reaction temperature of about 50° to 350° C. in the presence of a cobalt catalyst under a pressure of 325 to 1500 atmospheres, and thereafter separating diethyl ketone from the resulting reaction product.



2,473,996
POLYMERS FROM ETHYLENE AND BRANCHED CHAIN VINYL ESTERS
William E. Hanford, Easton, Pa., and John R. Roland and Walter E. Mochel, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 6, 1944, Serial No. 543,732
9 Claims. (Cl. 260—87.3)

1. A polymer of ethylene and a vinyl ester of a carboxylic acid, said carboxylic acid having from 5 to 10 carbon atoms per molecule, and being a member of the class consisting of (1) acids in which the carbon atom of the carboxyl group is attached directly to a carbon atom of a monovalent hydrocarbon radical, said carbon atom having at least two of its remaining valences satisfied by carbon atoms, and (2) acids in which the carbon atom of the carboxyl group is attached through a methylene group to a carbon atom of a monovalent hydrocarbon radical, said carbon atom having at least two of its remaining valences satisfied by carbon atoms, said polymer containing from 1 mole per cent ethylene and 99 mole per cent of the said vinyl ester to 99 mole per cent ethylene and 1 mole per cent of the said vinyl ester.

2,473,997
PARTIAL REDUCTION OF POLYCYCLIC AROMATIC HYDROCARBONS
Virgil L. Hansley, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 26, 1947, Serial No. 757,317
10 Claims. (Cl. 260—667)

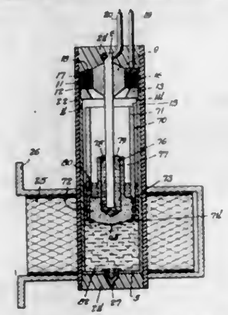


1. A process for the production of 1,4-dihydronaphthalene comprising reacting naphthalene with an alkali metal and a tertiary aliphatic alcohol at a temperature not exceeding 110° C., employing at least 2 atoms of said metal per mole of naphthalene and at least 1 mole of said alcohol per atom of said metal.

2,473,998
CENTRIFUGAL SWITCH
John T. Janette, Kenilworth, Ill., assignor to Janette Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application April 2, 1945, Serial No. 586,168
1 Claim. (Cl. 200—80)

In a device of the character set forth, the combination with a rotatable member and a shaft therefor, of a base plate adapted to be fixed to the rotatable member and having outwardly extending branches with box-like guideways having broad flat engaging surfaces for the weights, cylindrical, weights extending through said guideways, pairs of connected links pivotally connected with the respective weights, an insulating collar slidably mounted on the shaft and pivotally connected with the pairs of links, a contact ring carried by said collar, pins through the respective pairs of links, springs extending between the pins tending to draw the weights inwardly, the arrangement being such that the inner ends of the guideways serve as stops for the weights when drawn inwardly by the springs and the contact ring will be in closed position with the center lines of the links at a small angle to the axis of the shaft and when the weights move outwardly under the influence of centrifugal force, the contact ring will be moved to open position and the base plate will act as a stop for limiting the inward movement of the collar.

2,473,999
STATIC FREQUENCY CHANGER
Roy W. Jones, Rochester, N. Y., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application June 26, 1947, Serial No. 757,163
3 Claims. (Cl. 172—281)

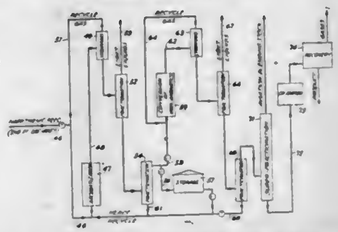


3. In a frequency multiplier, a pair of transformers, a source of alternating current, a source of direct current, an output transformer, a circuit including the alternating current source and the primary windings of said pair of transformers, a second circuit including the secondary windings of said pair of transformers, the primary of said output transformer, and said direct current source, said secondary windings connected in series opposition in said second circuit so that the cores of said pair of transformers are oppositely magnetized by the direct current flowing in said second circuit, a condenser in shunt to the secondary windings of said pair of transformers to time said second circuit to a harmonic of the frequency of the alternating current source, and an output circuit including the secondary winding of said output transformer.

2,474,000
ELECTROMAGNETIC MERCURY RELAY
John P. Keating, Elkhart, Ind., assignor to Durakool, Inc., Elkhart, Ind., a corporation of Indiana
Application April 6, 1946, Serial No. 660,031
10 Claims. (Cl. 200—112)

1. A mercury relay comprising a pair of electrode means insulated from each other with one of said electrode means having contacting engagement with a first body of mercury for said relay, plunger means open at the upper end thereof adapted to be normally supported in floating relation in said first body of mercury for supporting a second body of mercury in insulated relation with respect to said first body of mercury and in contacting engagement with the other of said electrode means, coil means adapted when energized to attract said plunger means to submerge the latter in said first body of mercury and thereby effect engagement thereof with said second body of mercury through the open upper end of said plunger means providing quick making of a circuit between said pair of electrode means, and said plunger means having metering

means between said bodies of mercury through which mercury within said plunger means is returned to said first body of mercury for effecting



a time delay in disengaging of said first body of mercury from said second body of mercury upon de-energization of said coil means and with said plunger means in its normal position.

2,474,001
OXIDATION OF ORGANIC COMPOUNDS
Irving E. Levine, Berkeley, Calif., assignor to California Research Corporation, San Francisco, Calif., a corporation of Delaware
No Drawing. Application May 30, 1945, Serial No. 596,644
13 Claims. (Cl. 260—342)

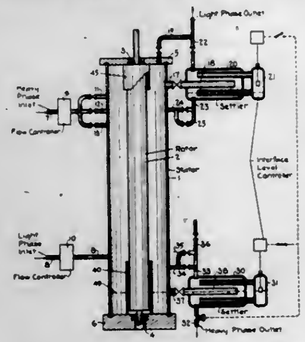
13. A process for the production of partial oxidation products which comprises oxidizing a vaporized hydrocarbon of the benzene series selected from the group consisting of benzene, toluene and xylene with an oxygen-containing gas, said oxygen-containing gas being present in amounts greater than the stoichiometric amounts required to produce said desired partial oxidation products, in the presence of a catalyst comprising vanadium metal with an indigenous coating of avanadium oxide.

2,474,002
PROCESS OF PRODUCING DICARBOXYLIC ACID ANHYDRIDES
Irving E. Levine and William H. Claussen, Berkeley, Calif., assignors to California Research Corporation, San Francisco, Calif., a corporation of Delaware
Application May 30, 1945, Serial No. 596,646
10 Claims. (Cl. 260—342)

1. In a process of producing phthalic anhydride and an improved hydrocarbon stock having enhanced properties as a blending agent in aviation gasolines, the steps which comprise treating an aromatized mixture of petroleum hydrocarbons consisting essentially of an equilibrium mixture of alkyl benzenes boiling within the range of from about 250° to about 300° F. to separate an alkyl benzene fraction boiling within the range of from about 275° to about 285° F. and an alkyl benzene fraction boiling within the range of 285° to about 300° F., said 275°–285° F. fraction of alkyl benzenes being characterized by an aviation gasoline blending action superior to that of said equilibrium mixture of alkyl benzenes and said 285°–300° F. alkyl benzene fraction containing at least about 70% by volume of phthalic anhydride convertible alkyl benzenes, oxidizing said last alkyl benzene fraction to phthalic anhydride and over-oxidizing inconvertible hydrocarbons therein at least to the point of ring rupture by passing said last fraction in vapor phase over a vanadium oxide catalyst at a catalyst temperature of from 800° F. to 1175° F. and separating said phthalic anhydride from said over-oxidized components.

2,474,003
STABILIZED BRIEF CASE
Lewis Lifton, New York, N. Y.
Application December 30, 1948, Serial No. 68,159
2 Claims. (Cl. 150—1.6)

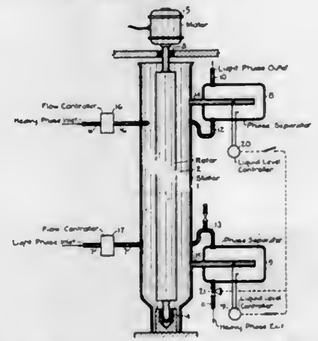
1. In a brief case, spaced panels, a gusset interposed between said panels and secured thereto, upper and lower U-shaped telescoping frames secured to the upper margins of said panels and gusset and embodying upper and lower reaches and including depending side portions having their lower ends pivotally connected, and a one-piece keeper having an upper U-shaped component defining a relatively deep channel facing rearwardly for receiving substantially the entire width of said upper reach and including an oppositely facing depending lower U-shaped component integral with and disposed closely under said upper reach and in part extending rearwardly and appreciably beyond said lower component and having an upper downwardly and rearwardly uninterrupted member common to said upper component and including a downwardly and forwardly sloping lower member diverging away from said upper member and defining therewith a rearwardly contracted forwardly facing channel for removably and in part closely receiving said lower reach on closing of said frames to prevent vertical separation of said lower reach away from said upper reach.



2,474,004
PROCESS FOR THE PREPARATION OF ETHYLENEUREA
Donald J. Loder, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Original application March 1, 1944, Serial No. 524,520. Divided and this application April 15, 1947, Serial No. 741,679
4 Claims. (Cl. 260—309)

1. In a process for the preparation of ethyleneurea from ethylene glycol and urea the steps which comprise discharging, into water and without cooling the reaction product, obtained by heating a reaction mixture containing ethylene glycol and urea, the ethylene glycol being in excess, to a temperature between 150 and 250° C. and under a pressure in excess of 5 atmospheres, heating the resulting mixture to a temperature between 200 and 300° C., and subsequently recovering ethyleneurea therefrom.

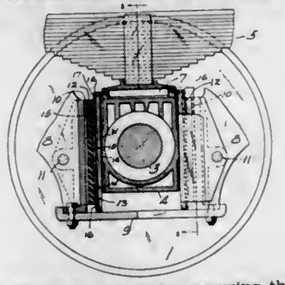
2,474,005
2-ACETOXYBENZYL ACETYLSALICYLATE
Gustav J. Martin and Harold Urist, Philadelphia, Pa., assignors to The National Drug Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application January 14, 1947, Serial No. 722,079
2 Claims. (Cl. 260—474)



1. A process which comprises reacting acetyl saligenin with acetyl salicyloyl chloride in the presence of pyridine, and separating the resulting 2-acetoxybenzyl acetylsalicylate from the reaction mixture.

2,474,006
ROTARY CONTACTOR FOR FLUIDS
Russel L. Maycock, Oakland, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application April 11, 1949, Serial No. 86,841
15 Claims. (Cl. 261—83)

1. In combination, a rotary contactor comprising as elements thereof a housing and a core within said housing, said housing and core being spaced apart to provide an elongated annular contact zone between the inner surface of the housing and the outer surface of the core and being rotatable one with respect to the other, said contactor structure being adapted to disperse one fluid within another by imposing shearing stress on fluids between said surfaces, and a pair of radially spaced walls at one end of the contact zone having opposing surfaces with radii substantially equal to the radii of said housing and core, respectively, at least one of said walls being mounted to permit relative rotation between itself and the contactor element of substantially equal radius, providing an annular stilling space between said walls.

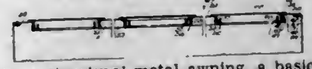


2,474,007
METHOD OF AND APPARATUS FOR CONTACTING FLUIDS
Russel L. Maycock, Oakland, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application June 21, 1945, Serial No. 600,796
21 Claims. (Cl. 261—83)

1. A method of contacting a plurality of fluid substances forming a heterogeneous mixture when in contact, at least one substance being a liquid, comprising the steps of subdividing one of said substances into small particles, thereafter dispersing the resulting particles in another of said substances, effecting contact between the dispersed particles and the said other substance by flowing the dispersed particles through an elongated annular contact zone bounded by surfaces of revolution and formed between a housing and a core within said housing, and maintaining said particles in a subdivided state and dispersed in said other substance while flowing through said contact zone by developing shearing forces in the fluid mixture in said annular contact zone, said shearing forces being developed by providing rapid rotational movement between said housing and core.

2,474,008
RAILWAY TRUCK PEDESTAL LINER
William H. Meyer, St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application August 11, 1944, Serial No. 549,022
15 Claims. (Cl. 105—225)

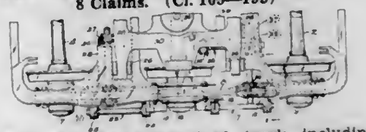
1. A railway vehicle pedestal liner comprising an inner plate arranged for application to the journal box-opposing face of a pedestal leg, a pad of rubber-like material having one side surface bonded to said plate, an outer plate bonded to the other side surface of said pad and having portions extending beyond the upper and lower ends of said pad, a wear plate mounted on said outer plate, said outer plate and wear plate having elements abutting each other transversely of the general plane of the plates to prevent relative movement therebetween and to transfer thrusts between them applied in directions parallel to said plane, and means securing the wear plate to said portions of the outer plate at points spaced from said pad.



2,474,009
OIL FILTER AND PUMP COMBINATION
Cecil Patrick Molyneux, Hampton Bays, N. Y., assignor to Filtors, Incorporated, Long Island City, N. Y., a corporation of New York
Application June 2, 1948, Serial No. 30,649
6 Claims. (Cl. 103—202)

1. In an apparatus for pumping and filtering oil including an oil pump, and an oil filter mounted on the pump, the improvement which comprises an oil pump having a flat cylindrical pumping chamber, a pair of cooperating pumping elements mounted in and substantially fitted in said chamber from end to end, means for driving said elements, oil supply and oil discharge chambers spaced from each other in the end wall of the pumping chamber behind the pumping elements, an oil filter having a mounting plate attached to said pump and constituting the other end wall of the chamber, said plate overlying the pumping elements and serving to enclose them in the pumping chamber, an oil inlet passageway for the filter for conducting oil from the pumping chamber, said passageway extending in said plate and having a port opening through the inside face of the plate into the pumping chamber at a position opposite a portion of the oil discharge chamber of the pump, and an oil outlet passageway for the filter for conducting filtered oil to the pumping chamber, said outlet passageway extending in said plate and having a port opening into the pumping chamber at a position opposite a portion of the oil supply chamber of the pump, said ports being arranged in said plate with respect to the pumping elements in the pumping chamber so that each port is alternately opened and closed during the operation of the pump.

2,474,010
PLASTICIZER
Latimer D. Myers and J. D. Fitzpatrick, Cincinnati, Ohio, assignors to Emery Industries, Inc., Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application July 22, 1946, Serial No. 685,369
13 Claims. (Cl. 260—398)



1. A new composition of matter comprising the mixed ester of an aliphatic dihydric alcohol with a fatty acid and a carboxylic aliphatic nitrile.

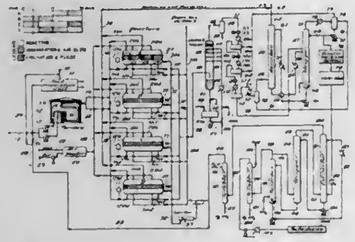
2,474,011
STRUCTURAL METAL AWNING
Lloyd H. Overly, Maryville, Tenn.
Application March 11, 1947, Serial No. 733,874
6 Claims. (Cl. 20—57.5)

4. In a structural metal awning, a basic supporting structure adapted to be mounted on the wall of a building, said structure including spaced up and down rails having gutters depending from at least one longitudinal edge thereof and disposed below the rails in position to catch drippings from the rail edges, and removable panels mounted between and supported by the spaced up and down rails, said panels having depending flanges extending into the gutters when the panels are in position on the structure, and means for supporting said up and down rails.

2,474,012
RAILWAY TRUCK
Harry M. Pflager, St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill., a corporation of Delaware
Application August 30, 1944, Serial No. 551,829
8 Claims. (Cl. 105—195)

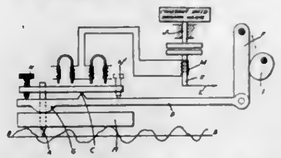
2. In a railway six-wheel truck including wheels, axles and journal boxes, equalizers extending between and supported by adjacent boxes, springs supported by portions of the equalizers spaced longitudinally of the truck from the journal boxes, a truck frame supported by said springs, each equalizer spring-supporting portion having associated therewith anchors extending from said portion longitudinally of the truck and transversely of the truck respectively, parts of said anchors remote from said equalizer portions being connected to the truck frame, the anchors holding the equalizers and truck frame against relative movement transversely and longitudinally of the truck into contact with each other.

2,474,013
TREAD LUG REBUILDING METHOD FOR TIRES
Vaughn Rawls, Lima, Ohio, assignor to Rawls Brothers Company, Lima, Ohio, a partnership composed of Vaughn Rawls and Wesley O. Lones
Application October 21, 1947, Serial No. 781,119
11 Claims. (Cl. 154—14)



1. The method of rebuilding a worn tread lug of a rubber tire, which comprises buffing the lug

to provide it from end to end with a transverse convex curved surface, applying to said surface lengthwise of the lug a bar of rubber-like material having its inner surface substantially the width of said lug surface and transversely curved in concave form with its curve of shorter radius than that of the lug curve, the curved surfaces of the lug and bar being coated with an adhesive material, one of said surfaces having a

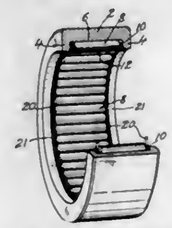


strip of sheet-like non-adhesive material over each side edge portion to provide the adhesive surface with an exposed longitudinally extending central portion, applying inward pressure to the bar to cause adherence of said surfaces between said strips, withdrawing the strips from between said surfaces to permit adherence of the surfaces separated thereby, and subjecting the rebuilt lug to a curing treatment.

2,474,014
CATALYTIC CONVERSION SYSTEM
James E. Seebold, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application January 30, 1943, Serial No. 474,120
9 Claims. (Cl. 260—680)

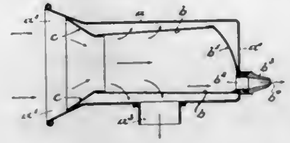
1. In a hydrocarbon conversion process wherein a hydrocarbon charging stock stream is heated to conversion temperature and passed in vapor form through a zone of small cross-sectional area to at least one on-stream reaction zone of large cross-sectional area while at least one other reaction zone is not on-stream, wherein each of the reaction zones contains a large hot mass of particles of catalytically inactive heat retention material with particles of solid catalyst material substantially uniformly distributed therein and said stream is passed through said mass under conditions for effecting endothermic conversion by heat absorbed from said mass and a consequent temperature drop in said mass accompanied by the deposition of a combustible deposit therein, and wherein the catalyst in said mass is regenerated by combustion of said deposit with an air stream and subsequently purged during an interval when the zone is not on-stream, the regeneration liberating heat for absorption in said mass and causing the temperature of the outlet side of said mass to become higher than the temperature of the inlet side thereof and there normally being a change in the temperature patterns in the line of flow through the mass with portions thereof getting hotter and hotter as these operations are repeated from cycle to cycle so that there is a tendency toward the development of at least one hot spot in an intermediate portion of said mass, the improved method of operation which comprises periodically blowing each mass immediately after the regeneration and before the purging thereof, employing in the blowing step a hot blow gas having an inlet temperature of about the desired conversion temperature, introducing the blow gas at the low temperature side of said mass, employing an amount of blow gas such that the product of its weight multiplied by its specific heat is substantially less than the product of the weight multiplied by specific heat of the mass of heat retention material and catalyst in the zone undergoing the blowing step and sufficient to remove the highest portions of temperature patterns in the mass with said blow gas but insufficient to impart a substantially uniform temperature across the bed throughout its entire mass, employing a sufficient number of zones so that conversion, regeneration, blowing and purging may be effected continuously and continuously fractionating products of the conversion.

2,474,015
INSTRUMENT FOR THE MEASUREMENT OF SURFACE FINISHES
Harry Shaw, Healy, Whitworth, Rochdale, England
Application February 14, 1945, Serial No. 577,808
In Great Britain January 22, 1945
4 Claims. (Cl. 73—105)



1. A device for determining the roughness of a surface having peaks and valleys comprising a support adapted to rest upon the peaks of said surface, means for traversing said support over said peaks of said surface, a stylus for engaging said surface carried by said support and movable relative thereto in a direction normal to the plane of movement of the support, means actuated by movement of the stylus relative to the support independently of the extent of such movement, and means for summating the periods of such actuation.

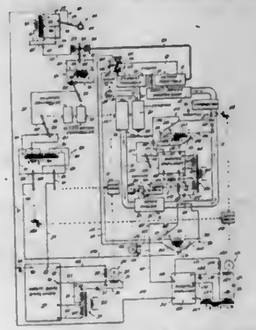
2,474,016
ROLLER BEARING ASSEMBLY
Sydney Smith, Lawrenceville, N. J.
Application May 16, 1945, Serial No. 593,995
2 Claims. (Cl. 308—213)



1. A roller bearing assembly comprising a race ring, radially extending flanges located on opposite sides of said race ring, a complement of rollers engaging said race ring, each of said rollers having a bearing surface and reduced end portions of a cylindrical shape joined to the bearing surface by an arcuate surface terminating in a radial shoulder, and two spring rings of a circular cross section, one of which is positioned adjacent each of the two opposite ends of said rollers, and engaging said reduced end portions and urging the rollers toward the race ring to prevent radial displacement of the rollers, said

spring rings being of less diameter in cross section than the radial distance between the surface

of said cylindrical end portions and said bearing surfaces of the rollers and being located between said radially extending shoulders and said flanges.

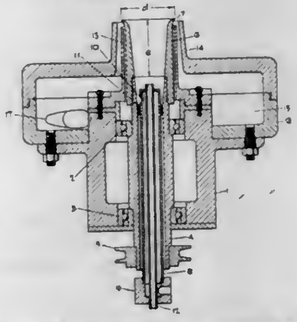


2,474,017
AIR CLEANER FOR CARBURETORS
Ellis Smith and Norris Crabtree, Bradford, Sydney Naylor, Wibsey, Bradford, and Harold James Maw, Guiseley, England
Application March 21, 1946, Serial No. 656,066
In Great Britain July 26, 1945
5 Claims. (Cl. 183—38)

1. A primary air admission device for a motor carburetor comprising in combination a closed casing; an inlet opening in said casing for the air to be admitted to said motor carburetor; a first outlet opening in said casing adapted to be connected to said motor carburetor; a filter member within said casing through which the air is forced to pass on its way from said inlet opening to said first outlet opening; a second outlet opening in said casing leading into the space surrounding said casing; and an unobstructed outlet opening in said filter member through which a portion of the air passing through said casing might reach without obstruction said second outlet opening in said casing, carrying any grit or dirt contained in the air admitted through said inlet opening directly into the space surrounding said casing.

2,474,018
SUPERCHARGER COMPRESSION TEMPERATURE CONTROL SYSTEM
Hubert T. Sparrow, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 28, 1945, Serial No. 590,819
12 Claims. (Cl. 60—13)

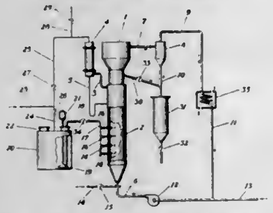
1. In combination, an internal combustion engine having an intake manifold, a compressor for supplying air under pressure to said manifold, a cooler for removing the heat of compression, a throttle for regulating the flow of air from said compressor to said intake manifold, and means responsive to a continuing reduction in the temperature of the air for first reducing the cooling



effect of said cooler and then increasing the throttling action of said throttle.

2,474,019
STABILIZER FOR ICINGS
Arnold B. Steiner, La Jolla, and Lloyd B. Rothe, San Diego, Calif., assignors to Kelco Company, San Diego, Calif., a corporation of Delaware
No Drawing. Application March 10, 1947, Serial No. 733,732
30 Claims. (Cl. 99—139)

1. An additive for bakery icings, comprising: an edible hydrophilic colloid together with a surface active agent selected from the group consisting of the sorbitan esters of the higher fatty acids, the polyoxyethylene derivatives of said esters and of stearic acid, and the sodium sulfoacetates of the mono- and diglycerides of the higher fatty acids.

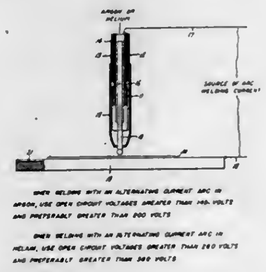


2,474,020
LIQUID FUEL BURNER WITH ROTATABLE ATOMIZING CUP
Hendrik K. J. van den Bussche, Delft, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application June 11, 1947, Serial No. 753,845
In the Netherlands June 25, 1946
4 Claims. (Cl. 158—77)

1. A burner for liquid fuel comprising a rotatable atomizing cup having a continuous highly

polished inner surface widening toward the front, a tubular shaft secured to and extending rearwardly from said cup, means for rotating said shaft and cup at a high velocity, an oil supply pipe within said tubular shaft, closed at its forward end and provided with an orifice near said forward end, and an air supply conduit within said oil supply pipe having its intake in communication with the atmosphere outside of the burner and having its discharge end forwardly of said oil supply pipe and substantially axially with respect to the atomizing cup.

2,474,021
PRODUCTION OF METAL COMPOUNDS
William H. Vining, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application January 17, 1948, Serial No. 2,832
8 Claims. (Cl. 23—184)



1. The process for production of sodium hydride which comprises passing a stream of hydrogen upwardly through a mass of finely divided sodium hydride at a velocity sufficient to create and maintain a solid-in-gas dispersion substantially without transporting said mass in the out-flowing gas stream and introducing molten sodium into said dispersion, while maintaining the temperature of said dispersion between the melting point of sodium and the decomposition point of said hydride.

2,474,022
METHOD OF PURIFYING PTEROYL-GLUTAMIC ACID
Coy W. Waller, Pearl River, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 5, 1946, Serial No. 701,393
9 Claims. (Cl. 260—251)

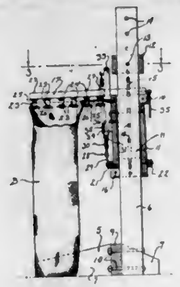
1. A method of separating pteroylglutamic acid from related pterins which comprises the steps of dissolving pteroylglutamic acid in an aqueous solution of a strong acid having a normality of at least about 2 N and thereafter diluting the solution with water whereupon pteroylglutamic acid is precipitated and recovering the precipitated pteroylglutamic acid.

2,474,023
METHOD OF GAS-SHIELDED ALTERNATING CURRENT ARC WELDING
Richard F. Wyer, Rexford, N. Y., assignor to General Electric Company, a corporation of New York
Application February 17, 1944, Serial No. 522,686
8 Claims. (Cl. 219—10)

1. The method of fusing a metal with an arc established between said metal and a substantially non-consumable metallic electrode selected from the group consisting of tungsten, thoriated tungsten, and tantalum which comprises the steps of supplying about said arc and the portions of said metal rendered molten thereby, a gas selected from the group consisting of argon and helium, and energizing said arc from a source

of alternating current having an open circuit voltage greater than that voltage at or below which complete rectification of current flow through said arc occurs, said open circuit voltage being great enough to cause current flow in both directions through said arc.

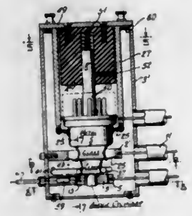
2,474,024
DISAZO DYESTUFFS
Carl Ivar Anderson, Buffalo, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
No Drawing. Application November 29, 1944, Serial No. 565,795
3 Claims. (Cl. 260—176)



1. A secondary disazo dyestuff which in the form of its sodium salt is 1,7-disazo-8-hydroxynaphthalene-4-sodium sulfonate wherein the azo group in the 1-position is linked to an acetoacetanilide radical, and the azo group in the 7-position is linked to a nitrophenol in the 2-position thereof, said nitrophenol being selected from the group consisting of 4-nitrophenol, 6-nitro-4-sulfophenol and 4-nitro-6-sulfophenol, said dyestuff dyeing animal fibers from an acid bath in level green to brown shades which when chromed yield green to olive shades having improved fastness to light as compared with the dyeings before chroming.

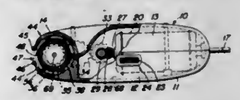
2,474,025
BAG HOLDER
Glenn Aspinall, Burlington, Wis.
Application June 19, 1946, Serial No. 677,772
4 Claims. (Cl. 248—99)

1. A bag holder comprising an upright standard, an elongated sleeve slidably mounted on the standard, a supporting cuff adjustably secured to the standard above the sleeve, a spring connection between the sleeve and the cuff for normally holding the sleeve in a raised position, bag spreader and supporting arms carried by the sleeve, and antifriction rollers carried by the opposite diagonal corners of the sleeve for engaging the opposite faces of the standard.



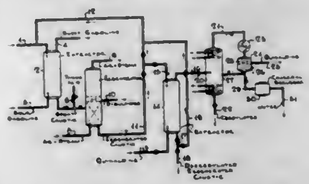
4. In a bag holder, a support, bag holding and spreading arms carried by the support, depending rollers carried by said arms for engaging in

the bag mouth, each of said rollers including a body portion and an annular bag engaging flange,



and radially extending bag penetrating pins carried by said flange.

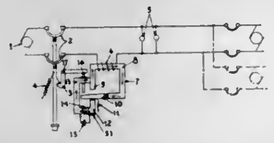
2,474,026
MOUNTING FOR ELECTRON DISCHARGE DEVICE OF THE HIGH-FREQUENCY TYPE
John B. Atwood and Bertram Trevor, Riverhead, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application April 6, 1944, Serial No. 529,716
7 Claims. (Cl. 315—39)



1. A mounting for an electron discharge device of the type having a pair of spaced grid and anode electrodes each of which has a planar disc-like terminal element which extends transversely of the discharge device is symmetrical with respect to the axis of the discharge device, and a cathode which is surrounded by and coupled to a metallic shell forming part of an enlarged base for said device, the anode terminal element being smaller than the grid terminal element and located near one end of said device; said mounting comprising a single hollow outer metallic enclosure which is longer than the discharge device and adapted to accommodate and support the discharge device with the longitudinal axis of the enclosure substantially coinciding with the longitudinal axis of the electron discharge device, a first metallic plate in the interior of said enclosure extending transversely of the longitudinal dimension thereof and attached to at least one wall of said enclosure, said plate having an aperture therein and a plurality of contact fingers around the edges of said aperture for engaging the grid terminal element of the discharge device, a second metallic plate in the interior of said enclosure also attached to one wall of said enclosure and parallel to said first plate but spaced therefrom, said second plate having an aperture in a portion thereof and a plurality of contact fingers around the edges of said aperture for coupling to the anode of the discharge device, the aperture of said second plate being smaller than the aperture of said first plate, and a hollow metallic tube completely within said enclosure and adapted to be connected at one end to said enclosure and at its other end adapted to surround at least a portion of and coupled to the metallic shell of the discharge device, said metallic tube and surrounding enclosure forming a line resonator, said enclosure having an aperture lying approximately in the same plane as one of said plate for enabling a line section to be coupled to that electron discharge device electrode which is adapted to be in circuit with said one plate, said enclosure having another aperture lying approximately one-quarter of a wavelength from that end of said metallic tube which is located within and connected to said enclosure for enabling a tuning line stub to be coupled to said line resonator.

2,474,027
ELECTROMECHANICAL SAFETY RAZOR
Morris Berger, Burlington, N. J.
Application March 18, 1946, Serial No. 655,127
5 Claims. (Cl. 30—42)

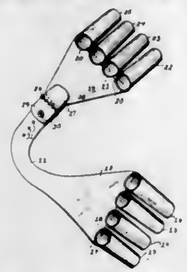
1. An electric safety razor comprising a longitudinally split casing forming upper and lower separable sections, the forward end of said lower section forming a semi-cylindrical cutter housing terminating in a transversely extending rounded guard lip, a semi-cylindrical cutter housing hinged to said upper section adapted to swing into position over said lower cutter housing and formed with a transversely extending rounded guard lip disposed in parallel spaced relation with said first-mentioned guard lip, a blade-supporting shaving cylinder rotatably mounted between said cutter housings, strip cutter blades detachably supported on said shaving cylinder, a gear on one end of said shaving cylinder, an electric motor in the opposite end of said split casing, means for energizing the same, and a gear train between said gear and electric motor.



2,474,028
RECOVERY OF PHENOL SALTS FROM AQUEOUS SOLUTIONS
Carl W. Berger, McPherson, Kans., assignor to The Inventors Guild, Newark, N. J., a partnership
Application April 6, 1946, Serial No. 660,289
1 Claim. (Cl. 260—621)

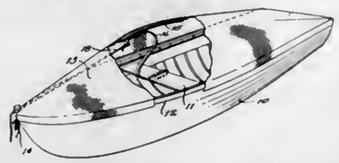
In the extraction of sulfur and phenolic impurities from hydrocarbons containing same by

the use of aqueous caustic as the solvent, the caustic extract being regenerated by oxidation to remove mercaptans, thereby obtaining a regenerated caustic, the improvement comprising extracting, in a second extraction step, at least a portion of said regenerated caustic with a normally liquid organic base having two aromatic cyclic groups, one of which contains a nitrogen atom, thereby obtaining a second extract and a raffinate phase containing substantially all of the unused caustic, separating the phases, removing the organic base from the extract, recycling said base to the second extraction step, and recycling said raffinate phase to the step for extraction of sulfur and phenolic impurities from the hydrocarbons.



2,474,029
TRIPPING DEVICE
Donald I. Bohn, Pittsburgh, Pa., assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 11, 1944, Serial No. 558,268
5 Claims. (Cl. 175—294)

1. An electromagnet for controlling the operation of a circuit breaker, said electromagnet having an armature having an energized and de-energized position, a pole face adjacent to and forming an air gap with said armature, a first magnetic path including said armature air gap and pole face, a second closed iron magentic path including said armature and by-passing the air gap between said armature and pole face of said magnetic path when said armature is in its de-energized position, a first winding connected in series in the circuit to be protected by the circuit breaker, said winding being on the core of said first magnetic path, a second winding on the core of said by-pass magnetic path, and circuit connections for said second winding such that for currents of a predetermined amplitude in a predetermined direction in said first winding, said by-pass has a predetermined reluctance at a predetermined value of said current so that the flux induced by said current finds a path of lower reluctance across said air gap and for currents of a lower than said predetermined amplitude in a direction opposite to said predetermined direction in said first winding, said by-pass has said predetermined reluctance at said different than said predetermined value of said current so that flux induced by said current finds a path of lower reluctance across said air gap at said different than said predetermined current value.

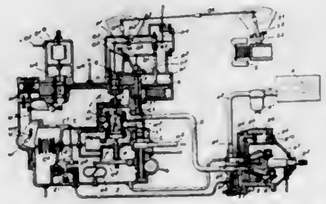


2,474,030
NONSLIP GOLF GLOVE
Charles W. Braswell, Long Beach, Calif.
Application September 11, 1947, Serial No. 773,393
1 Claim. (Cl. 273—35)

In a positive grip for golf clubs, the combination which comprises a friction gripping strap having an outwardly flared end with a plurality of spaced tubular finger-receiving open end stalls carried by the said outwardly flared end, the opposite end of said strap having a folded over flap with snap fasteners adjustably connecting the flap to the strap, and an outwardly flared pad also having a plurality of spaced tubular finger-receiving open end stalls carried by the larger end thereof and having a clip with a loop therein on the smaller end, said loop providing means for at-

taching the said pad to the folded over end of the strap whereby with the strap wrapped around the handle of a golf club, the position of the finger-receiving stalls may be adjusted so that with the fingers of one hand in the stalls of the strap and the fingers of the other hand in the stalls of the pad, the handle may be positively gripped for use.

2,474,031
BOAT COVER
Frank D. Burns, Muskegon, Mich.
Application January 9, 1946, Serial No. 639,956
6 Claims. (Cl. 135—6)

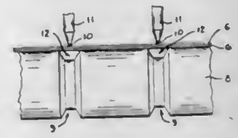


1. A boat cover comprising a flexible sheet adapted to overlie a boat and to be fastened at its edge portion to the boat, a resilient element formed adjacent one end for attachment to the central part of a boat and shaped normally to lie in a generally horizontal position when it is attached in the boat, and a cord connected to the other end of the resilient element and extending through the sheet to pull the element to a generally vertical position in engagement with the central part of the sheet.

2,474,032
PROCESS FOR REMOVING A FLUORINE COMPOUND FROM A LIQUID HYDROCARBON
Alva C. Byrns, Los Altos, Calif., assignor to The Permanente Metals Corporation, Oakland, Calif., a corporation of Delaware
No Drawing. Application August 6, 1945, Serial No. 609,337
4 Claims. (Cl. 196—41)

1. Process for removing a fluorine compound from a liquid hydrocarbon containing the same which comprises passing said liquid through a bed of magnesium hydroxide aggregate obtained by forming agglomerates of uniform size and shape from a magnesium oxide-containing mixture substantially free from silica with an amount of water sufficient to hydrate said magnesium oxide, and allowing said agglomerates to hydrate and harden.

2,474,033
APPARATUS FOR METERING THE FUEL SUPPLIED TO PRIME MOVERS
Reginald Henry Douglas Chamberlin and Charles Horace Lionel Wynne, London, and John Skellern, Northolt, England, assignors to D. Napier & Son Limited, London, England, a company of Great Britain
Application September 26, 1947, Serial No. 776,192
In Great Britain September 30, 1946
3 Claims. (Cl. 103—38)

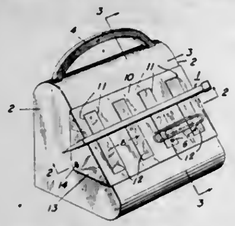


1. Apparatus for metering the fuel supplied to a prime mover of a type adapted for driving a variable pitch air screw comprising in combination a metering orifice, the dimensions of which in directions at right-angles are determined by parts of two relatively movable members, a pump operative to deliver fuel in variable quantity to the metering orifice, means for driving the pump by and thus in speed relation to the prime mover, a tank containing fuel under pressure with means for supplying fuel from this tank to the said pump, means for moving and setting in relation to the said metering orifice one of the said members which determines the dimensions of this orifice, this means being actuated in accordance with the temperature of the air at the entry to the compressor of the prime mover, means for manually moving the second of the said two members which determine the dimensions of the metering orifice, a governor operative to set the airscrew and thereby control the speed of the prime mover, a servomotor operative to set the said governor, a valve controlling the flow of pressure fluid to the said servomotor and connected to and manually movable with the said second metering orifice member, at least one valve actuated by the piston of the said servomotor as it moves and controlling the flow of pressure fluid to that servomotor in a manner which will delay its action on the airscrew governor, a second servomotor with means for controlling it in accordance with the pressure of the air at the intake of the compressor to the prime mover, a member movable against a spring constituting an abutment, the member being subjected on the one hand to the pressure of the fuel as delivered by the said pump and on the other hand and oppositely to the pressure of the fuel which has passed through the said metering orifice, means whereby the said second servomotor is operative to vary the pressure exercised by the said spring abutment on the said movable member, and means whereby movement derived from the said movable member determines the stroke of the said fuel pump and thus the volumetric delivery of the pump.

2,474,034
BLEACHING POPLAR GROUNDWOOD
Kenneth A. Craig, Appleton, Wis., assignor to Paper Patents Company, a corporation of Wisconsin
No Drawing. Application December 4, 1946, Serial No. 713,917
2 Claims. (Cl. 8—106)

1. In the paper art, the process of treating poplar groundwood contaminated with fungi rot which comprises subjecting the contaminated groundwood to the action of an alkaline hypochlorite solution having a pH value of about 9–11 and a temperature of about 25°–50° C., sufficient hypochlorite being present to provide about 7–15 per cent available chlorine based on the groundwood, and then acidifying said solution after the consumption of the available chlorine.

2,474,035
METHOD AND APPARATUS FOR MAKING CONTAINERS
Harry D. Crandon, Woodstock, Conn., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application December 26, 1944, Serial No. 569,904
6 Claims. (Cl. 154—116)

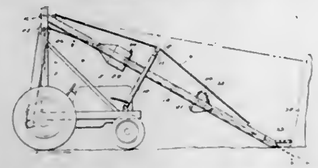


1. The method of forming a fused seam between thin sheets of thermoplastic material comprising the steps of assembling the sheets in superimposed relation, positioning the superimposed sheets on support means having an air-recess in alignment with the desired location for the seam, providing jet means on the opposed side of the superimposed sheets and spaced therefrom, directing heated non-inflammable gases through the jet means onto the adjacent sheet at said location, said gases having a temperature sufficient to cause the portions of the superimposed sheets at said location to be heated to a fusible state, and controlling the pressure at which the gases are directed onto said sheet to avoid substantially distorting the sheets and to bring about an integral bonding of the heated portions, the air-recess of the support means extending transversely beyond the limits of the heated portions of the sheets a sufficient amount to prevent conductance of heat to the support means.

2,474,036
PAPERWEIGHT
John J. Curley, Brockton, Mass.
Application August 19, 1946, Serial No. 691,518
5 Claims. (Cl. 120—82)

1. A paper weight comprising a body portion of non-magnetic material, one face of the body portion having a recess formed therein, said recess having a flat bottom portion, vertical sides and ends, a permanent magnet, co-extensive with the recess and seated therein, said magnet having a pair of relatively long parallel pole pieces, and a non-magnetic cover enclosing the magnet,

said cover having complementary openings to receive the end portions of the pole pieces, the ex-



posed surfaces of the pole pieces being substantially flush with the surface of the cover.

2,474,037

PORTABLE BRUSH AND TREE CUTTING MACHINE OF THE HAMMER-DRIVEN CUTTER BLADE TYPE

Antum E. Cuthrell, Pleasanton, Tex.

Application February 28, 1946, Serial No. 651,004
1 Claim. (Cl. 144—34)

A tree felling apparatus comprising in combination, a power operated vehicle, a pair of tracks, means pivotally supporting the tracks at corresponding ends thereof on one end of the vehicle to incline downwardly over the vehicle longitudinally thereof and be swung vertically to vary the inclination of said tracks, a cutter slidably mounted on the lower ends of the tracks for movement downwardly under the base of a tree, an anvil at the rear end of the cutter, a hammer mounted to travel downwardly on the tracks to strike the anvil, means connecting the hammer to the power plant of the vehicle for raising the hammer, means for connecting the anvil to the hammer for raising the cutter to withdraw the cutter from the ground, and a pair of upstanding rams on the other end of the vehicle pivoted thereon and pivotally connected to said tracks to vary the inclination thereof with said tracks interposed between the rams of the pair and suspended adjacent both ends therefrom.

2,474,038

COMPOSITE METAL

Ermand H. Davignon, Attleboro, Mass., assignor to Metals & Controls Corporation, Attleboro, Mass., a corporation of Massachusetts

Application March 3, 1945, Serial No. 580,901
5 Claims. (Cl. 29—196.3)

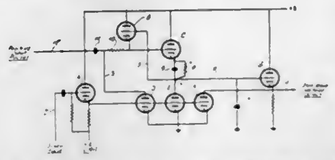
1. A composite metal comprising a precious metal layer, a base layer of beryllium-copper, an intermediate layer of iron, a protecting metal layer on said base layer, and a protecting metal layer on said iron layer, said layers being bonded together.

2,474,039

METHOD OF FORMING COMPOSITE METAL HAVING A NICKEL-PLATED BERYLLIUM-COPPER BASE AND GOLD OR SILVER BONDED THERETO BY A COPPER-PLATED IRON SHEET

Ermand H. Davignon, Attleboro, Mass., assignor to Metals & Controls Corporation, Attleboro, Mass., a corporation of Massachusetts

Original application March 3, 1945, Serial No. 580,901. Divided and this application May 1, 1946, Serial No. 668,442
3 Claims. (Cl. 29—189)



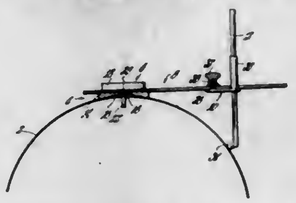
1. The method of forming a composite metal having a surface of a metal selected from the group consisting of gold and silver, and a beryllium-copper base comprising coating at least one side of said base with nickel, coating a sheet of iron with a protecting layer of copper, and then bonding the precious metal layer to said iron sheet and bonding said iron sheet to said base layer.

2,474,040

PULSE INTEGRATING CIRCUITS

James R. Day, Peconic, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application November 16, 1945, Serial No. 629,169
10 Claims. (Cl. 250—27)



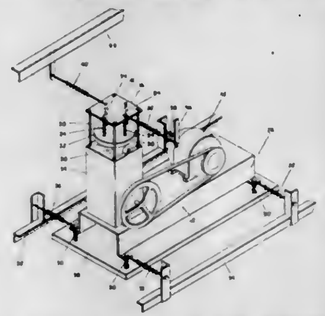
2. A pulse integrating circuit comprising a first vacuum tube having grid, anode and cathode electrodes, means for normally biasing said tube to the anode current cut-off condition, an input circuit including in series therewith a capacitor and a resistor coupled to said grid for supplying recurring pulses thereto of such magnitude and polarity as to cause said tube to conduct for substantially the duration of each pulse, a condenser connected between the cathode of said tube and ground, whereby an incremental increase in voltage is built up on said condenser for each input pulse during a cycle of operation, a second vacuum tube having a grid, anode and cathode, a connection from the cathode of said last tube to the grid of said first tube, a connection from the grid of said second tube to the cathode of said first tube, a source of anode polarizing potential connected to the anodes of both tubes, a normally non-conducting space discharge path connected across said condenser, and means for causing said space discharge path to become conductive after a predetermined number of input pulses.

2,474,041

APPARATUS FOR SCRIBING CIRCLES ON CYLINDRICAL MEMBERS

Charles A. Dimmock, Jr., Springfield, Mass.

Application October 22, 1947, Serial No. 781,318
2 Claims. (Cl. 33—21)



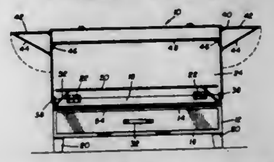
1. Apparatus for scribing on a cylindrical member having a pilot hole disposed at right angles to the longitudinal axis thereof comprising in combination, a support for resting on the cylindrical member having a pilot hole for registering with the pilot hole of the cylindrical member, a journal member having a journal portion on the lower side thereof and a pilot extending downwardly therefrom for insertion through the pilot hole of the support and into the pilot hole of the cylindrical member, said journal portion being disposed concentrically relative to said pilot hole and pilot, an arm journalled on said journal portion of the journal member having an outer free end and provided with a longitudinal slot therethrough radially extending from the longitudinal axis of said journal portion, a guide means slidable along said slot having a hollow longitudinal guideway extending therethrough having a longitudinal axis which is disposed parallel to the longitudinal axis of said journal portion, means for securing said guide member in adjusted positions along said slot, and a scriber reciprocable up and down in said guideway having a lower end for scribing a cylindrical member.

2,474,042

VIBRATION ELIMINATING APPARATUS

Edward J. Egle, Jr., Woodside, N. Y., assignor to the United States of America as represented by the United States Atomic Energy Commission

Application July 16, 1945, Serial No. 605,365
4 Claims. (Cl. 103—218)



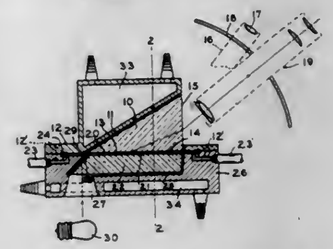
1. Vibration inhibiting apparatus for inhibiting the reciprocatory vibrations of a pump having a reciprocating piston comprising, in combination with said pump, a movable weight, first resilient means so interconnecting said pump and said weight that said weight is reciprocated and its axis of reciprocation is substantially coincident with the axis of reciprocation of said piston, second resilient means for supporting said pump and third resilient means connected to said pump and to a fixed lateral support for opposing lateral movement of said pump.

2,474,043

COLLAPSIBLE CAMP STOVE

James Henry Eichen, Detroit, Mich.

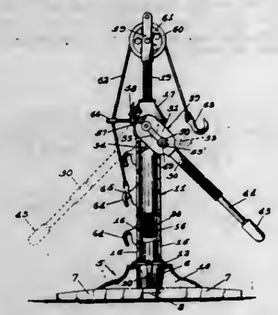
Application November 27, 1946, Serial No. 712,597
3 Claims. (Cl. 126—9)



1. A collapsible camp stove comprising a base, foldable legs secured to said base, a drawer in said base, an upstanding marginal rim on said base, a hinged back portion foldable upon said base to constitute a cover therefor, side members hinged to the ends of said back, said side members having channels at their lower edges for embracing said upstanding rim, and a hearth plate on said base, and a removable grate having foldable legs supported over said hearth plate.

2,474,044

PRISM SYSTEM FOR REFRACTOMETER OF THE ABBÉ TYPE

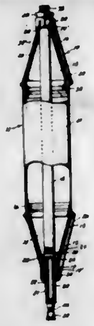


John W. Forrest, Brighton, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York

Application February 12, 1947, Serial No. 728,026
5 Claims. (Cl. 88—14)

1. In a refractometer of the critical angle type for testing liquids comprising, a prism having a light refractive face against which a liquid specimen is held, a light transmitting member having a surface which is parallel to and spaced from said refractive face to provide a space for said liquid specimen, and a reflecting surface formed on said member at an angle to and terminating at said first named surface so as to direct light rays from a light source through said member at grazing incidence to the interface formed by the specimen and said surface so that said rays are refracted through said liquid specimen and prism.

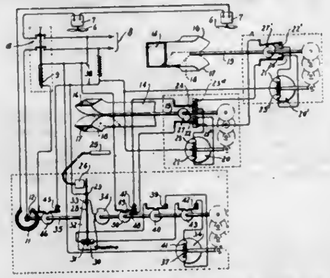
2,474,045
LIFTING JACK
Harry D. Freeland, Waynesburg, Pa.
Application February 21, 1946, Serial No. 649,187
3 Claims. (Cl. 254—139)



1. A portable lifting jack including a base adapted to flatly rest on the ground, a hollow standard rising from the base, a lifting member vertically movable in and projecting above the standard, manually operable means carried by the standard and operatively connected to the lifting member to raise and lower the latter, a pulley on the upper end of said lifting member, a cable passing over said pulley, quick-detachable means to selectively anchor one end of the cable to the standard at any desired one of a plurality of vertically spaced points, and a lifting element on the other end of said cable engageable with the load to be lifted.

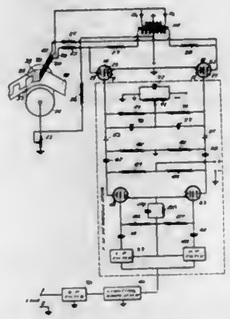
2,474,046
PROCESS OF PRODUCING LACTIC ACID
Karl W. Fries, Rhinelander, Wis., assignor to Rhinelander Paper Company, Rhinelander, Wis., a corporation of Wisconsin
No Drawing. Application October 19, 1945, Serial No. 623,431
3 Claims. (Cl. 195—48)

1. The method of producing lactic acid from waste sulphite liquor containing lignins, sugars and free and loosely combined sulfur dioxide, which comprises adding sufficient lime to said waste liquor to effect a pH therein of between 8.0 and 8.8, thereby causing the precipitation of said free and loosely combined sulfur dioxide, as calcium sulfite, allowing the lime-treated mass to stand for a time not exceeding 1½ hours if the temperature of said mass is above 35° C., separating the resulting precipitate from the liquor, adjusting the liquor to a temperature between 30° and 40° C. and to a pH between 6.3 and 6.7, adding to said liquor an inoculum of *Lactobacillus pentosus* 124–2 and a nutrient therefor, maintaining said inoculated liquor within the temperature and pH limits last mentioned until a substantial conversion of said sugars to lactic acid has occurred, and recovering the lactic acid so produced.



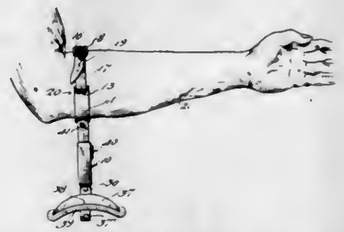
2,474,047
EXPANSIBLE PLUG FOR SEALING BORES
Andrew Gorzkowski, Avoca, Pa.
Application March 7, 1946, Serial No. 652,509
3 Claims. (Cl. 220—24.5)

1. An expansible plug comprising a flexible body insertable within a fluid pressure line, said body having tapered ends, means for inflating said body and means for selectively contracting and expanding said body, said last mentioned means includes an elongated rod extending longitudinally through said body, members fixedly



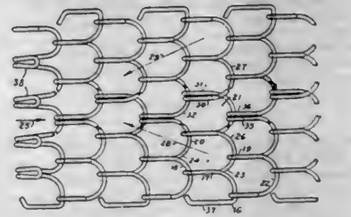
secured to the ends of said body and adjustably mounted on said rod, annular channels about said body adjacent each end, retaining rings received in said channels, and means rigidly securing said retaining rings to said members.

2,474,048
HEATING AND VENTILATING SYSTEM
Elmer A. Greenlee, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application June 18, 1945, Serial No. 600,119
2 Claims. (Cl. 236—49)



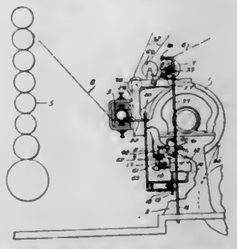
2. In a combined compartment heating and ventilating system having a heater for the compartment and a motor for driving a fan to deliver outside air into the compartment, the combination of, a thermostat adapted to be arranged for response to temperature changes in said compartment over a substantial range, means controlled by said thermostat and operating to maintain said heater effectual over the lowermost small portion of said range and ineffectual over the remaining higher part of the range, and means controlled by said thermostat to maintain said fan motor idle at the lowermost limit of said range and responsive to a rise in temperature from such lowermost limit to initiate operation of said fan motor at low speed and then increase the motor speed progressively as the temperature increases throughout the remainder of the range.

2,474,049
HIGH-SPEED TELEGRAPHY SIGNAL RECORDER
Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 26, 1945, Serial No. 584,859
7 Claims. (Cl. 178—89)



1. A means for simulating the records made by an undulator recorder of telegraph signals, comprising two contact elements energized alternately for impressing marks along two substantially parallel spaced lines on a moving tape and a third element energized transiently as the energy is alternated from one contact element to the other, said third element making marks along lines approximately at right angles to said two spaced parallel lines.

2,474,050
ARMREST
Herbert H. Harris, Sacramento, Calif.
Application March 2, 1946, Serial No. 651,507
5 Claims. (Cl. 248—118)



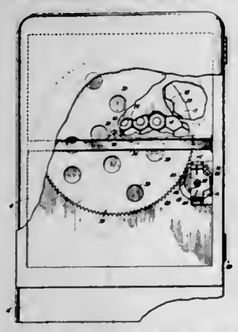
2. A support comprising an arm band, a longitudinally extensible prop, means for pivotally securing said band to said prop, means for locking said band in selected adjusted positions relative to said prop, means for locking said prop in longitudinally adjusted positions, a body engaging member having apertures therein, means for pivoting said member to a selected end of said prop, said band including an arcuate arm engaging member, means for securing said member to the arm, means for pivotally securing said arm engaging member to said prop, support means secured to said apertured member.

2,474,051
ENDLESS BELT GRADER
Bernis W. Hatch, Atlanta, N. Y.
Application April 29, 1946, Serial No. 665,709
4 Claims. (Cl. 209—307)

1. A belt for grading fruit and vegetable products and like articles according to size comprising a series of transversely extending wire links each having pivotal engagement with adjacent links at transversely spaced points and being shaped to provide article receiving openings therebetween intermediate said points of engagement, said openings having substantially equal width longitudinally and transversely of the belt and said links being shaped to provide a series of valleys spaced longitudinally of said belt and inclined obliquely inwardly and rearwardly of the direction of travel of the belt, from both margins toward the center thereof, to distribute the movement of the articles fed onto said belt from the margins toward the center thereof.

2,474,052
DOCTOR OPERATING MECHANISM
Anton Walter Johnson, Masson, Quebec, Canada
Application May 6, 1946, Serial No. 667,681
1 Claim. (Cl. 92—74)

A paper making machine including a frame, a dryer roll mounted in the frame, a calender forwardly of the dryer roll and adapted to receive a paper web therefrom, a spring roll between the dryer roll and the calender and adapted to engage and to impose a normal degree of tension on a paper web passing thereunder from the dryer roll to the calender, said spring roll being mounted in vertically movable bearings on the frame, springs carried by the frame and resiliently supporting said bearings to limit the vertical movement thereof, said spring roll and bearings moving downwardly a slight distance on breakage of such paper web, a doctor member cooperating with but normally disengaged from said dryer roll, fluid actuating means for shifting the doctor member into engagement with said dryer roll, a lever pivoted intermediate its ends on the frame



with one end thereof in the path of movement of one of the bearings of the spring roll, whereby slight downward movement of said bearing effects pivotal motion of the lever, and a control member for the actuating means of the doctor member engageable by the other end of said lever upon pivotal motion of said lever in response to downward movement of said spring roll bearing induced by breakage of such paper web, the pivotal point of the lever being closer to the bearing than to the control member.

2,474,053

BOTTLE VENDING MACHINE WITH MAGAZINE ROTATING ON HORIZONTAL AXIS

Elmer C. Johnson and Jerome E. Hagstrom, Kansas City, Mo., assignors, by mesne assignments, to The Vendo Company, Kansas City, Mo., a corporation of Missouri

Application March 27, 1944, Serial No. 528,270
8 Claims. (Cl. 312—97.1)

7. In a vending machine of the character described, a cabinet provided with a wall having an elongated access opening formed therein; a magazine rotatably mounted on one side of said wall, said magazine having a plurality of open-end stalls forming a part thereof, certain of said stalls being movable successively into simultaneous register with the said access opening as the magazine is rotated; and a rotatable guard plate on the opposite side of the said wall, said plate having a number of perforations formed therein, each of said perforations registering with a portion of the access opening as the plate is rotated, said perforations being arranged in staggered relation whereby certain of the perforations register with one portion of the access opening and other perforations register with other portions of the access opening respectively.

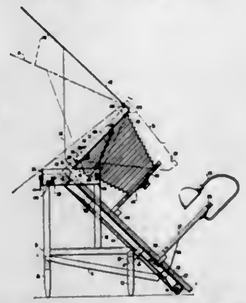
2,474,054

ELECTRIC RELEASE FOR TOY GUNS

Clinton Jones, Hampton, Va.

Application May 1, 1944, Serial No. 533,473
5 Claims. (Cl. 124—32)

5. In an artillery trainer having an inclined plane slidably supporting a firing bolt and having a coiled expansion spring engaged concentrically upon the bolt and operating between a collar fixed on the bolt and a fixed portion of the inclined plane for urging the bolt forward to shoot a projectile, means for holding the coiled spring under varying tension to control the forward velocity of the coiled spring, comprising an elongated latch arm, means on the inclined plane at one side of the bolt pivotally supporting said latch arm intermediate of its ends so that one end of said latch arm extends across the top of the bolt to be pivoted toward the bolt to be engaged with a desired convolution of the coil spring, means on the inclined plane on the other side of the bolt for supporting said one end of said latch arm when engaged with the desired convolution of the coil spring, and an electro-magnetic means engageable with the other end of said latch arm for pivoting said latch arm to disengage said one end of said latch arm from said one end supporting means and from the desired convolution of the coil spring freeing the coil spring to shoot the firing bolt forward, said electro-magnetic means comprising an arm of magnetic material having one end overlying the said other end of said latch arm, means on said inclined plane pivotally supporting said arm of magnetic material intermediate of its ends, means operating between the other end of said arm of magnetic material and said inclined plane urging said latter arm into a position in which its said one end will be free of said latch arm, and a manually closable circuit including an electro-magnet beneath said one end of said arm of magnetic material to pivot said one end downward to engage and pivot said latch arm, said magnetic arm urging means comprising a contraction spring operating between the said other end of said magnetic arm and a lug fixedly mounted on said inclined plane.

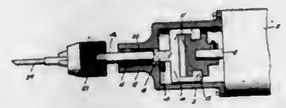


2,474,055

IMAGE COPYING PROJECTION MACHINE

Robert Merritt Lacey, West Orange, N. J., assignor to The Merritt Lacey Corporation, New York, N. Y., a corporation of New York

Application June 15, 1948, Serial No. 33,111
14 Claims. (Cl. 88—24)



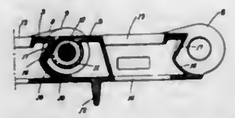
1. In a device of the class described, a substantially U-shaped horizontal frame having two side members and one rear transverse member, a support for the frame, a track structure pivotally mounted at the rear of said frame and extending forwardly therefrom, said structure being operatively movable between predetermined upper and lower limiting positions, an object easel extending upwardly from and slidably movable longitudinally relative to the track structure, an object lens in facing relation to said easel and movable longitudinally relative to the track structure, a transparent working easel mounted over said frame and spaced rearwardly from said lens, a camera bellows operatively connecting said lens and working easel, and separate manually manipulable transmitting mechanisms for operatively moving said object easel and said lens relative to said track structure.

2,474,056

RECIPROCATING TOOL

Leo M. Larsen, Spokane, Wash.

Application March 9, 1945, Serial No. 581,776
1 Claim. (Cl. 74—57)



An attachment for an electric motor and comprising a housing secured to one end of the motor and enclosing an adjacent end of the shaft of the motor, a collar secured to the shaft snd having a cam groove extending circumferentially thereof, a yoke positioned in the housing and having inturned ends engaged in said groove, a stem projecting from the yoke and slidably mounted in the outer end of the housing, said stem having a squared portion, a U-shaped bearing carried by the housing slidably receiving said squared portion of the stem to prevent rotation thereof, said squared portion of the stem forming a shoulder thereon, a coil spring carried by the housing and engaged by said shoulder to provide a shock absorber for the stem and a tool chuck attached to the outer end of the stem.

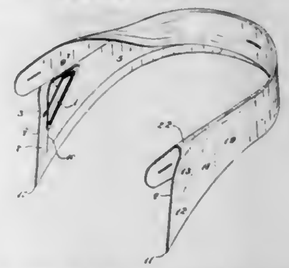
2,474,057

ENDLESS TRACK

Robert G. Le Tourneau, Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California

Application January 26, 1944, Serial No. 519,753
3 Claims. (Cl. 305—10)

1. A track unit comprising an endless track having a plurality of track links pivotally connected together at adjacent ends, spaced sprockets supporting the track and about which sprockets the track engages, and lugs projecting radially from the sprockets, the track links each having an inwardly opening socket therein intermediate its ends and into which sockets said lugs project as the track links ride said sprockets, and the sprockets having peripheral portions of substantial length which matchingly engage the radially inner face of the links immediately at the ends of the sockets.



3. In a track unit which includes an endless track supported and engaged by spaced sprockets, said track comprising a plurality of track links pivoted together, shoulders on adjacent link ends, such shoulders being parallel to each other and sloping at an angle to the plane of the inner face of the track when the links are disposed horizontally between the sprockets, such shoulders terminating short of the opposite face of the links, the ends of the links beyond the shoulders forming extensions of such shoulders and both such extensions being of arcuate form and concentric with the longitudinal axis of the adjacent pivots between the links.

2,474,058

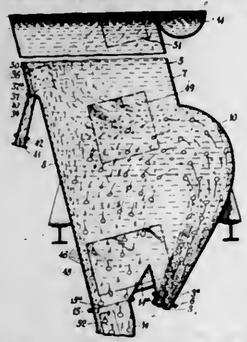
COLLAR STIFFENER

Locksley D. McNeill, Winnipeg, Manitoba, Canada

Application April 30, 1945, Serial No. 591,056
3 Claims. (Cl. 2—132)

3. A collar stiffener comprising in combination a pin and a semi-rigid tab, said tab being bounded by edges of which one is substantially parallel with and adjacent to at least the mid-section of the front edge of a collar, and another edge acutely angled with respect to the first-mentioned edge, said last mentioned edge inclining rearwardly and upwardly toward the neckband edge of the collar, the material of the tab between said edges reinforcing the tie knot region of the collar, said pin being secured to said tab and emerging from the first-mentioned edge at a point upon the length thereof, said pin being angled to lie parallel to, but externally spaced from, said first-mentioned edge, and projecting beyond the end of the first-mentioned edge to reinforce alone, the collar point region.

2,474,059

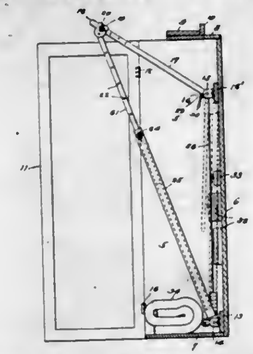


INCLINED CURRENT HYDRAULIC SEPARATOR

Frederick C. Morton, Buffalo, N. Y.

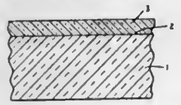
Application February 25, 1947, Serial No. 730,708
13 Claims. (Cl. 209—157)

1. Apparatus for effecting the separation of granular material composed of constituents of different specific gravity or different weight comprising an upwardly extending hollow shaft having front, rear and side walls and a bottom, the rear wall being inclined to the vertical in an outward direction from its lower to its upper end and the shaft having a bottom opening adjacent the rear wall and another bottom opening adjacent the front wall, means connected to the shaft and communicating with the bottom opening adjacent the front wall for forcing through said opening and into the shaft a liquid medium and



granular material in suspension, the liquid medium filling the shaft and escaping from its upper end and the liquid medium as it enters the shaft having such velocity that it carries the granular material with it substantially as a column moving upwardly within the shaft, means operative at a point of travel of the column remote from the bottom opening through which it enters the shaft for directing it across the shaft, means for so regulating the velocity and direction of the liquid medium that the components of the column of granular material which are of greater specific gravity or greater weight will fall from the column within the zone wherein the column is directed across the shaft and as they fall will impinge upon or approach the inclined rear wall and will be directed to and through the bottom opening adjacent said rear wall whence they escape while the remaining components of lighter specific gravity or lighter weight will be carried by the liquid medium to the upper end of the shaft and will escape from

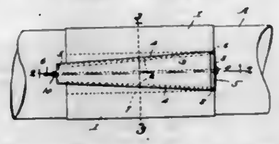
the shaft with the liquid medium, an elevator including an upwardly extending hollow casing of greater height than the shaft and elevator mechanism enclosed within said casing, a pipe connecting the lower portion of said casing and the shaft and communicating with the bottom opening adjacent said rear wall, means for supplying a liquid medium to said casing to a constant level sufficiently elevated above the shaft to provide a pressure head whereby the liquid medium flows from said casing through said pipe into and upwardly through the shaft, the components which escape through the bottom opening adjacent the said rear wall falling through said pipe into the said lower portion of the casing whence they are carried upward by the elevator mechanism and discharged above the liquid level line of said casing, means connected to the upper portion of said casing for carrying away the components discharged by said elevator mechanism and means connected to the upper end of the shaft for carrying away the components of less specific gravity or less weight.



2,474,060
CABINET AND EXERCISING DEVICE
James N. Mosher, South Bend, Ind.
Application February 13, 1946, Serial No. 647,358
1 Claim. (Cl. 272—62)

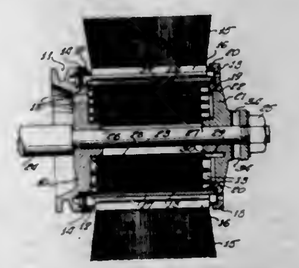
An exercising device, comprising a support, a substantially U-shaped horizontal bar, means for pivotally connecting the ends of the horizontal bar to the support, said U-shaped horizontal bar having openings formed therein, lower tubular sections, means for pivotally mounting the lower tubular sections on the support for vertical swinging movement, telescoping rods having openings movable within the lower tubular sections, metallic straps slidable on the horizontal bar and to which the rods are pivotally connected, slidably

connecting the rods to the horizontal bar, means for securing the straps in adjusted positions on the horizontal bar, and pivotal latches carried by the lower tubular sections and cooperating with the openings of the rods in securing the rods in their adjusted positions with respect to the lower tubular sections.



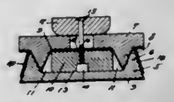
2,474,061
METHOD OF PRODUCING THIN MICROPOROUS SILICA COATINGS HAVING REFLECTION REDUCING CHARACTERISTICS AND THE ARTICLES SO COATED
Harold R. Moulton, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application July 23, 1943, Serial No. 495,906
14 Claims. (Cl. 88—1)

1. An article of the character described comprising a substrate having a thin transparent surface reflection reducing coating of substantially pure silica formed on the surface thereof, said coating being microporous and consisting of the dried silica product of a tetra-alkyl-orthosilicate selected from the group consisting of tetra-ethyl-orthosilicate, tetra-methyl-orthosilicate and mixtures thereof hydrolyzed in situ by an acid inert to silica and the substrate, said coating having a substantially uniform optical thickness of an odd multiple of a quarter wave length of the incident light and a substantially uniform effective index of refraction less than that of massive silica, said coating being firmly adherent to the substrate and being resistant to abrasion.



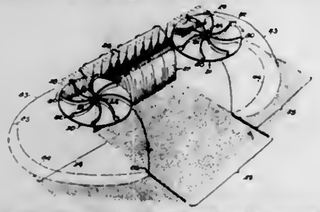
4. The method of producing a surface reflection reducing coating on the surface of an article comprising the steps of applying to said surface a liquid solution consisting of controlled amounts of tetra-alkyl-orthosilicate selected from the group consisting of tetraethylorthosilicate, tetramethylorthosilicate and mixtures thereof and a mineral acid inert to silica as a decomposing agent for the tetra-alkyl-orthosilicate, the tetra-alkyl-orthosilicate being decomposable by said acid to produce silica, said tetra-alkyl-orthosilicate and acid being dissolved in a volatile organic solvent miscible with both, said solvent being selected from the group consisting of mono ethyl ether of ethylene glycol, mono butyl ether of ethylene glycol, ethyl acetate, methyl acetate, amyl acetate, ethyl alcohol, methyl alcohol, isopropyl alcohol, butyl alcohol, and mixtures thereof, the proportion of acid embodying approximately 1 to 10% of the solution, the combined proportions of acid and solvent embodying at least 90% of the solution, and the proportion of tetra-alkyl-orthosilicate embodying substantially the balance of the solution, the tetra-alkyl-orthosilicate being held in the solution in a substantially undecomposed state until the concentration of the tetra-alkyl-orthosilicate and the acid is increased by evaporation of the solvent sufficiently to permit the acid to decompose the tetra-alkyl-orthosilicate, causing the liquid solution to form on said surface of the article a liquid layer of a uniform thickness which will contain an amount of tetra-alkyl-orthosilicate and acid sufficient to produce on decomposition of the tetra-alkyl-orthosilicate a coating of silica having an optical thickness of an odd multiple of a quarter wave length of the incident light, and evaporating the solvent from said liquid layer so as to bring about the decomposition of the tetra-alkyl-orthosilicate by the acid on the surface of the article and the production of the silica coating in situ on said surface and to the desired optical thickness.

2,474,062
CLAMPING RING
Gerald E. Murphy, Portsmouth, Ohio
Application January 21, 1946, Serial No. 642,583
1 Claim. (Cl. 138—99)



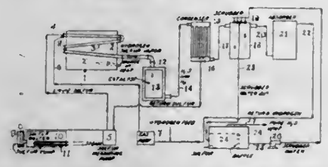
A clamp for pipes or the like, comprising a band proportioned to partially encircle the same, the band having spaced apart and converging longitudinal edges, a flange extending from end to end of each of said edges, a wedge-like key mountable on the band for movement longitudinally thereof, there being longitudinal flanges on the sides of the key adapted for slidable interfitting engagement with the flanges of the band, a plate insertable between the band and the object to which the band is applied, said plate being adapted to bridge the space between, and lap, the longitudinal edges of the band, a cross head on one end of the plate abutting against one end of the band, a cross head on one end of the key opposing said first-named cross head, and a tie device connecting the cross heads and extended longitudinally of the band and key, said tie device being adapted to shift the key longitudinally of the band, whereby to draw the longitudinal edges of the band toward each other, and to lock the key in the position to which shifted.

2,474,063
BRUSH SANDER HEAD
Herman S. Newton, Temple, Tex.
Application May 6, 1948, Serial No. 25,401
6 Claims. (Cl. 51—194)



1. A brush sander including a driving head having a multiplicity of annularly spaced cavities adjacent its perimeter, an equal number of longitudinally slotted tubes retained by their ends in said cavities, a brush slidably mounted in each of said tubes, a retainer ring having cavities corresponding to those of said driving head and receiving the opposite ends of said tubes, said ring further having a bevel on its inner periphery, a cap having a peripheral bevel corresponding to and bearing against the bevel of said retainer ring to secure the assembly for common rotation, a reel interposed between said head and cap and keyed to said cap, a flexible spider on said reel having radial flaps, an abrasive strip attached to each of said flaps, said abrasive strips being wound collectively in overlapping relationship on said reel and extending radially between said brushes and means for rotating said reel through the medium of said cap to effect simultaneous adjustment of said abrasive strips in relation to said brushes.

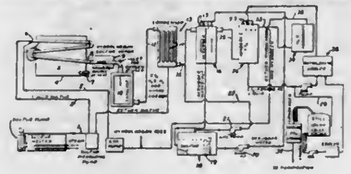
2,474,064
SANDING BLOCK
Joseph Paul, Milwaukee, Wis.
Application October 14, 1947, Serial No. 779,793
2 Claims. (Cl. 51—187)



1. A sanding block comprising removably connected upper and lower sections between which an abrasive sheet is held, means for securing the abrasive sheet to the sanding block embodying, upwardly extended ribs formed along the longitudinal side edges of the lower section, the side surfaces of the ribs being beveled, ribs formed on the lower surface of the upper section, the side surfaces of the latter ribs being beveled, the beveled surfaces of said sections cooperating in gripping the abrasive sheet therebetween, a rectangular block secured between the upper and lower sections, the ends of the abrasive sheet being also clamped between the block and upper section, and means for forcing the upper section into clamping relation with the block securing the abrasive sheet therebetween.

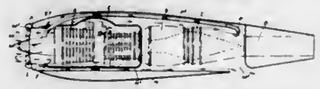
2,474,065
DISTRIBUTION APPARATUS
Grover D. Porter, Roscoe, Ill.
Application April 2, 1945, Serial No. 586,073
3 Claims. (Cl. 275—8)

1. A distributor for loose material comprising an elongated hopper adapted to be supported on a wheeled vehicle to receive material from a tilting dump body on the vehicle, said hopper extending transversely of the vehicle and being open intermediate the ends of its bottom to provide for the discharge of material gravitationally and distribution of the same over the ground area traversed by the vehicle, said hopper having bottom outlets at opposite end portions outwardly beyond the gravitational discharge area, centrifugally acting means for receiving material discharged from said outlets and distributing the same to ground areas on opposite sides of said first area, and means for driving said last mentioned means from a ground-engaging wheel of said vehicle.



2,474,066
METHOD OF MAKING HYDROGEN SULFIDE
Louis Preisman and Charles F. Hobson, Charleston, W. Va., assignors to Barium Reduction Corporation, Charleston, W. Va., a corporation of Delaware
Application January 4, 1946, Serial No. 639,081
3 Claims. (Cl. 23—181)

3. In the method of making hydrogen sulphide, the step which comprises intermittently introducing metered amounts of sulphur in the form of molten sulphur slugs into a vaporizing chamber and therein intimately admixing the same with a stream of hydrogen in an amount considerably in excess of the molecular equivalent of the sulphur in order to accelerate the volatilization thereof, while simultaneously maintaining the temperature in the vaporizing chamber sufficiently high to volatilize the sulphur present in said mixture.



2,474,067
PRODUCTION OF CARBON BISULFIDE AND HYDROGEN SULFIDE
Louis Preisman, Charleston, W. Va., assignor to Barium Reduction Corporation, Charleston, W. Va., a corporation of Delaware
Application May 3, 1946, Serial No. 667,004
2 Claims. (Cl. 23—206)

1. The method of making carbon bisulfide and hydrogen sulfide, which comprises intermittently introducing at predetermined intervals into a vaporizing chamber metered amounts of sulphur in the form of individual slugs of molten sulphur of a predetermined size, admitting thereto a hydrocarbon gas in an amount substantially in excess of the molecular equivalent of the sulphur in order to accelerate the volatilization of the sulphur slugs while simultaneously maintaining

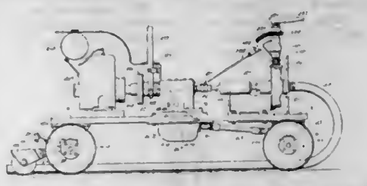
the temperature in said chamber above the boiling point of sulphur, then conducting the mixture of sulphur vapors and hydrocarbon gas through a heated catalyst capable of promoting reaction between the sulphur and the hydrocarbon gas while heating such catalyst to a temperature favorable to the formation of carbon bisulfide and hydrogen sulfide and then separately recovering the two latter products.

2,474,068
AIR INTAKE SYSTEM OF INTERNAL-COMBUSTION ENGINES
Herbert Sammons, Gerrards Cross, and Cecil Louis Cowdrey, Markyate, England, assignors to D. Napier & Son Limited, London, England, a company of Great Britain
Application April 19, 1948, Serial No. 22,018
In Great Britain April 21, 1947
5 Claims. (Cl. 230—132)

1. An air intake system for an internal combustion power plant comprising in combination a power plant, a cowling within which the power plant is mounted with an annular space between the cowling and the power plant through which air can flow over the power plant, a centrally situated fairing at the forward end of the power plant, an annular intake passage around the said fairing through which air can flow to the power plant, a forwardly facing annular intake opening at the end of the said annular intake passage, the inner wall of this intake opening of the intake passage being constituted by the surface of the said central fairing while the outer wall of the said opening and passage is constituted by a hollow structure at the forward end of the said cowling, a plurality of sector-shaped shutters extending radially across the said forwardly facing annular intake opening and each rotatably mounted on trunnions at their ends respectively in the said central fairing and in the said hollow structure forming the outer wall of the intake opening and passage, at least one of the trunnions of each of the said radial sector-shaped shutters being hollow and the shutter formed so that gas entering through the trunnion can flow through the shutter, means for rotating all the said radial shutters simultaneously whereby they may be positioned either so as to permit the

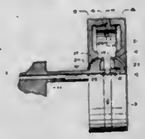
free inflow of air to the said forwardly facing annular intake passage or to obstruct this inflow, means for drawing hot gas from the said power plant and delivering it to parts adjacent to the said forwardly facing intake opening so that this hot gas can flow through the said radial shutters, and an annular opening in the outer wall of the said intake passage constituting a lateral intake through which air can flow into the said annular passage.

2,474,069
FOOD FREEZING TUNNEL
Americo Silvera, Syracuse, N. Y., assignor to Carrier Corporation, Syracuse, N. Y., a corporation of Delaware
Application March 16, 1945, Serial No. 583,125
3 Claims. (Cl. 62—102)



1. In a combination of apparatus of the character described, an enclosure, said enclosure having a floor, ceiling and sides, means disposed at one side of the enclosure housing a cold diffusing apparatus, a distributing duct adjacent the ceiling area for conveying air from the cold diffuser apparatus, a plenum at a side of the enclosure opposite the cold diffuser apparatus, one of the sides of the enclosure forming a side of the plenum, a diffuser grille forming the opposite side of the plenum diffusing air from the plenum into the area formed by said apparatus, duct and plenum, said area constituting a tunnel, and means for conveying food to be frozen through said tunnel.

2,474,070
SWIVEL FOR ELECTRIC CABLES
Edward Sokolik, New Brighton, Minn.
Application September 4, 1945, Serial No. 614,168
8 Claims. (Cl. 173—324)



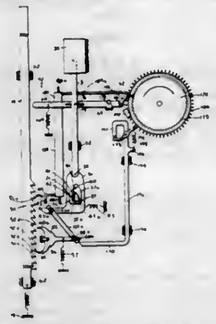
1. In an electrical swivel, the combination and arrangement: a body of insulating material having a closed bore in each end and central portion thereof and including a pair of swiveled members; a pair of tubular conductors of different diameters concentric in the central bore, each including a pair of swiveled members of different diameters, at least one member of each conductor being free for slight yielding axial movement to equalize the said conductors for simultaneous electrical contact, one end-portion of the slender member of each conductor being concentric in one end-portion of the broad member of each conductor, the concentric end-portions of the members of each conductor being curved so as to form, together, an annular tubular swiveled runway for ball bearings, the free end of each member of the large conductor being provided with a mounting orificial disk, one of the said disks being disposed in the end of the broad member and the other upon the end of the slender member, respectively, the free end of each member of the small conductor being provided with a mounting head, respectively; securing elements connected to the mounting orificial disks; caged ball bearings in each runway affording a full circumferential bearing and electrical contact and a non-side shifting anti-frictional swiveled joint; a pair of telescoping insulating tubes between the conductors; yielding means operative on the members of each conductor to maintain electrical contact through the ball bearings; compound bolt terminal-connector and terminal-reach-connector assembly in each end bore connecting large and small conductors to conductor elements respectively; the primary bolts of the compound bolts serving to fasten the conductor members and the secondary bolts as terminals; non-conductor plate in each end bore covering connectors interposed between terminals.

2,474,071
POWER SPRINKLER
Allyn F. Stetson, Chicago, Ill.
Application March 22, 1946, Serial No. 656,189
4 Claims. (Cl. 299—47)

1. A power sprinkler comprising a carriage having wheels thereon, a transmission on said carriage including upper and lower gear boxes, an internal combustion engine on said carriage, a driving connection between said engine and transmission for driving said transmission, means connecting the gears in said lower gear box with the wheels for driving the carriage, a movable spray nozzle on said carriage, means connecting said nozzle with the gears in said upper gear box for actuating said nozzle, a pump on said carriage connected to a source of water supply, conduit means connecting said pump with said nozzle, means connecting said pump with said transmission for driving the pump to supply water to said nozzle, and clutch means for disengaging the driving connection between said transmission and said engine.

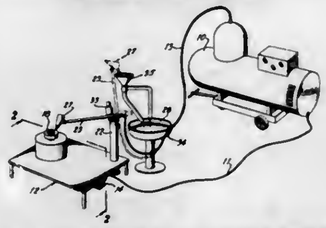
2,474,072
AIR BEARING GYROSCOPE
George H. Stoner, Seattle, Wash., assignor to Boeing Airplane Company, a corporation of Delaware
Application February 7, 1946, Serial No. 646,083
6 Claims. (Cl. 74—5.7)

1. A pneumatic bearing gyroscope or the like comprising a pair of concentric spherical ball



segments fixedly supported on a conduit and defining a fluid chamber intermediate said spherical ball segments, means for supplying pneumatic pressure to said fluid chamber including an orifice connecting said fluid chamber with said conduit, and a gyroscope wheel normally pneumatically supported on said spherical ball segments comprising a pair of opposed disk elements forming an annular fluid chamber communicating with said intermediate fluid chamber and each having an outer flange and an interior spherical segment, propulsion orifices adjacent to each of said outer flanges communicating said annular fluid chamber with the atmosphere and adapted to rotate said gyroscope wheel, passages intermediate said interior spherical segments and said spherical ball segments communicating said annular fluid chamber with the atmosphere and adapted to pneumatically support said gyroscope wheel centrally on said spherical ball segments, and means for holding said pair of disk elements in opposed engagement.

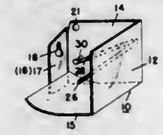
2,474,073
HIGH-VOLTAGE TESTER AND INDICATOR
Edward V. Sundt, Chicago, Ill., assignor to Littelfuse, Incorporated, a corporation of Illinois
Application December 13, 1946, Serial No. 716,160
4 Claims. (Cl. 175—183)



4. A high voltage tester and indicator comprising a transparent supporting tube of insulating material, a first contact secured to one end of the supporting tube to be subjected to the high voltage potential, a second contact secured to the other end of the supporting tube to be subjected to ground potential, a washer of insulating material carried in the supporting tube and engaging the first contact to form a spark gap, a metallic cap carried in the supporting tube and engaging the washer, a gas tube carried in the supporting tube, a spring for electrically connecting the cap to one end of the gas tube, a second gas tube carried in the supporting tube, a spring connecting one end of the second gas tube to the other end of the first gas tube, a spring connecting the other end of the second gas tube to the second contact, an indicating strip secured in the supporting tube by the metallic cup and the second contact, and resistance material on the indicating strip throughout a portion of its length to be engaged by the spring connecting the first and second tubes and by the second contact.

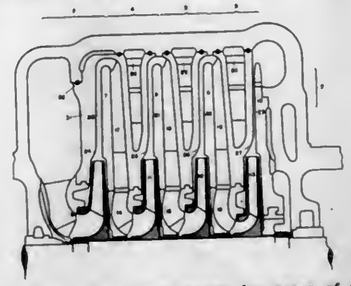
2,474,074
APPARATUS FOR CONTINUOUSLY PREDICTING TRENDS IN OBSERVED DATA
David E. Sunstein, Elkins Park, Pa., assignor to Philco Corporation, a corporation of Pennsylvania
Application April 28, 1945, Serial No. 590,811
8 Claims. (Cl. 177—311)

1. In a system for production control, means for testing devices being manufactured for a predetermined characteristic and for classifying each of said devices tested into one of a plurality of groups, each group representing numerical differences of the tested characteristics of the devices, a distribution curve producing mechanism, a storage mechanism for indicating the particular sequence of groups into which the characteristics of the tested device falls, means for operating both said mechanisms under control of said testing means, and means controlled by said storage mechanism and operative after a predetermined number of tests have been made for deleting from said curve producing mechanism the portion of the curve produced by the earliest reading affecting the curve.



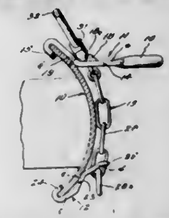
2,474,075
WELDING APPARATUS
Hyrum M. Talley, Alhambra, Calif.
Application May 7, 1948, Serial No. 25,730
5 Claims. (Cl. 219—8)

1. A welding apparatus comprising supporting means on which the work is adapted to be positioned, means for rotating the supporting means about a vertical axis, a resilient arm pivotally mounted adjacent the supporting means for swinging movement downwardly and toward the axis of rotation of the work, means providing a stop against which the arm rests in operating position, the resiliency of the arm permitting



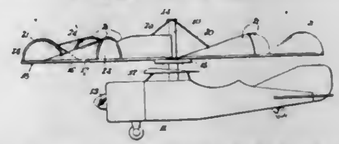
the arm to be sprung toward the work to a position beyond that permitted by the stop when the arm is unsprung in drawing an electric arc, a hopper carried by the arm adapted to contain flux to be discharged therefrom against the work, and means for feeding a welding electrode through the hopper and the flux therein.

2,474,076
DISPENSING CONTAINER
Claude H. Thompson, Binghamton, N. Y.
Application December 17, 1946, Serial No. 716,703
7 Claims. (Cl. 312—39)



1. A dispensing container for a roll of paper and like strip material, comprising a one-piece container body having a front wall, end walls integral with the front wall, attaching tabs integral with the end walls providing for attachment of the container body to a vertical supporting surface which serves to close the rear of the container body, and a bottom wall integral with said front wall and being inclined upwardly in its rear edge portion so as to bear against the front faces of the attaching tabs and thereby derive support from said tabs.

2,474,077
COMPRESSOR WITH INTERCHANGEABLE STAGE ELEMENTS
William E. Trumpler, Olean, N. Y., assignor to Carrier Corporation, Syracuse, N. Y., a corporation of Delaware
Application January 15, 1945, Serial No. 572,870
3 Claims. (Cl. 230—130)

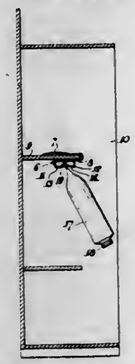


1. A centrifugal compressor for gases of the character described including a plurality of stages of compression, each stage occupying an equal distance within the casing of the compressor, removable diaphragm assemblies for the respective stages, a fixed diffuser wall serving as an outer wall for the diffuser passage of one stage and as an outer wall for the inlet passage of the succeeding stage, each diaphragm assembly in any stage being removable and replaceable by a diaphragm assembly of different conformation, the distance between diffuser walls of any two adjacent stages remaining the same regardless of changes in diaphragm assemblies.

2,474,078
ADJUSTABLE HITCH CLAMP
Earl Wilcox, Jr., Grand Junction, Colo.
Application August 21, 1947, Serial No. 769,948
2 Claims. (Cl. 280—33.44)

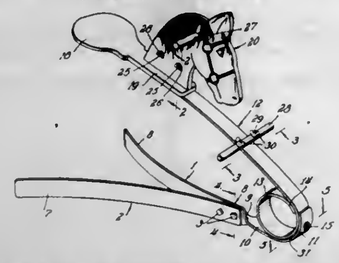
1. An adjustable tow clamp comprising a pair of jaw members, each of said jaw members being in the form of a relatively long plate having a portion of one end turned back to form a hook, one of the jaw members at its other end being formed to provide an eye for the attachment of a tow line thereto, the said one of the jaw members being bent transversely intermediate its ends to provide two obliquely angled portions, a slot formed in and extending longitudinally of the said one of the members, a chain connected at one end with the other one of the members, a relatively long threaded bolt connected to the other end of the chain and extending through said slot, a shoulder block disposed transversely of the said one of the members in the angle between the two portions, the shoulder block having an opening therethrough for the reception of said bolt, and a nut threaded upon the bolt and bearing against the shoulder block.

2,474,079
ROTATING WING FOR AIRCRAFT
Christopher R. Wilson, Philadelphia, Pa., assignor of one-half to Harry Waldman, Philadelphia, Pa.
Application September 8, 1944, Serial No. 553,223
1 Claim. (Cl. 170—135)



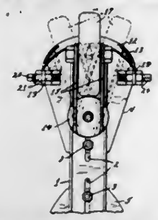
An aircraft wing comprising radial struts, concentric rings supported by said struts and constituting a frame, a plurality of scoops mounted on said frame in spaced relation, said scoops each including a top comprised of rigid outer, inner and end walls with pliable sides connected to the top and their respective rings, said top being hingedly connected at the rear to the frame, toggle levers connected to the forward ends of the scoop tops and to the frame, and means to raise and lower the forward ends of said tops.

2,474,080
HOLDER FOR COLLAPSIBLE TUBES
George W. Witte, Philadelphia, Pa.
Application May 4, 1945, Serial No. 592,019
1 Claim. (Cl. 248—108)



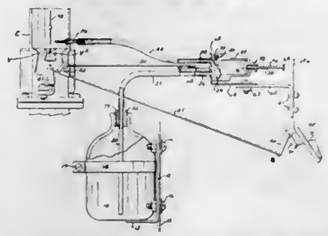
A holder for collapsible tubes comprising upper and lower horizontally spaced legs constituting a

spring clamp and being bendable whereby a vertical extension may be formed from the free end of the upper leg, a pair of arms depending from the lower leg of said spring clamp and a jaw projecting inwardly from each arm, one of which is horizontal and the other slightly inclined where-



by the inner edge thereof is normally above the horizontal one to provide a normally open mouth between said jaws, the movement of the inclined jaw towards alignment with the companion jaw tending to close the mouth.

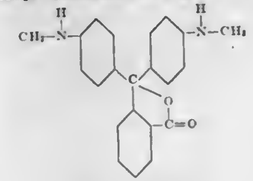
2,474,081
ONE-PERSON SEESAW
Morris D. Wolf, Chicago, Ill.
Application August 17, 1945, Serial No. 610,969
3 Claims. (Cl. 272—55)



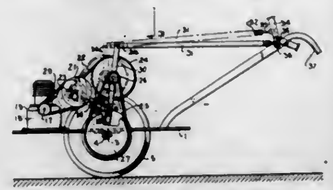
2. In a toy, the combination of a base comprising two base members of flat metal spring stock having their widths disposed vertically and secured together forwardly in face-to-face and correspondingly lineally extending relation and diverging horizontally and rearwardly from the region at which they are secured together to form the base, one of said base members extending and being twisted forwardly of said region to dispose the width of its forward portion horizontally and having said forward portion curved lineally and facewise thereof upwardly into a part coil, and a spring bar of flat metal spring stock having its width disposed horizontally and carrying a seat rearwardly thereon and having its forward end portion curved lineally and facewise thereof and downwardly therefrom into the form of a coil engaging underneath the adjoining portion of the spring bar, said spring bar coil being seated in said part coil with said spring bar extending from the top of said spring bar coil upwardly and rearwardly over said base and being secured with said part coil in the region of the extending end of said part coil with said spring bar extending as aforesaid.

2,474,082
SKATE
John Wutz, Chicago, Ill.
Application March 29, 1946, Serial No. 658,315
1 Claim. (Cl. 280—11.19)

A skate comprising a chassis, means for supporting the same on a shoe, a front truck bracket rigidly secured to the chassis, wheels supported thereon, a ball bearing caster bracket supported on the rear portion of the chassis, a rear wheel supported on the caster bracket, brackets secured on opposite sides of the rear portion of the chassis, and adjustable means carried by the brackets and positioned on opposite sides of the caster bracket in position to be contacted thereby to limit the swinging movement thereof.



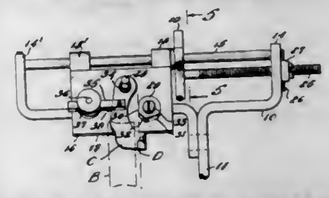
2,474,083
AUXILIARY CHARGING DEVICE FOR INTERNAL-COMBUSTION ENGINES
Merritt A. Zimmerman, Cleveland, Ohio, assignor to Associated Laboratories, Inc., Cleveland, Ohio, a corporation of Ohio
Application September 9, 1946, Serial No. 695,584
4 Claims. (Cl. 261—18)



3. An auxiliary fluid injector for an internal combustion engine, comprising a container for liquid, an injector nozzle extending into the carburetor, a reciprocating pump and tubular connections between the container and pump and between the pump and nozzle, means rigidly mounting the pump with relation to the carburetor, the pump having an actuating rod extending outside the pump and movable axially toward and away from the carburetor, a yoke member bridging across said actuating rod and movable with relation thereto and connected therewith for reciprocating the rod, a link attached to said yoke member and adapted to be connected to the usual throttle rod for the carburetor, a spring for moving the pump rod in one direction to inject fluid when the throttle rod yoke and link are moved, means for returning the pump rod in counter movement, and clamping means adjustable along the throttle rod and to which said link is connected whereby movement of the carburetor throttle actuates the pump to force liquid under spring pressure into the injector nozzle.

2,474,084
SECONDARY AMINES OF 3,3 BIS (P-AMINOPHENYL) PHTHALIDE
Clyde S. Adams, Yellow Springs, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
No Drawing. Application April 12, 1945, Serial No. 588,077
5 Claims. (Cl. 260—344.6)

5. The secondary amine 3,3 bis (p-methylaminophenyl) phthalide having the structure

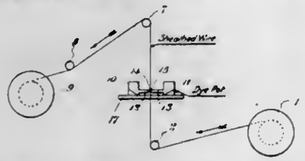


2,474,085
TRACTOR DRIVE MECHANISM
Glenn Albright, Detroit, Mich.
Application February 13, 1946, Serial No. 647,232
2 Claims. (Cl. 180—70)

1. In a vehicle drive mechanism, a frame, a power plant mounted on said frame, a traction wheel supporting the frame, an arm upstanding from and pivoted substantially at the axis of the traction wheel, a second arm pivoted on and forwardly extending from the first-mentioned arm, a shaft journaled on the forward portion of the second arm, a driven pulley on said shaft, a driving pulley mounted on and driven by the power plant, a belt forming a drive connection from the driving pulley to the driven pulley, a shaft journaled on said upstanding arm, a chain establishing a drive to the last-mentioned shaft from the first mentioned shaft, a chain establishing a drive from said chain-driven shaft to the traction wheel, means for regulating the length of said upstanding arm to adjust the tension of the last-mentioned chain, means for pivotally adjusting said upstanding arm to regulate the tension of said belt, and means for pivotally adjusting said forwardly projecting arm to regulate the tension of the first-mentioned chain.

2,474,086
BREAKER POINT REFACING DEVICE
Hiram C. Bartlow, Sr., New York, N. Y.
Application July 3, 1947, Serial No. 758,913
3 Claims. (Cl. 51—125)

2. In a device for grinding and trueing breaker points, a base, a grinding wheel mounted for rotation on said base, a rod supported by said base, a carriage mounted on said rod for pivotal swinging and longitudinal reciprocatory movements, said carriage including a plate having an upwardly projecting stud for receiving the apertured ends of breaker point arms with the arms disposed upon said plate and having a cam element affixed thereto and provided with cam faces corresponding to the cam of the distributor head which actuates said breaker point arms when in use, said breaker point arms being adapted to be rotated on said stud to align the breaker points thereof with one of the cam faces of said cam element, clamping means for securing said breaker point arms in aligned position on said plate, a screw affixed to said carriage for imparting reciprocatory movement thereto to thereby move the breaker points into engagement with said grinding wheel when the carriage is swung towards the wheel.



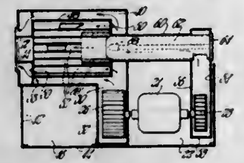
2,474,087
PREPARATION OF SILICON HALIDES
Arthur J. Barry and John W. Gilkey, Midland, and Lee De Pree, Holland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application May 16, 1947, Serial No. 748,646
5 Claims. (Cl. 260—448.2)

1. The method which comprises reacting a halohydrocarbon of the group consisting of alkyl halides and aromatic halohydrocarbons and a polyhalopolysilane containing a silicon-silicon linkage, all valences of the silicon atoms which are not satisfied by such linkage to other silicon atoms being taken up by halogen atoms, in liquid phase at a temperature above 100° C. to produce a polyhalomonosilane, containing a monovalent organic radical attached to the single silicon atom in the molecule through a carbon-silicon bond.

2,474,088
STRIPING OF VINYL RESIN COATED WIRES WITH KETONE DYE SOLUTIONS
Richard J. Brown, Hastings on Hudson, N. Y., assignor to Anaconda Wire and Cable Company, a corporation of Delaware
Application November 15, 1944, Serial No. 563,542
2 Claims. (Cl. 8—4)

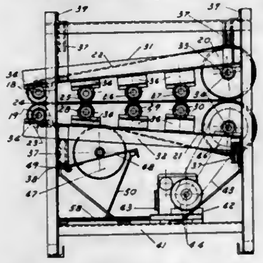
1. The method of applying at least one identifying colored stripe to the exterior of a sheath of resinous material from the class consisting of polyvinyl chloride and copolymerized vinyl chloride-vinylacetate resins surrounding a wire, which comprises applying to the exterior of the sheath a stripe consisting of a highly volatile liq-

uid ketone in which the resinous sheath is soluble and which contains in solution an organic dye, maintaining the sheath in contact with the solution for only a sufficient period of time to effect the penetration of the solution and dye into a thin surface layer at the exterior of the sheath



along the stripe, and evaporating the ketone from the solution substantially completely within three to five seconds after the solution has been applied to the sheath, thereby forming a sharply defined colored stripe at the surface of the sheath while leaving the remainder of the sheath unaffected by the dye.

2,474,089
PRODUCTION OF AMMONIA SALTS OF MALEIC ACID
Boyce G. Carson, Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 18, 1946, Serial No. 697,824
8 Claims. (Cl. 260—537)

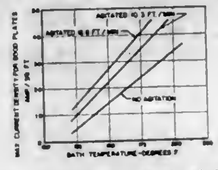


1. The process of manufacturing ammonium salts of maleic acid which comprises agitating a subdivided mass of solid maleic acid, maintaining the temperature of the mass below the temperature where subdivided maleic acid agglomerates, and passing ammonia gas derived by volatilization of liquid ammonia into contact with the maleic acid until non-hygroscopic ammonium salt of said acid is formed.

2,474,090
MULTIPLE TUBE FORCED-DRAFT AND AIR FLOW AIR HEATER
George Irving Carter, Longmeadow, Mass., assignor to Harvey-Whipple, Incorporated, Springfield, Mass., a corporation of Massachusetts
Application December 4, 1944, Serial No. 566,543
3 Claims. (Cl. 126—109)

1. Heating apparatus for securing to the ceiling comprising in combination, connected together adjacent and opposite side and end walls forming an air chamber, connected together adjacent and opposite side and end walls within the said chamber spaced from the walls thereof forming a horizontal combustion chamber and an air space therearound, an outer air flue extending from one end wall of the air chamber and an inner flue therein and spaced therefrom extending from an adjacent end wall of the combustion chamber forming an air space between said flues leading from said air chamber, an air tube for a fuel nozzle extending through the other end wall of the air chamber and through the air space into an adjacent end of the combustion chamber and having an outer end spaced outwardly from the other end wall of the air chamber, a plurality of horizontal tubes extending between opposite end walls of and passing through the combustion chamber having open ends in communication with said air space, and means for delivering air to the air chamber, and separate means for delivering air to said air tube.

2,474,091
MACHINE FOR PROCESSING STORAGE BATTERY PLATES
Melvin F. Chubb, Joplin, Mo., assignor to The Eagle-Picher Company, a corporation of Ohio
Application February 25, 1944, Serial No. 523,933
4 Claims. (Cl. 34—71)

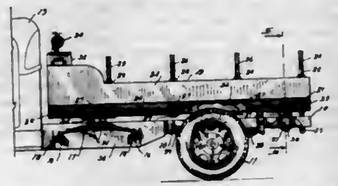


1. A battery plate processing machine comprising a frame, upper and lower cross members within said frame, a pair of larger rolls arranged to form a nip at one end of said frame and rotatably supported by the latter, a pair of smaller rolls arranged to form a nip at the opposite end of the frame and rotatably supported by the latter, an absorbent fabric belt disposed about each roll pair comprising a larger and a smaller roll, said belts being arranged to run in a parallel abutting relation for a substantial part of their travel, two spacing beams separating each larger and smaller roll at opposite sides thereof, bearing surfaces for said rolls in the end portions of each of said spacing beams, two series of pressure-increasing rolls supported by each pair of spacing beams and each series making contact with one of said belts at the parallel running portion thereof, and a plurality of floating mountings arranged cooperatively on the cross members of the frame and substantially the ends of the spacing beams whereby to anchor each assembly of spacing beams, rolls and belt against horizontal movement but free to allow limited vertical movement and easy removability of each assembly from the frame.

2,474,092
COMPOSITION FOR AND METHOD OF ELECTRODEPOSITION OF LEAD
Andrew W. Liger, Westboro, Mass., assignor, by mesne assignments, to Battelle Development Corporation, Columbus, Ohio, a corporation of Delaware
Application October 11, 1943, Serial No. 505,824
5 Claims. (Cl. 204—53)

5. The process which comprises electrodepositing lead from an aqueous alkaline solution containing alkali metal plumbite in concentration

equivalent to about 6 oz./gal. of PbO and about 0.03 oz./gal. of a betaine selected from the group

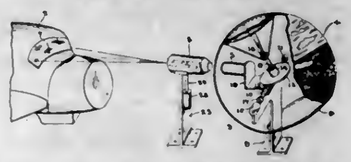


consisting of trimethyl-c-cetyl alpha-betaine, trimethyl-c-decyl alpha-betaine, and dimethyl-N-lauryl alpha-betaine.

2,474,093
METHOD OF PLASTICIZING KNITTED GOODS MADE FROM THERMOPLASTIC YARN
Albert Edward Collidge, Edwin Charles Dawes, and Thomas Archibald Gilbert, London, England, assignors to The Klinger Manufacturing Company Limited, London, England, a British company
Application July 31, 1944, Serial No. 547,408
In Great Britain May 2, 1944
4 Claims. (Cl. 223—60)

1. A process for plasticizing knitted articles made from thermoplastic yarns which process consists in passing the articles over and on to formers each of which provides a continuous black body surface to underlie the article to be plasticized on the formers, and subjecting the articles on their black-body formers to externally applied radiant heat.

2,474,094
COMBINATION WATER TANK AND TRUCK BODY
Odie Colquitt, Denver, Colo., assignor to Patents, Inc., Denver, Colo., a corporation of Colorado
Application August 27, 1946, Serial No. 693,355
2 Claims. (Cl. 280—5)

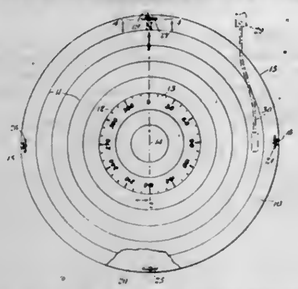


1. Means for mounting a tank on an automotive chassis comprising: a vertical side plate secured to each side of the forward portion of said chassis and extending therebelow; a pair of spaced-apart spring brackets secured to and projecting outwardly from each of said side plates; a leaf spring secured to and extending between each pair of brackets, said leaf springs being arched upwardly; a spring rest secured to each side of said tank adjacent the forward extremity thereof, each spring rest being secured to the mid-portion of one of said springs; and cushion means supporting the rear of said tank from said chassis.

2,474,095
PRODUCTION OF POLYVINYL KETALS
William Robert Cornthwaite and Nestor Winston Flodin, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 27, 1944, Serial No. 565,400
6 Claims. (Cl. 260—66)

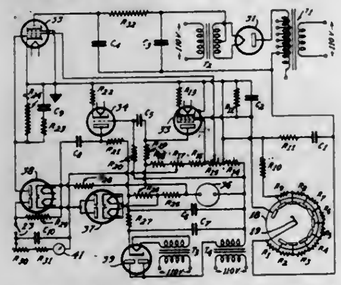
1. A process for the production of a ketal which comprises mixing, in the presence of an acid catalyst, as the sole reactants, a vinyl alcohol-containing polymer and a diketone taken from the group consisting of diacetyl, acetyl acetone, and acetonyl acetone, the diketone being present in excess of the theoretical amount necessary to react with the said polymer, and heating the mixture at a temperature between 50° C. and 250° C., whereby a yield of about 50% of polyvinyl ketal containing an unreacted aliphatic ketone group may be obtained in a reaction period of four hours.

2,474,096
OPTICAL TRAINING APPARATUS
Richard C. Dehmel, Summit, N. J.
Application April 17, 1945, Serial No. 588,788
4 Claims. (Cl. 35—12)



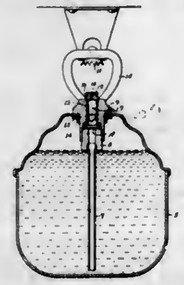
2. Aircraft training apparatus comprising an element having a spherical surface presenting a terrestial scene, means for moving said element in a direction representing pitch, means for moving said element in a direction representing turn, a source of illumination adjacent to said element, projection apparatus associated therewith, means for operating said projection apparatus independently of said terrestial scene element to represent roll, and a screen upon which a portion of said scene is projected.

2,474,097
CHART HOLDER
Richard Carl Dehmel, Summit, N. J.
Application May 21, 1946, Serial No. 671,278
1 Claim. (Cl. 346—137)



In recording apparatus, a recorder chart holder for a replaceable semi-flexible chart, said chart having a continuous central surface and having positioning notches at the periphery thereof, comprising a plate-like support having a flat bearing surface, and a plurality of pin-like elements mounted in fixed spaced relation on said surface around the periphery of said support constituting the sole means for orientating, driving and snugly holding said chart in position, said elements each comprising a T-shaped structure arranged so that the leg of the T is secured in upright relation to said support and corresponds in cross-sectional shape to the corresponding chart notch so as to fit

snugly therein for orientating and driving said chart, and the flange of the T at its opposite ends overhangs the chart material so that the clearance between said flange and the support surface corresponds to the thickness of the chart material



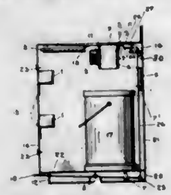
for holding said chart snugly against said support surface whereby the flange holds said chart so that it lies flat and smooth against said holder and is precluded from wrinkling under chart operating conditions.

2,474,098
PHOTOMETRIC MEASUREMENT OF LIGHT VALUES USING AUTOMATIC GAIN CONTROL IN PHOTOMULTIPLIER TUBES
Glenn L. Dimmick, Indianapolis, Ind., assignor to Radio Corporation of America, a corporation of Delaware
Application March 29, 1946, Serial No. 657,974
3 Claims. (Cl. 88—14)

1. Apparatus for comparing light values received from a standard and from a test sample comprising a multistage photomultiplier tube including a photosensitive cathode, an anode and a plurality of dynodes, means for directing pulses of light alternately from said standard and from said sample to said cathode, means including a measuring circuit connected to said anode for measuring the relative intensity of the light pulses received from said test sample, means for applying potentials to each of said dynodes, means synchronized with the pulses received from said standard for varying the potentials on said dynodes such that the gain of said tube varies in inverse ratio to the intensity of light received by said cathode from said standard, and means for maintaining the value of said gain constant during the time light pulses are directed from said sample to said cathode.

2,474,099
FIRE EXTINGUISHER
Howard Waters Doughty, Amherst, Mass., assignor to Firetox Company, Holyoke, Mass., a corporation of Rhode Island
Application September 9, 1947, Serial No. 772,969
2 Claims. (Cl. 169—26)

1. In an automatic fire extinguisher adapted to release a fire extinguishing liquid under pressure generated by increase in temperature in the vicinity of the extinguisher to a predetermined point, a metallic receptacle for the fire extinguishing liquid and a pressure generating agent, a distributor head having a discharge passage extending therethrough, a thin metallic diaphragm sealing said passage and adapted to be ruptured by increase in the surrounding temperature and the resulting pressure developed in the container, a tube extending into and affording an outlet for the fire extinguishing liquid, one end of the tube bearing against the diaphragm and holding it in position to seal the passage through the distributor head, the tube being of electrically non-conducting material whereby electrolysis between the diaphragm and the tube is substantially inhibited.



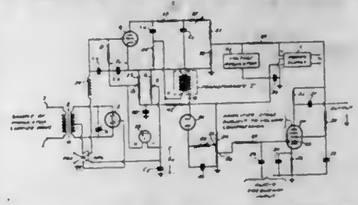
2,474,100
ICE DISINTEGRATING UTENSIL
Frank W. Earnest, Jr., Wilkes-Barre, Pa.
Application March 18, 1948, Serial No. 15,522
1 Claim. (Cl. 241—168)

A hand tool for disintegrating ice cubes into relatively small fragments, comprising a rigid hand grip to be held by the user, a relatively massive spheroidal impact member forming an impact point focus area, and an elongated handle forming a rigid connection with said grip and with said impact member, and medially alined with said focus point area, said handle being formed of flat spring metal to vibrate flatwise rapidly in response to oscillation imparted to said handle by the user, whereby a succession of closely spaced taps are produced on an ice cube to cause disintegration thereof.

2,474,101
KITCHEN CABINET HAVING TOP OPENING WITH PEDAL OPERATED CLOSURE
Harry A. Frothingham and Harriett C. Frothingham, Stamford, Conn.
Application April 9, 1946, Serial No. 660,702
1 Claim. (Cl. 312—192)

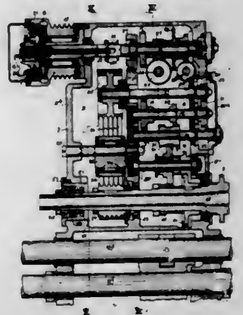
In a kitchen unit, the combination of a cabinet having side walls and a bottom and having a closed base below its bottom, a door hinged on the cabinet and covering its entire front, a top to the cabinet having an opening in the center of pitched drains leading into said opening, a funnel leading from the bottom of said opening, a hinged cover mounted over said opening, a garbage container encased in said cabinet directly beneath said funnel, a foot operated fulcrumed lever mounted in said space between the bot-

tom and base of said cabinet and hingedly connected to a push rod at the base of said push rod, a toggle connected to the upper end of said push rod, the other end of said toggle being connected by a hinge to a lever extending from an edge of said hinged cover and a spring connected at its lower end to a bracket supporting the upper end of the push rod and the other end of the spring being secured to the push rod.



2,474,102
STOVE MAT
Benjamin Gershon, Chicago, Ill.
Application October 8, 1945, Serial No. 620,958
4 Claims. (Cl. 45—68.4)

3. A mat-like article of the class described including a sheet member having a plurality of corners and a pair of marginal flanges adjacent each corner thereof which are adapted to be folded back upon said sheet member and pressed into permanently folded relationship therewith, said flanges of each pair being formed to have their adjacent marginal edges disposed in obtuse relationship with one another prior to the folding thereof, and a separate angle-shaped insert member for each of said corners, each of said insert members being formed from a unitary rod of spring-like material to have a central portion and leg portions on the opposite ends thereof, said central portions consisting of loops which are sharply bent out from the inner ends of their attached leg portions so as to provide spaced notches therebetween which receive the adjacent portions of each pair of said flanges, said leg portions being tensioned inwardly by said folded flanges so as to be locked firmly within the folds.



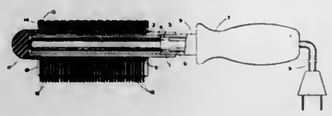
2,474,103
SYSTEM FOR VOLUME COMPRESSION
George K. Graham, Oceanside, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application October 27, 1944, Serial No. 560,679
9 Claims. (Cl. 332—38)

1. In a modulated carrier wave signaling system in combination with a variable gain amplifier, means including a circuit device coupled to a transmission line in said system and responsive to variations in the modulation level of signals transmitted through said line for controlling the gain in said amplifier, said device including apparatus for rectifying a component of the modulated carrier wave energy and a gaseous discharge tube having circuit parameters such that it becomes ignited by failure of said energy component to maintain a predetermined negative bias on its input circuit when such failure is accompanied by the impress of a critically high cathode-anode voltage on its output circuit, said apparatus also including two resistively interconnected

capacitors of different capacitive ratings and a discharge circuit for the smaller of the two capacitors through the ionization path of said tube, the smaller capacitor being chargeable from the larger capacitor up to a voltage sufficient to ignite said tube, a direct current source, an impedance circuit connected across the terminals of said source and including the larger capacitor for charging the same, and means for rectifying a derivative of the discharge current from the smaller capacitor and applying the same to vary the gain in said amplifier and to produce volume compression therein only when the modulation level exceeds a predetermined percentage.

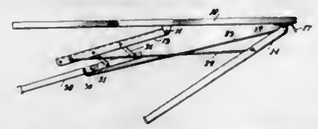
2,474,104
DRIVE MECHANISM FOR AUTOMATIC LATHES
William F. Groene, Cincinnati, and Harry C. Kemper, Goshen Township, Clermont County, Ohio, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Original application February 10, 1943, Serial No. 475,342. Divided and this application August 23, 1944, Serial No. 550,776
13 Claims. (Cl. 74—640)

1. In a headstock for lathes, a two compartment casing, a drive shaft journaled in said cas-



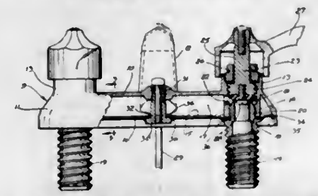
ing, a work spindle in said casing, a belt drive in one compartment of said casing connecting said shaft and spindle and including a pulley on said spindle, a gear drive in the other compartment connecting said shaft and spindle bearings in said casing journaling said spindle on both sides of said pulley, and a demountable means carrying one of said bearings in the casing so as to provide a space around said spindle through which belts on said pulley may be removed and replaced when said means is demounted.

2,474,105
APPARATUS FOR CASTING DENTAL RESTORATIONS
Irving Hordes, Yonkers, N. Y.
Application April 19, 1947, Serial No. 742,696
6 Claims. (Cl. 18—5.7)



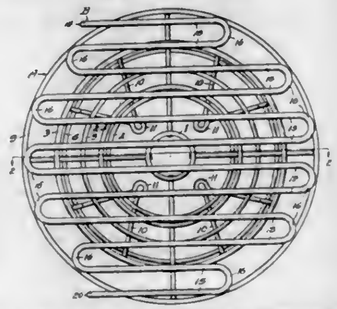
1. In apparatus of the character described, a disc member having a central screw threaded opening, cavity and sprue forming members on said disc member consisting of a hollow metal cylindrical member having a restricted opening at one end, a cylindrical member inside of said hollow member and having a central passage, a tapered slitted neck portion projecting outwardly through said restricted opening and a screw threaded portion projecting outwardly through the other end of said hollow member, a pin detachably mounted in said passage and projecting outwardly of said neck portion and a wax pattern on the projecting end of said pin, the screw threaded portion of said inner cylindrical member being adapted to coact with the screw threaded opening of said disc member for moving said inner cylindrical member lengthwise of the hollow member and the diameter of said restricted opening being so proportioned relative to said tapered neck whereby said tapered slitted neck portion is contracted and pressed into gripping relation with said pin.

2,474,106
HEATING AND PRESSING COMB
Herman F. Jackson and Thomas F. Spencer, Detroit, Mich.
Application April 17, 1948, Serial No. 21,738
5 Claims. (Cl. 132—14)



5. A grooming device comprising a tubular supporting member, electric heating means in said member, a plurality of sheet material teeth rigidly mounted on said supporting member, and a pressing pad surrounding said teeth.

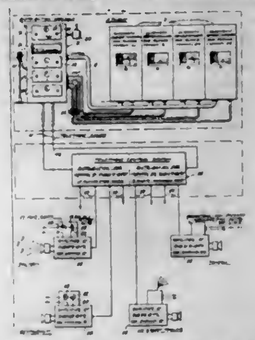
2,474,107
FOLDING SUPPORT FOR IRONING BOARDS, AND THE LIKE
Udo K. Johannsen, Cortland, N. Y., assignor to Brewer-Titchener Corporation, Cortland, N. Y., a corporation of New York
Application July 26, 1945, Serial No. 607,224
2 Claims. (Cl. 38—117)



2. A folding table including in combination a deck, a leg pivotally connected at its upper end to the underside of said deck and in one extreme position extending downwardly and outwardly with respect to said underside, said leg including an upper and a lower portion, links of substantially similar lengths each having one end pivotally connected to the upper of said portions at points spaced in the length of the latter and with their opposite ends similarly connected to the lower of said portions, said links and leg portions all projecting in directions parallel to each other in said one extreme leg position, means for preventing the movements of said links and portions beyond such parallel direction, said leg in its opposite extreme position extending substantially parallel and beside the under face of said deck and with the lower leg portion having the major part of its body disposed adjacent the body of the upper portion, a second leg also pivotally secured to the underside of said deck at a point spaced from the pivot of said first leg, a pair of rods, one having one end pivotally connected to the lower of said first leg portions, its opposite end being connected substantially in line with the pivot of said second leg and the other of said rods having one end pivotally connected to the second leg at a point spaced from the pivot thereof, its body crossing said one rod and having its opposite end pivotally connected to the uppermost of said leg portions whereby as said second leg is swung around its pivot the portions of said first named leg will be moved from one to the other of said extreme positions.

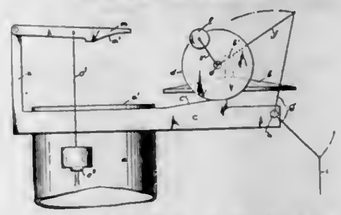
2,474,108
MIXING SPOUT FIXTURE FOR WASHBASINS
Abraham Kadish, Long Island City, N. Y.
Application September 19, 1946, Serial No. 697,893
5 Claims. (Cl. 137—111)

4. In a plumbing fixture, an elongated hollow casing having an open side, a tubular boss located within and adjacent each end of said casing and formed integrally therewith, a plate secured to said casing closing the open side thereof to form a mixing chamber within the casing, said plate engaging said bosses and having openings in alignment with the openings through said bosses, said bosses having apertures leading into said mixing chamber, and nipples extending through said openings in said plate and secured in the outer ends of said bosses and having valve seats at the inner ends thereof for admitting hot and cold water to said mixing chamber through the apertures in said bosses.



2,474,109
REFRIGERATED FAN GUARD
Nellie G. Keller and William J. Keller, St. Louis, Mo.
Application July 30, 1946, Serial No. 687,084
1 Claim. (Cl. 257—259)

An evaporator coil adapted to be mounted upon and fixed to the front face of an electric fan guard, said coil comprising a single length of tubing formed to provide spaced straight horizontal runs of various lengths on opposite sides of the horizontal centerline of the evaporator, said runs connected at their ends by curved bends, and the horizontal runs adjacent the curved bends being curved rearwardly to arrange the curved bends to lie in a circular outline to the rear of the spaced straight horizontal runs.

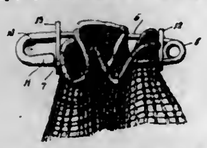


2,474,110
CENTRALIZED MUSIC TRANSMISSION SYSTEM
Samuel K. Lackoff, Astoria, N. Y., assignor to Telomatic Products, Inc., Passaic, N. J., a corporation of New Jersey
Application November 25, 1946, Serial No. 712,217
15 Claims. (Cl. 179—6)

1. A music reproduction system comprising a distribution console provided with an automatic selector for selecting pre-arranged program music of different types at preselected intervals, an automatic record changer connected to said automatic selector and operable to reproduce the pre-arranged program of the type as selected by said automatic selector, a distribution amplifier carried by said console and conected to said automatic record changer for amplifying and distributing the reproduced music from the latter and of the type selected at any moment by said automatic selector over a single telephone line channel to local subscriber stations, an emergency amplifier carried by said console and connected to said distribution amplifier and adapted to automatically and instantaneously operate upon failure of said distribution amplifier to amplify and distribute the reproduced music at the moment supplied by said automatic record changer to said distribution amplifier, and means comprising a firing arrangement forming part of said distribution amplifier and connected to said

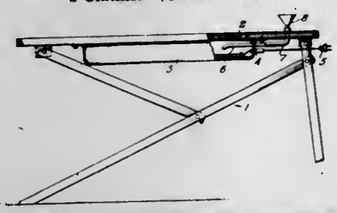
emergency amplifier for operating the latter upon failure of said distribution amplifier for any reason.

2,474,111
STACK VALVE OF WATER GAS GENERATORS AND THE LIKE
Frank Alexander MacGregor, Westminster, England, assignor to Humphreys & Glasgow Limited, Westminster, England
Application July 24, 1945, Serial No. 606,778
In Great Britain August 9, 1944
7 Claims. (Cl. 48—87)



1. A stack valve which is carried by wheels running on tracks extending laterally alongside the stack and wherein an arm that is fixed to an axle on which the wheels are mounted is jointed to a bell crank and has the valve jointed to it intermediate of the axle and bell crank, other arms being fixed at an angle to the arm carrying the valve and in such relation to loaded levers formed with cam paths that, during the latter part of the valve closing movement, the said arms raise the loaded levers, the angular movement of the bell crank being such that, after the valve has reached its seating, the wheels are lifted from the tracks by the arm to which the valve is jointed being caused to pivot about the pin attaching the valve to it.

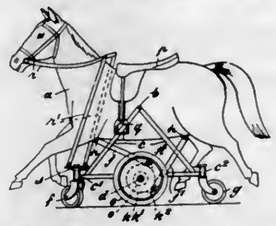
2,474,112
SAFETY PIN
Guy D. Marrocco, Brooklyn, N. Y., assignor to Carman & Co., Inc., New York, N. Y., a corporation of New York
Application June 28, 1945, Serial No. 602,059
3 Claims. (Cl. 24—150)



3. A safety pin including a pair of arms resiliently connected to each other adjacent one of

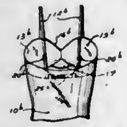
their ends, a clasp mounted by the opposite end of one of said arms, a trough portion forming a part of said clasp to receive and releasably retain the adjacent end of the second arm, a guard comprising a plate extending substantially transversely with respect to the pin axis and mounted by and against any movement with respect to said one arm at a point immediately adjacent the clasp carried by the latter, said plate being formed with a tapered recess disposed in line with said trough portion and defining between its edges a space in excess of the transverse area

of said portion, said recess being flared in the direction of the second arm and extending to the edge of said plate, and a second plate also extending substantially transversely with respect to the pin axis and mounted by and against movement with respect to said one arm, said latter plate being disposed at a point immediately adjacent the point of connection of said arms and being formed with a slot extending through to its edge and in the direction of movement of the second arm and to permanently receive the latter.



2,474,113
ELECTRIC STEAMING STAND
Lloyd I. Osipow, Bronx, N. Y.
Application May 9, 1947, Serial No. 747,041
2 Claims. (Cl. 219—40)

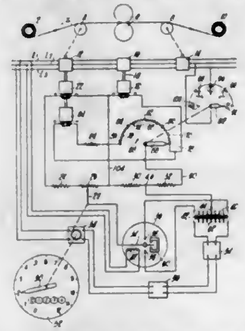
1. An electric steaming stand comprising an ironing board or other stand having a perforated or porous top to permit passage of steam, a vessel opening onto and affixed to the underside of said top, and a tube or pipe passing through a wall of the vessel and connected to a water feed, said vessel containing and being electrically insulated from an electrolyte and a pair of spaced electrodes, with means for connecting the electrodes to a source of alternating current.



2,474,114
ROCKING HORSE
Jack Ransom, Cardiff, Wales, assignor of one-third to Eric Sanders, Dunnington, and one-third to Ernest Geoffrey Helliwell, Tettenhall, England
Application December 22, 1945, Serial No. 636,854
In Great Britain November 17, 1945
5 Claims. (Cl. 280—1.19)

1. A self-propelled child's vehicle comprising, in combination, a wheeled base having a drive shaft journaled near its center, at least one driving wheel on said shaft, a framework erected on said base, an animal figure rockingly mounted on said framework at a point above said shaft, a uni-directional clutch comprising a driven member mounted on said shaft and driving members rotatably journaled relative to said driven member, rolling elements frictionally engageable between said driving and driven members when said driving members are rotated in a forward motion producing direction, and at least two links con-

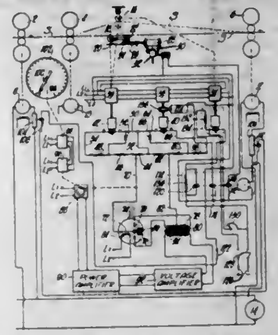
necting said figure to said driving members of said clutch, the upper ends of said links being pivotally connected to said animal figure at points spaced laterally from the point of rocking mounting of said animal figure on said framework, the lower ends of said links being pivotally connected to said driving members, whereby rocking movement of said animal figure oscillates said driving members and produces forward rotation of said driven member and motion of the vehicle.



2,474,115
PETTI-BRA SLIP
Julia Read, New York, N. Y.
Application June 7, 1946, Serial No. 675,224
3 Claims. (Cl. 2—73)

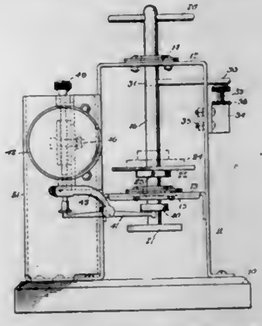
1. A garment comprising a slip, said slip including a waist covering portion and having a top edge adapted to lie above the breasts, a brassière having two cup-shaped portions for receiving the breasts and disposed inside of said slip, the top edge of the brassière being attached to the top edge of said slip, said brassière having its bottom edge free of any attachment with said slip, each of said cup-shaped portions having a slit extending from substantially the center of the cup-shaped portion through the bottom edge of the brassière, fastening means for securing the edges of said slits together and means for tensioning the brassière about the body of the wearer in tight engagement with the breasts to support the same.

2,474,116
APPARATUS FOR MEASURING DIFFERENTIAL SPEED
George H. Rendel, Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application May 12, 1948, Serial No. 26,646
2 Claims. (Cl. 235—61)



1. Apparatus for comparing the speed relationship between two moving objects which comprises means connected to be driven at a speed proportional to the speed of one of the objects, means connected to be driven at a speed proportional to the speed of the other object, a differential receiver connected to both of said means for obtaining the difference in their speeds, a tachometer generator driven by said differential receiver, a second tachometer generator driven at a speed proportional to the speed of one of the objects, a third tachometer generator connected to be driven at the same speed as the second named generator, a variable resistance in series with the second named gen-

erator, a contact arm for varying the amount of said resistance in series with the second named generator, a variable resistance in series with the first and third generators, a contact arm for the last named resistance for varying the amount of said resistance in series with the first generator, and means responsive to the difference between the voltage drop across the first named resistance and the summation voltage from the first and third generators for moving said first named contact arm to balance said voltages, the position of said contact arm when the voltages are balanced indicating the speed relationship.



2,474,117
THICKNESS GAUGE
George H. Rendel, Mount Lebanon, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application December 23, 1946, Serial No. 717,993
5 Claims. (Cl. 80—31.1)

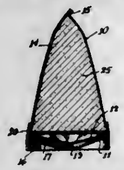
3. Apparatus for gauging the thickness of elongated strip moving between two pairs of driven work rolls or the like, said strip normally moving in a plane passing through both roll passes, but being movable out of said normal pass line during gauging, which apparatus comprises a rotatable gauging roll around an arc of which the strip is adapted to pass, a rotatable gauging roll positioned to ride on said strip at the point where the strip is in contact with said first named gauging roll, said gauging rolls being driven by said moving strip, means connected to said gauging rolls for indicating the gauge of said strip, said gauging rolls being normally located on opposite sides of the strip, said second named gauging roll being spaced from the normal pass line, means for moving said first named gauging roll from its normal position across the normal pass line to its gauging position adjacent the second named gauging roll, and means responsive to the position of the strip for operating said moving means to move said first named gauging roll to its gauging position

when the strip is passing through both pairs of work rolls.

2,474,118
COMPRESSION TESTING APPARATUS
Leslie V. Robinson, New York, N. Y., assignor to Robinson Aviation, Inc., New York, N. Y.
Application October 30, 1945, Serial No. 625,596
2 Claims. (Cl. 73—94)

2. A compression indicator comprising a platform for the material to be tested, a ram vertically movable above said platform, means for raising said ram, adjustable limiting means for controlling downward movement of said ram, a gauge for measuring linear movement, an arm interconnecting said ram with said gauge, whereby the downward movement of said ram actuates said gauge, and an adjustable support for said gauge whereby its position relative to the interconnecting means may be changed so that actuation of the gauge by the downward movement of the ram may begin at any given position of the ram.

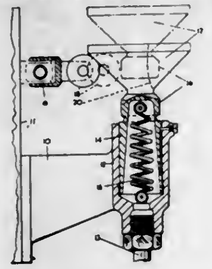
2,474,119
PLASTIC BRACE BAR SPECTACLE WITH PIVOTING LENS CONNECTIONS
John J. Rohrbach, Rochester, N. Y., assignor to Shuron Optical Company, Inc., Geneva, N. Y., a corporation of New York
Application October 26, 1945, Serial No. 624,667
7 Claims. (Cl. 88—41)



1. An ophthalmic mounting comprising a spec-

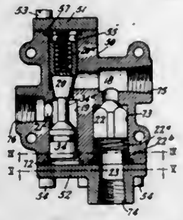
tacle front having a bridge and top arms made at least in part of plastic material, two metal plates secured to said spectacle front at opposite sides of said bridge, two metal endpieces secured to said spectacle front adjacent the ends of said top arms, temples hinged to said endpieces, said plates and said endpieces each carrying pintle supports, four separate pintles mounted one in each of said pintle supports, said pintles being located at spaced points adjacent the opposite

sides of a pair of lenses and beneath said top arms, each of said pintles having a substantially vertical journal portion, and a lens strap pivotally mounted on each of said journal portions, said pintle supports being provided with means for limiting vertical movement of said lens straps on said journal portions, and each of said lens straps having a lens-engaging portion located behind the associated pintle and adapted to contact the rear of the lens.



2,474,120
PACKAGE
Herbert Rumsey, Jr., Rochester, N. Y.
Application October 1, 1946, Serial No. 700,398
3 Claims. (Cl. 206—46)

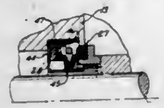
1. A container comprising a tubular envelope closed at one end and having an opening at its other end and provided with imperforate walls made of flexible sheet material, contents material disposed in the closed end and partially filling the envelope, a relatively broad flat disk disposed transversely of the envelope at the end of the contents material, said envelope being twisted around its longitudinal axis between the open end and said disk so as to provide a pair of diaphragms with a twisted portion therebetween, the inner diaphragm being stretched relatively tautly over said disk and said disk serving to keep the contents from contact with said inner diaphragm and the outer diaphragm being disposed in close proximity to the inner diaphragm, and means for retaining said outer diaphragm against rotation with respect to the remainder of the envelope.



2,474,121
CONTROL OF FUEL-INJECTION ENGINES
Arthur Freeman Sanders, Penzance, England
Application April 16, 1947, Serial No. 741,807
In Great Britain September 9, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires September 9, 1962
3 Claims. (Cl. 123—140)

1. For a fuel-injection engine, the combination with a fuel pumping unit having a main fuel control member, of a plunger having a head coacting with said member, said head having a frusto-conical portion the smaller diameter of which is adjacent an eccentric cylindrical portion, means biassing said plunger to a position in which the larger diameter of said frusto-conical portion engages said member to cut off the fuel delivery, means for applying the lubrication pressure of the engine to said plunger to

force it against the biassing means so that, when the engine is running normally, said cylindrical portion engages said member to limit the maximum fuel delivery, and means for partially rotating the plunger to control the maximum fuel delivery when the engine is running normally.



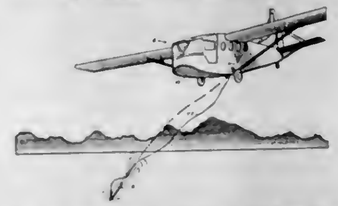
2,474,122
PILOT VALVE
Frederick W. Schneck, Santa Monica, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Original application January 11, 1946, Serial No. 640,466. Divided and this application December 17, 1947, Serial No. 792,244
1 Claim. (Cl. 137—153)

A hydraulic control valve of the type described comprising: a body member having first, second, and third longitudinal passages therein, said first and second passages extending completely through said body, and said third passage extending into said body from one end; a first closure cap secured to said one end of said body and closing all three of said passages; a second closure cap secured to the other end of said body, and closing said first and second passages; said body member having a lateral high pressure port communicating with the inner end of said third passage and with said second passage, and a lateral low pressure port communicating with said second passage at a point longitudinally displaced from said high pressure passage; a valve seat between the inner end of said third passage and said high pressure port; a check valve in said third passage adapted to close against said seat; said first cap having a discharge port therein communicating with the outer end of said third passage; a valve seat in said second passage between

the high pressure and low pressure ports therein; a poppet valve in said second passage adapted to close against the high pressure side of said seat therein; a piston in said second passage on the other side of the seat therein; said first passage being connected intermediate its ends by a control passage in said body with said second passage at the outer end of the piston therein; said first passage being connected at one end by a passage in said first cap with said discharge port, and being connected adjacent its other end to a passage in said body adapted to be connected to said lateral low pressure port; and pressure responsive means within said first passage, movable in response to pressure variations in said one end thereof for connecting the outer end of said second passage to said low pressure port in response to decrease of pressure in said discharge port below a predetermined value, and connecting said outer end of said second passage to said discharge port in response to increase of the pressure in said discharge port above a predetermined value.

2,474,123
RETAINER FOR FLUID SEALS
Carl E. Schmitz, Chicago, Ill., assignor to Crane Packing Company, Chicago, Ill., a corporation of Illinois
Application August 12, 1946, Serial No. 689,854
4 Claims. (Cl. 286—11)

1. A seal device for effecting a fluid-tight joint between relatively movable members such as a housing and a shaft passing therethrough, said seal including a sealing washer, a flexible deformable tubular sealing element having flanged ends with cylindrical inner and outer surfaces, said washer bearing against one flange to form a seal thereat, and a spring compressed between the flanges, a retainer for the seal comprising an annular shell open at one side and having cylindrical inner and outer walls and a connecting radial wall, one of said cylindrical walls being pressed against one of the relatively rotatable members so as to be held against rotation with respect to said one member, and a step formed in the outer cylindrical wall of the retainer and fitting closely over the outer cylindrical surface of the flange of the sealing element remote from the washer to center said element relative to the said one member.

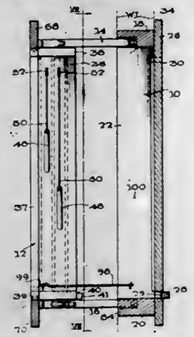


2,474,124
PARACHUTE LEADER
Arthur B. Schultz, Wilmington, Del., assignor to All American Airways, Inc., a corporation of Delaware
Application March 8, 1946, Serial No. 653,015
3 Claims. (Cl. 244—151)

1. In a parachute a canopy, shrouds connected to the peripheral edge of said canopy, one-half of said shrouds being gathered and attached to a connecting ring, the other half of said shrouds being gathered and also attached to a second connecting ring, a load supporting harness, a pair of leader assemblies longitudinally extending from each connecting ring to said harness, each leader assembly comprising a shock absorbing leader made from undrawn synthetic plastic fiber, and a substantially non-yieldable auxiliary folded leader longer when unfolded than the undrawn synthetic plastic fiber leaders, said un-

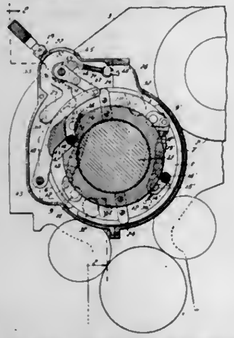
drawn synthetic plastic fiber leaders each normally when not under load being equal in length to each of the said auxiliary leaders when in folded condition.

2,474,125
VEHICLE BASED ARRESTING GEAR
Arthur B. Schultz, Wilmington, Del., assignor to All American Airways, Inc., a corporation of Delaware
Application July 2, 1946, Serial No. 681,091
6 Claims. (Cl. 244—110)



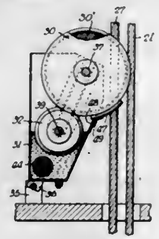
1. In vehicle based arresting apparatus, means for effecting a ground anchorage comprising a tubular guide adapted to be mounted on the vehicle to be arrested, said guide being formed with a slot at its lower end, a ground engaging spike in said tubular guide, a connecting element in the form of an ear on said spike and received in said slot, said ear being adapted to have a deceleratng line attached thereto, and an explosive charge for driving said spike.

2,474,126
REVERSIBLE WINDOW CONSTRUCTION
Wendell B. Tidwell, Norfolk, Va., assignor to Window-Frame Corporation, Norfolk, Va., a corporation of Virginia
Application June 11, 1947, Serial No. 753,986
8 Claims. (Cl. 20—52.2)



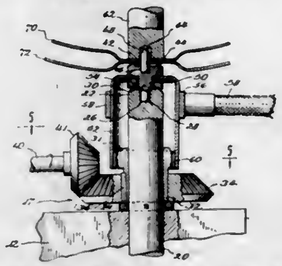
5. A reversible window construction comprising a frame adapted to be fixed in a window opening of a building; a bodily movable window sash assembly having lintel, sill and side jambs fitted within one side of said frame in sliding relation; a first horizontal trim member pivotally connected to the center of the top of the lintel for relative rotation about a vertical axis;

linkage pivotally connected by one end to the inside of the frame and having a pivotal, supporting connection with the inner face of the first trim member; a second horizontal trim member pivotally connected to the center of the bottom of the sill for relative rotation about the



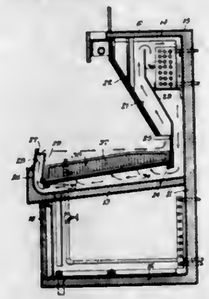
same vertical axis; and linkage pivotally connected to the inside of the frame by one end and having a pivotal, supporting connection with the inner face of the second trim member, said linkages being connected at opposite sides of the frame.

2,474,127
CLAMPING APPARATUS FOR TENSION LOCKED PRINTING PLATES
Paul L. Tollison, North Plainfield, and Charles L. Ricards, South Plainfield, N. J., assignors to Wood Newspaper Machinery Corporation, Plainfield, N. J., a corporation of Virginia
Application August 13, 1946, Serial No. 690,304
5 Claims. (Cl. 101—378)



2. In a printing plate locking device, in combination, a rotary plate cylinder, at least one plate clamping element on said cylinder movable between retracted plate releasing and extended plate clamping positions, an operating member connected to said clamping element including a cam follower extending from one end of said cylinder and movable in opposite directions to move said clamping element to its retracted and extended positions, a pair of cam surfaced members fixed against rotation adjacent the end of said cylinder, manually operable means for moving one of said cam surfaced members adjacent the other to form therebetween a box cam track for positively moving said cam follower in opposite directions during the rotation of said cylinder and for separating said cam surfaced members to prevent movement of said cam follower thereby, and means responsive to the rotation of said cylinder for moving said manually operable means to separate said cam surfaced members.

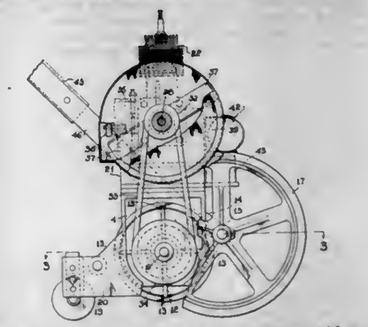
2,474,128
CABLE LUBRICATOR
John Edmund Tonnelier, New York, N. Y.
Application January 24, 1947, Serial No. 723,993
13 Claims. (Cl. 184—17)



1. In a device of the character indicated, a bath for holding lubricant, a first roller pivotally supported by said bath for partial immersion in lubricant held in said bath, and a second roller radially freely slidably supported by said bath generally above said first roller and in wiping contact with an exposed unimmersed portion of said first roller.

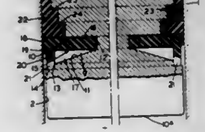
2,474,129
WELDING APPARATUS
Vernon N. Tramontini, Indianapolis, Ind., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application August 14, 1947, Serial No. 768,668
4 Claims. (Cl. 219—4)

1. A welding apparatus for making small diameter circular welds comprising a resistance welding machine, a non-rotating lower electrode mounted on said machine, a circular ridge formed axially on the welding surface thereof equal in diameter to the desired weld, means for pivotally mounting the end of said electrode opposite said welding surface on said machine, a skirt depending axially from said electrode to a point below said mounting point, a bearing surface on said skirt, a rotating eccentric bearing against said bearing surface and imparting an alternate rising and falling motion successively and continuously to each point of said ridge, means for rotating said eccentric, an upper electrode with a plane welding surface, and means for forcing said upper electrode against said lower electrode.



2,474,130
PRODUCE COUNTER
John P. Tully, Bellerose, N. Y., assignor to The Great Atlantic & Pacific Tea Company, New York, N. Y., a corporation of New Jersey
Application July 29, 1947, Serial No. 764,373
3 Claims. (Cl. 62—89.5)

1. A counter having a head frame having a chamber therein, a shelf extending forwardly from the frame intermediate its height, a partition wall in said chamber dividing the chamber into two passages connected at their tops, a cooling device in the rear of said passages, trays disposed on the shelf above the bottom thereof, said partition extending down to the rear of the trays, one of said passages extending to the rear of the shelf and the other to a point just above the rear of the trays, the front of the shelf being bent upwardly and spaced glass sheets related thereto to form an extension passage to conduct air up from below the shelf to a point adjacent and above the front of the trays.

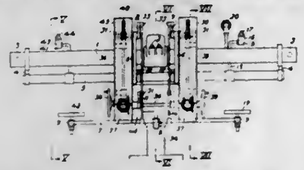


2,474,131
LAWN MOWER
Joseph Verderber and Raymond H. Liska, Cleveland, Ohio
Application August 7, 1945, Serial No. 609,428
1 Claim. (Cl. 56—26)

In a power driven lawn mower of the character described, the combination of a roller bar, a shaft in parallel spaced relationship to said roller bar, supporting wheels rotatably mounted on the ends of said shaft, a second shaft in parallel spaced relationship to said roller bar and positioned between said roller bar and said first-named shaft, cutter blades mounted on said second shaft, a pair of frame members disposed on opposite ends of said roller bar and said shafts, each of said frame members having provided thereon integrally therewith bearing portions for said roller bar and said first-named shaft and a bearing housing for said second shaft whereby to provide an integrated frame for said shafts and said roller bar, a shelf member mounted on said frame members, an engine mounted on said shelf member directly above said second shaft whereby the mass of said engine is disposed between the said supporting wheels and said roller

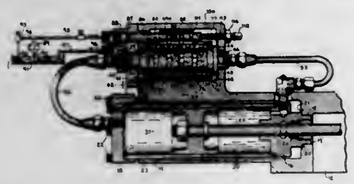
bar, and transmission means connecting said engine to said second shaft to cause rotation of said cutter blades.

2,474,132
PISTON SEALING MEANS
Sergius Vernet, Yellow Springs, Ohio
Application September 7, 1945, Serial No. 614,930
6 Claims. (Cl. 309—23)



1. In an apparatus of the character described, cooperable piston and cylinder members having a clearance space therebetween, said piston member being adapted to be driven by fluid pressure, one of said members having a circumferential groove opening into said space, a sealing ring of rubber-like material in said groove and having a narrow wiping face frictionally engaging the wall of the other of said members, said ring having a buttressing portion extending from adjacent said face on the driving pressure receiving side of said ring, said buttressing portion being spaced from contact with the wall of the other of said members and reinforcing said face against chipping.

2,474,133
MEANS FOR SUPPORTING OBSERVERS IN RANGE-FINDER SYSTEMS
Ernst von Segebaden, Drottningholm, Sweden, assignor to Arenco Aktiebolag, Stockholm, Sweden, a joint-stock company of Sweden
Application October 22, 1945, Serial No. 623,756
In Sweden November 2, 1944
8 Claims. (Cl. 88—1)

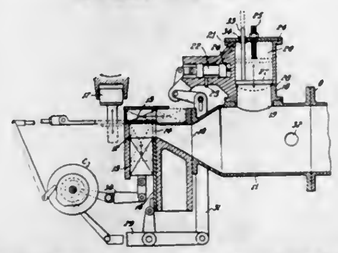


1. A range-finder system comprising a plurality of rigidly inter-connected sighting instruments swingable in elevation about a horizontal axis and each having an eye piece; a plurality of observers' supports each located below one of said eye pieces; and means for transmitting elevational swinging movements of said eye pieces

into elevational movements of said supports, said transmitting means comprising a crank arm rigidly connected to said instruments, and a linkage having a rod pivotally suspended from said arm and carrying said plurality of supports, the distances of said eye pieces from an imaginary line

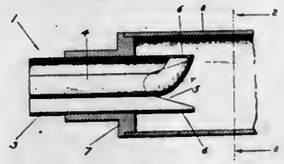
parallel to said axis and passing through the center of the pivotal interconnection of said linkage and said crank arm being substantially equal, extensions of the optical axes of said eye pieces having different altitudinal, angular directions and being located at substantially equal distances from said imaginary line.

2,474,134
HYDRAULIC TOOL CONTROL UNIT
Arthur P. Waterson, Tulsa, Okla., assignor to The R. K. LeBlond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Application April 24, 1947, Serial No. 743,689
3 Claims. (Cl. 121—41)



2. In a hydraulic control valve having a valve spindle, a series of port forming collars fixed on said spindle, a fluid pressure cylinder controlled by said valve, rigid fluid passageways between said spindle and said cylinder, a movable valve sleeve having a series of port forming collars operatively related to said first mentioned port forming collars on said spindle, and means for reciprocating said movable valve sleeve by a template.

2,474,135
ADJUSTABLE EARPIECE SUPPORT
George H. White, Hartford, Conn., assignor to The Gray Manufacturing Company, a corporation of Connecticut
Application June 5, 1947, Serial No. 752,778
9 Claims. (Cl. 179—182)



9. An earpiece comprising a support; said support having a suspending portion for engagement behind the pinna of either human ear and having a portion depending from said suspending portion for locating a receiver adjacent the outer surface of either ear; fastening means carried by said depending portion; and a receiver providing complementary fastening means releasably and reversibly interengageable with the first said fastening means whereby said earpiece is applicable to either a right or left ear, one of said fastening means including a socket providing a resilient detent, the other of said fastening means including a plug containing a recess for reception of said detent.

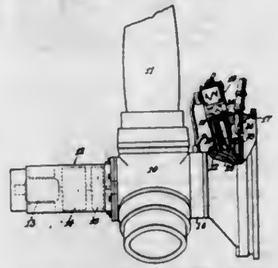
2,474,136
PACKING OF PLASTIC MATERIAL
Arthur Dacre Wilson, Grays, and William Dalziel, Birkenhead, England, assignors to Lever Brothers Company, a corporation of Maine
Application April 23, 1948, Serial No. 664,419
In Great Britain April 26, 1945
6 Claims. (Cl. 31—14)

5. An arrangement for forming prints of plastic material from a machine continuously producing said material, said arrangement comprising a die-chamber, means for cyclically opening said die-chamber to permit it to be filled and thereafter closing it, means for ejecting prints therefrom, a connection to said die-chamber from said machine, a branch on said connection for accommodating material issuing from said machine during closure of said die-chamber, a piston within said branch, a source of compressed air, and means for connecting said source to the space in said branch behind said piston while said die-chamber is open to apply pressure to the material in said connection, and for connecting said space to the atmosphere during closure of said die-chamber.

2,474,137
COUPLING SYSTEM FOR WAVE GUIDES
Kenneth A. Young, Waban, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application February 15, 1944, Serial No. 522,481
12 Claims. (Cl. 178—44)

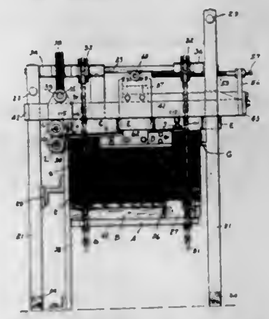
1. A coupling system comprising a coaxial conductor transmission line having an outer conductor surrounding an inner conductor, a hollow wave guide, said outer conductor extending into said wave guide and having slots in the side walls thereof within said wave guide dividing a portion of said outer conductor into conductive strips, said inner conductor being connected to said outer conductor at one of said strips.

2,474,138
WORK REST AND METHOD OF FORMING THE SAME
Lukas Zimmermann, Birmingham, Mich.
Application August 31, 1945, Serial No. 613,823
12 Claims. (Cl. 51—238)



1. In a work rest, the combination with a plurality of hardened tip elements of a blade having a plurality of spaced segments along one edge thereof, said tip elements being respectively fused to said blade segments.

2,474,139
MICROBIAL FERMENTATION OF ACID HYDROLYZED CARBOHYDRATE MASHES
Seymour S. Block, Louisville, Ky., assignor to Joseph E. Seagram & Sons, Inc., Shively, Ky., a corporation of Indiana
No Drawing. Application June 3, 1944, Serial No. 538,692
7 Claims. (Cl. 195—96)

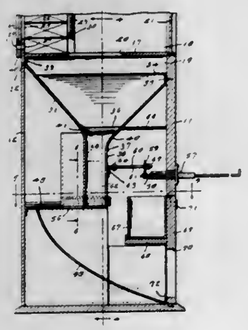


1. In the fermentation of starch mashes by bacteria, the steps which comprise acid hydrolyzing the starch to produce a high conversion thereof to fermentable sugars, and adding to the hydrolyzed product prior to fermentation thereof a material from the group consisting of sodium bisulphite, sodium metabisulphite, sodium sulphite, sulfurous acid, sulfur dioxide, sodium thiosulphate and cysteine, then adding the bacteria.

2,474,140
PROPELLER GOVERNOR
Charles W. Chillson, Caldwell, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Continuation of application Serial No. 360,243, October 8, 1940, which is a division of application Serial No. 261,879, March 15, 1939. This application February 14, 1948, Serial No. 647,634
4 Claims. (Cl. 200—53)

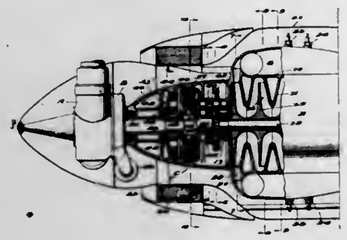
4. In a hydro-electric speed control device for use with an engine, a fluid supply, an engine driven rotating flyweight governor assembly, a valve movable along the axis about which the flyweights rotate in response to flyweight position changes, a fluid chamber fed by said fluid supply through said valve, a member movable in said chamber in accordance with changes in the amount of fluid therein, an electrical switch point movable with said movable member, a second switch point, engageable at times with the first, mounted for movement, and engine operated means for cyclically moving said second point toward and away from said first point through a determinate distance of travel, one of said points being yieldably mounted, said contacts being cyclically engageable with one another when said first contact is within the determinate distance of travel of said second contact.

2,474,141
METHOD AND APPARATUS FOR FEEDING SHEETS
Robert T. Chatterton, Chappaqua, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application October 11, 1945, Serial No. 621,697
25 Claims. (Cl. 271—18)



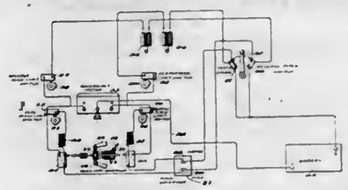
1. The method of individually feeding stacked sheets of metal by traversing a magnetic field of separation, which consists in maintaining a magnetic field by the introduction of varying degrees of flux from spaced magnet poles to produce strata of magnetic flux in said field having a minimum flux density at one boundary of the field and increasing to a maximum flux density at the opposite boundary, introducing the sheets into said magnetic field at the region of minimum flux density to magnetize the sheets so that they move toward the region having the greatest flux density, and spacing the magnetized sheet edges from said magnetic poles to create a reluctance gap for each sheet to cause separation of the sheets from one another while within the field.

2,474,142
COIN CONTROLLED PACKAGE VENDING MACHINE
Henry Purl Compton, Abilene, Tex., assignor of one-half to H. E. Montgomery, Dallas, Tex.
Application November 29, 1946, Serial No. 712,922
5 Claims. (Cl. 312—35)



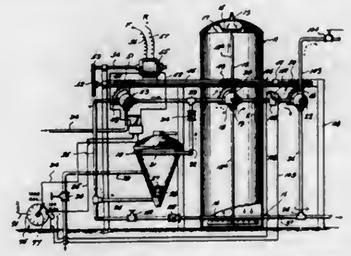
1. A package vending machine comprising a housing, a plurality of package magazines in said housing, a common hopper below said magazines, an upright tubular package delivery member below said hopper, means slidably supporting

said delivery member, a stationary delivery chute below said delivery member, and coin controlled



means for effecting movement of said delivery member to delivering position.

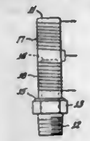
2,474,143
PROPULSION MEANS FOR AIRCRAFT AND THE LIKE
Archibald Graham Forsyth, Cheam, England, assignor to The Fairey Aviation Company Limited, Hayes, England
Application July 13, 1944, Serial No. 544,787
5 Claims. (Cl. 170—135.71)



1. In a device of the type described comprising, a variable pitch propeller, a compressor, a turbine, clutching means for operatively connecting the propeller with the shaft of said compressor, and a driving coupling connecting the shafts of said compressor and said turbine; that improvement which comprises mounting said propeller, clutching means, compressor, driving coupling and turbine in tandem along a longitudinal axis coincident with the shafts of the propeller, compressor and turbine, a series of elongated combustion chambers surrounding said compressor and having a common wall therewith, said combustion chambers extending rearwardly and being joined to said turbine to deliver exhaust gases thereto, and a plurality of propulsion jets disposed rearwardly of the turbine and connected to receive exhaust gases passing through the turbine.

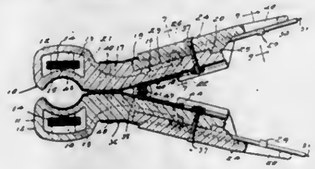
2,474,144
ELECTRICALLY AND POWER OPERATED PITCH CHANGING MECHANISM
Archibald Graham Forsyth, Cheam, England, assignor to The Fairey Aviation Company Limited, Hayes, Middlesex, England
Application December 13, 1944, Serial No. 567,991
14 Claims. (Cl. 170—160.18)

1. A control unit for variable pitch propeller systems comprising a reversible electric motor for effecting pitch changes in the directions of fine and coarse pitch, means driven by the propeller drive shaft for effecting pitch changes to a reverse pitch position and to feathering pitch, an electric circuit powered by a source of direct current, means in said circuit for energizing the electric motor with substantially less than the full voltage of said source for effecting changes in the directions of fine and coarse pitch, and means in said circuit for energizing the motor with the full voltage of said source of direct current and for simultaneously effecting actuation of said means driven by the propeller drive shaft for effecting changes to a reverse pitch position and to feathering pitch.



2,474,145
WATER SOFTENER
Marvin Gambill, Odessa, Tex.
Application April 16, 1945, Serial No. 588,633
7 Claims. (Cl. 210—24)

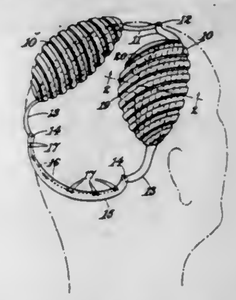
1. In water softening apparatus comprising a mineral tank, a brine tank, a pipe communicating with the upper and lower ends of said mineral tank, a multiple valve interposed in said pipe whereby fluid may be directed into and from a selected end of said mineral tank, an inlet pipe connected at one end to one side of said valve and at the other end to said brine tank adjacent the bottom of the latter, a second multiple valve interposed in said inlet pipe, a supply pipe connected to one side of said second valve, a pipe bridging one end of said brine tank to said inlet pipe between said first and second valves, a check valve in said bridging pipe opening in the direction of said inlet pipe, a fluid discharge pipe connected to said first valve, a third multiple valve



connected to said fluid discharge pipe, and a common operator for said multiple valves operatively connected thereto for moving all of said multiple valves at the same time.

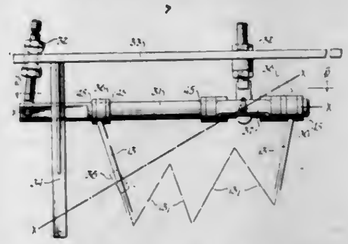
2,474,146
ELECTRIC PRESSURE HEAD
Claude M. Hathaway, Denver, Colo.
Application July 31, 1946, Serial No. 687,483
6 Claims. (Cl. 201—63)

1. An electric pressure head comprising an elongated member having a chamber at one end adapted to be connected to a source of pressure, a strain-responsive wire element mounted about the exterior of said member in the proximity of said chamber, and a similar strain-responsive wire element mounted on a portion of said member which is not subjected to stress or strain due to pressure within said chamber.



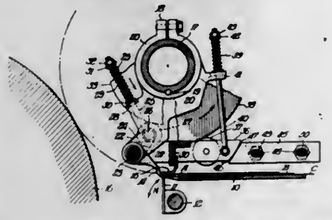
2,474,147
WAVE HEATER
James E. Hill and Thomas M. Ambler, San Antonio, Tex.
Application August 19, 1947, Serial No. 769,548
4 Claims. (Cl. 219—24)

1. A hair waving device comprising a pair of jaw members formed of a vitreous, non-conducting material and having confronting arcuate jaw faces, each member being formed with an inner sealed, air, gas and moisture tight chamber, a heating element in said chamber, a shank extending rearwardly from said member, a pair of contacts fixed in said shank, lead wires embedded in said shank and connecting said contacts with said element, a handle, a pair of contacts carried by said handle engageable with said first pair of contacts, a shell engaging about said shank and having a rearwardly extending portion, means securing said handle to said shank and to said extending portion, means pivotally securing said shells together, and a spring constantly urging said jaw members together.



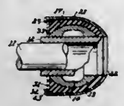
2,474,148
HAIR PAD, HAIRBAND, OR LIKE ARTICLE
Ronald James Horton, London, England
Application July 19, 1945, Serial No. 605,957
In Great Britain August 2, 1944
6 Claims. (Cl. 132—55)

3. A hair dressing device for personal wear comprising a former and a band connected to it so as to at least partially encircle the wearer's head whereof both the former and the band are shaped to conform to the style of hair dressing required and, when in use, are both at least



partly enveloped in and will both support and secure waves of the wearer's hair, said former comprising at least one edge slitted inwardly at intervals along its length to provide a grip for the hair which is passed around that edge.

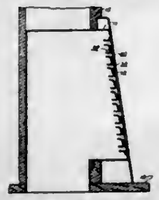
2,474,149
APPARATUS FOR CUTTING CURVED PLATES USED IN SPHERICAL TANKS
Kenneth Bourne Hume, Kew, Melbourne, Victoria, Australia
Application September 19, 1944, Serial No. 554,846
In Australia September 29, 1943
2 Claims. (Cl. 266—23)



1. Apparatus for forming curved segmental plates for the formation of spherical, dome-shaped and similar structures comprising a support, a main shaft, a plurality of means for carrying said shaft in spaced relation to said support, said means being spaced axially of the shaft and including adjustable elements for independently varying the spacing between the portions of the shaft carried thereby and the support, cutter arms mounted on said shaft for swinging movement about the same, a pair of brackets swingably mounted on said shaft adjacent one of said shaft-carrying means, a pair of secondary shafts each perpendicular to the main shaft and having one end fixed in one of the brackets, so that the axes of the secondary shafts always intersect each other at the axis of the main shaft, means at the remote ends of the secondary shafts for varying the spacing thereof from the support, and a cutter arm mounted on each secondary shaft for swinging movement about the same.

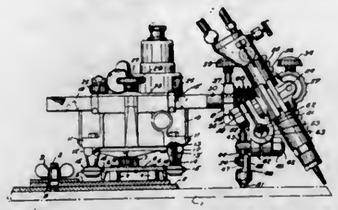
2,474,150
SHEET TRANSFER GRIPPER MECHANISM
Arthur G. Jacobson, Chicago, Ill., assignor, by mesne assignments, to The Miehle Printing Press & Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application March 29, 1946, Serial No. 658,077
6 Claims. (Cl. 271—53)

1. In sheet feeding mechanism of the class set forth, the combination comprising a support for sheets, sheet registering means, mechanism for transferring individual, registered sheets to a sheet carrying member, gripper fingers and cooperating pads carried by said mechanism, said fingers and pads being mounted for independent movement about a common axis, means for withdrawing said fingers and pads from their plane of transfer operation after a sheet to be transferred has been released by them, and means to return said fingers and pads to their sheet engaging position.



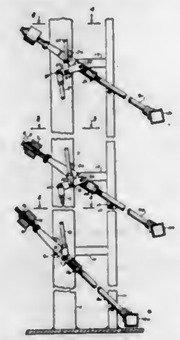
2,474,151
BEARING BRACKET
Marion I. Levy, Cleveland, Ohio
Application January 20, 1945, Serial No. 573,791
5 Claims. (Cl. 308—26)

5. A bearing bracket of the character described comprising in combination, a socket member made of sheet metal bent into suitable form and having tabs on the brim thereof, a tubular arm member made of sheet metal integral with the socket member and having an aerodynamic form for minimizing air turbulence thereat, and a ring member mounted in the socket member and engaged by the said tabs and being parallel with the longitudinal axis of the arm member.



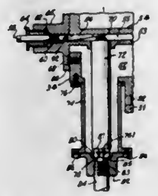
2,474,152
DIRECTIONAL AIR FLOW LOUVER
Marion I. Levy, Cleveland, Ohio
Application March 29, 1946, Serial No. 658,006
1 Claim. (Cl. 98—101)

A damper, comprising in combination, a stationary plate formed of stamped sheet metal including side frame elements and having a first series of horizontally extending and vertically spaced bars between said frame elements and also having a first series of slots between the said bars, each of the said bars having a laterally extending inclined fin projecting rearwardly and upwardly from the bottom edge thereof and formed from the metal removed from the adjacent slot; a plurality of guide tabs on the side frame elements, spaced therefrom and forming guiding channels thereon, a movable plate of stamped sheet metal including side frame elements engaged by the said guide tabs and movable in the said channels, the said plate having a second series of horizontally extending and vertically spaced bars between said frame elements and slidably engageable with the first series of bars and also having a second series of slots between the said bars, each of the second series of bars having a laterally inclined fin formed of the metal removed from the adjacent slot projecting



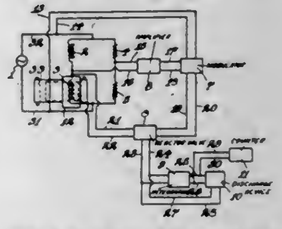
rearwardly and upwardly from the top edge thereof and through a contiguous slot of the first series, all of the fins of the respective stationary and movable plates being inclined at the same angle, the second series of bars obstructing the first series of slots and the said fins of both the first and second series being in close contact when the movable plate is in its closed position and correlatively the said bars clearing the said slots and the said fins of the two series being separated when the movable plate is in its open position, the said movable plate having a handle mounted thereon to facilitate movement thereof with respect to the stationary plate.

2,474,153
FLAME CUTTING TORCH MACHINE
Everett G. Livesay, New Orleans, La.
Application November 19, 1945, Serial No. 629,366
11 Claims. (Cl. 266—23)



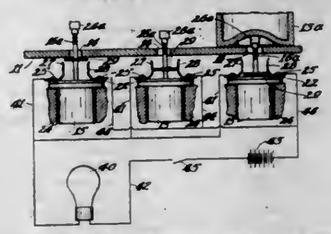
9. A flame cutting torch machine having a pair of separate sets of laterally interspaced supporting wheels disposed in track guided and retained relation respectively with a pair of cooperatively laterally interspaced and longitudinally extending track elements, a torch rack extending transversely of the machine, said rack extending laterally from a side of the machine, a post journalled on the end of the torch rack, a torch holder longitudinally and rotatably mounted on said post, a spacer element for said torch extending from said post and provided with a roller element at its free end, said roller element adapted to contact the work piece to space the tip of the torch therefrom and a spring reacting between said torch rack and said post for pressing said spacer element resiliently against the work piece.

2,474,154
LIQUID LEVEL TRANSLATING MEANS
Claudius R. McCauley, New Orleans, La.
Application July 20, 1945, Serial No. 606,246
7 Claims. (Cl. 73—311)



7. In a liquid level translating means, means responsive to change in liquid level, a plurality of vertically spaced float means carried by a support and successively operable by changes in liquid level, a floating lever pivoted at one end to an intermediate float means, means connecting the other end of said floating lever to a lower float means, a second floating lever pivoted at one end to a higher float means, means connecting the other end of said second floating lever to and intermediate the ends of the first floating lever, and means connecting the second floating lever to the means movable in response to a change of liquid level.

2,474,155
HEATING APPARATUS
Julius F. Melzer, Port Chester, N. Y.
Application June 15, 1945, Serial No. 599,692
12 Claims. (Cl. 257—2)



2. Apparatus for use in a heating system comprising a header having a cavity therein, a baffle for dividing the cavity into two compartments, openings in said header leading to each of said compartments, a cylinder fixed to said header and aligned with one of said openings, an opening in the end of said cylinder removed from said header, said opening having a valve seat, a thermostatically operated valve mounted in said cylinder, said valve having its valve head adjacent said seat, a spring holding said thermostatically operated valve mechanism against said baffle, and instrumentalities adjustable externally of said header for adjusting the position of said valve head with respect to said valve seat.

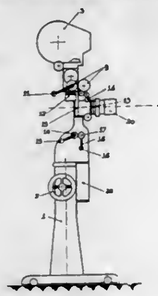
2,474,156
COUNTING MECHANISM
Laszlo Namenyi-Katz, London, England, assignor of one-half to Furzehill Laboratories Limited, Boreham Wood, England
Application April 3, 1945, Serial No. 586,333
In Great Britain December 23, 1943
11 Claims. (Cl. 235—92)

6. An apparatus of the class described adapted to be actuated by the insertion or passage of an article, comprising, in combination, means for generating a field of energy in the ether which is capable of being disturbed by the presence of an article therein, said means being an inductance arranged in an oscillatory circuit, means for traversing articles past said inductance whereby its value is altered and an impulse is set up in said circuit, and means for indicating said impulses, said inductance being arranged to form one limb of an electric bridge, a power supply arranged across one diagonal of said bridge, means for applying the potential resulting across the second diagonal to a circuit controlling said indicating means, which circuit includes a variable inductance in said bridge associated with the first said inductance and a follow-up device controlling said variable inductance so as electrically to balance said bridge and also controlling said indicating means.

2,474,157
DISPLAY ALARM
Barney Neediman, Chicago, Ill.
Application November 12, 1947, Serial No. 785,258
5 Claims. (Cl. 177—311)

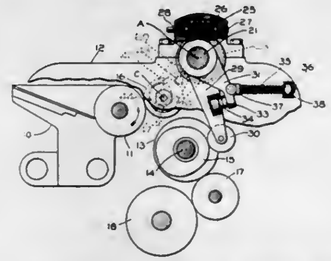
1. In a merchandise display stand including a display platform, said platform having an opening therethrough, an electrical alarm device and a source of electrical energy for said alarm device, means for sounding said alarm for a predetermined length of time when merchandise is removed from said platform, said means consisting of: a cylinder and a piston therein, a push rod secured to said piston and axially aligned with said opening, a helical spring within said cylinder opposing downward movement of said piston, the upper end of said push rod extending above said

platform under the action of said spring when no downward external force is applied thereto, said upper end being depressed when merchandise is placed thereon, an electrical contact plate integral said push rod, a pair of spaced conductive strips bridged by said contact plate during the intermediate portion of the upward movement of said push rod under the said action of said spring means, one of said pair of strips being conductively connected to one side of said source of electrical energy, the other of said pair of strips being conductively connected to the other side of said source of electrical energy through said alarm device, and means for delaying the speed with which said contact plate traverses said strips which consists of a small passageway piercing said piston and said push rod axially, whereby all air entering the displacement volume of said cylinder as said piston moves upward is throttled through said passageway.



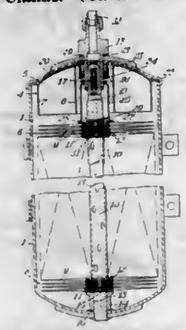
2,474,158
SPRING CLIP
William H. Neely, Cleveland, Ohio, assignor to The Universal Wire Spring Company, Cleveland, Ohio, a corporation of Ohio
Application September 16, 1944, Serial No. 554,521
3 Claims. (Cl. 155—180)

2. A resilient clip embodying a curved body portion formed of strip steel and secured at one end to a rail of the framework of an upholstered spring construction, said body portion being dimensioned to yieldingly hug the said rail, and a semi-circularly shaped end portion integrally extended from one end of said body portion crosswise thereof so as to provide an inwardly facing channel arranged radially with respect to said body portion, said clip permitting hugging of a rail of the frame work of a spring construction and securing of a cover member to the rail by seating the welted edge of the cover member in said end portion and holding same in position by clamping action between said end portion and the rail.



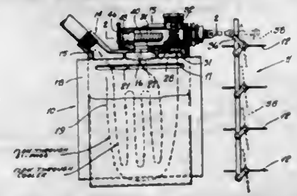
2,474,159
VIEW TAKING APPARATUS
Louis Georges Albert Pejois, Asnieres, France, assignor to Paul Rabanit, Paris, France
Application August 20, 1945, Serial No. 611,558
In France August 23, 1943
3 Claims. (Cl. 88—18)

1. A view taking apparatus for taking a predetermined number of views on strip elements comprising a strip holding and feeding box, hand-operated means for the intermittent drive of the strip passing unimpressed out of said box, cutting means controlled by said hand-operated means for cutting the strip when it has advanced through a predetermined length corresponding to the number of views to be taken, a view-taking system including an object glass and a shutter controlled by the hand-operated means at each intermittence of the drive operated by same, further hand-operated means for driving the cut and exposed strip element, locking means adapted to prevent operation of the first hand-operated means from continuing as soon as the predetermined number of views has been taken on the strip, means whereby the second hand-operated means release said locking means and a removable



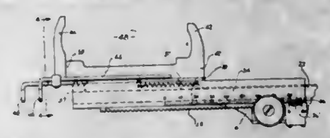
light-tight receiver adapted to receive said strip element driven by the second hand-operated means.

2,474,160
DUCTOR ROLLER ADJUSTMENT AND METHOD
Henri E. Peyrebrune, River Forest, Ill., assignor, by mesne assignments, to Miehle Printing Press and Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application May 9, 1947, Serial No. 746,992
2 Claims. (Cl. 101—348)



1. In an inking mechanism for printing presses, the combination of an ink supply member, an ink distributing roller system, a ductor roller for conveying ink from said member to said system, means for intermittently actuating the ductor roller and including a supporting shaft, arms mounted on said shaft and providing bearing means for the ductor roller, a cam actuated lever also associated with said shaft to intermittently rock it together with said arms about its axis, adjustable eccentric members arranged adjacent each end of said shaft, means for actuating said eccentric members to thereby establish the effective radius of the ductor roller axis in order to vary the degree of contact of the ductor roller with the distributing roller, and additional, independently operable eccentric members associated with said arms to provide adjustable bearing means for the ductor roller to thereby vary its degree of surface contact with said ink supply member independent of the setting between the ductor roller and the distributing roller, and by maintaining the setting relation between said latter rollers undisturbed.

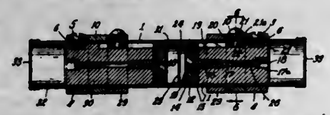
2,474,161
LUBRICATING OIL FILTER
Joseph Allen Pickard, Acton, London, England, assignor to The Metafiltration Company Limited, Hounslow, England, a company of Great Britain and Northern Ireland
Application June 1, 1944, Serial No. 538,283
In Great Britain April 3, 1943
2 Claims. (Cl. 210—181)



1. A filter comprising a filter chamber including means defining an open bottomed air chamber in the upper portion thereof, a vertical assemblage of filtering elements mounted in said filter chamber below the level of said air chamber, a central drainage tube extending vertically through said filtering elements and adapted to receive filtered liquid therefrom, means for conducting liquid from said drainage tube at the upper portion of said assemblage of filtering elements, means including a spring arranged in compression between the top inner side of said filter chamber and the top upper side of the uppermost filter element of said assembly of filtering elements for maintaining said assembly in liquid-tight engagement with each other around said drainage tube, an inlet including a non-return valve for introducing all the liquid to be filtered to the filter chamber, and an outlet communicating with said means for conducting liquid from said drainage tube for withdrawing filtered liquid from the filter chamber.

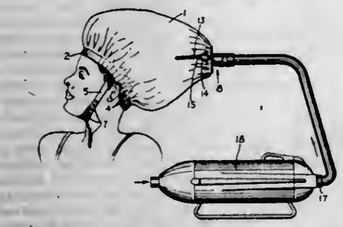
2,474,162
OIL COOLER HAVING AUTOMATIC BIMETAL THERMOSTAT CONTROLLED SHUTTER
Walter R. Ramsaur, Los Angeles, Calif., assignor to The Garrett Corporation, Airesearch Manufacturing Company division, Los Angeles, Calif., a corporation of California
Application June 2, 1941, Serial No. 396,360
16 Claims. (Cl. 236—35)

1. In an oil cooling device of the character described, having an oil cooler with an oil inlet and an oil outlet whereby a flow of oil to be cooled may be passed through the oil space of the heat exchange zone of the cooler and shutter means for controlling a flow of air through the air space of said zone, the combination of: an expansible device having a fluid movable part connected to said shutter means to operate the same; an inlet valve connecting the interior of said expansible device with a source of fluid under pressure; means to actuate said valve so as to control the application of fluid pressure to said expansible device comprising a part exposed to oil pressure which varies in accordance with the pressure drop of oil in said oil space of said cooler and acting in response to an increase in said pressure above a prescribed value to operate said valve in such manner that said movable part will close said shutter means; and means acting when said pressure is below said prescribed value to correct the position of said shutter means as the temperature of the oil departs from a prescribed normal value and thereby return said temperature to normal value, said last named means having a thermostat exposed to the heat of oil at a selected point in the flow thereof and operating in accordance with a reduction in temperature thereof to feed oil under pressure to the interior of said expansible device.



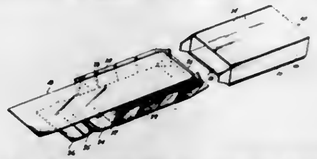
2,474,163
GRIPPING MEANS FOR MICROSCOPE MECHANICAL STAGES
Charles P. Riley, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application November 25, 1946, Serial No. 712,075
3 Claims. (Cl. 88—40)

1. A mechanical stage for use with a microscope or the like comprising a supporting member adapted to be secured to the stage or platform of the microscope, an intermediate supporting member slidably carried thereby and adapted to extend across at least a part of the upper surface of said platform in proximity thereto, a third supporting member carried by said intermediate member and having slidable engagement therewith, a pair of readily operable traversing mechanisms, one of said mechanisms being operatively connected to said first and intermediate members so as to cause movement of said intermediate member and third member in a first direction parallel to said supporting surface during manual operation thereof, the other of said mechanisms being operatively connected to said intermediate and third members so as to cause movement of said third member parallel to said upper surface and in a direction angularly disposed relative to said first direction during manual operation thereof, gripping means carried by said third member and comprising a fixed gripping arm and a movable gripping arm, said movable gripping arm being slidable relative to said third member and said fixed arm, spring means connected to a part fixed relative to said third member and connected to said movable arm and normally urging the movable arm toward said fixed arm, and a pair of spaced tabs connected to said arms re-



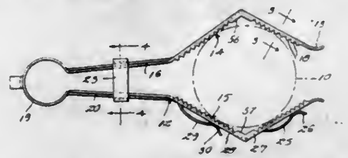
spectively and projecting laterally therefrom in adjacent spaced relation to each other so as to provide opposed finger engaging surfaces lying in planes generally perpendicular to the direction of sliding movement of said movable arm, so that an opening of said gripping arms for the insertion or removal of a microscope slide or the like will be effected when said finger engaging surfaces are gripped by the operator and one of said tabs is pressed toward the other.

2,474,164
CHECK SWING HINGE
George Riemer, Chicago, Ill.
Application January 19, 1946, Serial No. 642,245
3 Claims. (Cl. 16—84)



1. A check swing hinge comprising a normally stationary cylinder, means for so supporting said cylinder, a piston rotatably and longitudinally slidably disposed in said cylinder, a ring journalled on said cylinder intermediate the ends, and in substantially fixed position axially of said cylinder, means interconnecting said ring and said piston comprising a pin anchored in said ring and projecting inwardly therefrom into said cylinder, the latter being provided with a circumferentially extending slot permitting the passage of said pin into the cylinder as aforesaid and movement of said ring and pin circumferentially of said cylinder, said piston having a surface slot receiving said pin so as to cause said piston to rotate in unison with any rotary movement of said ring, means for effecting longitudinal movement of said piston as an incident to such rotary movement thereof, means closing one end of said cylinder, and means for restricting the flow of air from the closed end portion of said cylinder on one side of said piston to the cylinder portion on the other side of said piston as an incident to its longitudinal movement in the cylinder, thereby restraining longitudinal movement of said piston and rotary movement of said ring about said cylinder, and means carried by said ring to facilitate attachment thereof to a member which is to be supported for restrained pivotal movement.

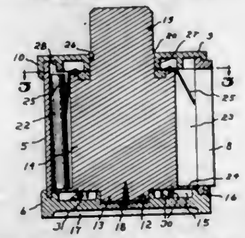
2,474,165
HAIR DRYING APPARATUS
Ann G. Roberts, Chestertown, Md.
Application April 28, 1947, Serial No. 744,441
5 Claims. (Cl. 34—99)



1. In hair-drying apparatus, a hood comprising a tapered sack forming an enclosure for the hair open at its ends, a head band forming the opening at the larger end and having said larger end gathered into it, and a flanged adaptor fitting forming the opening at the smaller end and having said smaller end gathered into its flange, said head band having a portion snugly fitting around the forehead and a crinkled portion around the base of the hair for permitting the escape of a limited amount of air from said enclosure and a valve in the enclosure near the adaptor end for exhausting a portion of the air from said enclosure.

2,474,166
PACKAGE
Herbert Rumsey, Jr., Rochester, N. Y.
Application October 1, 1946, Serial No. 700,397
6 Claims. (Cl. 206—46)

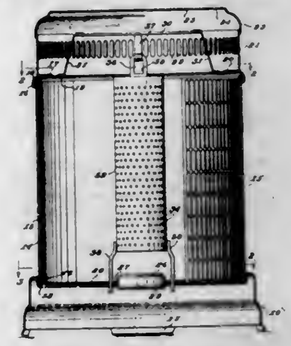
6. A package comprising a container having an opening therein and formed with a pair of side flaps extending partway across the opening from opposite sides thereof, a slide for holding the contents of the package disposed in said container and removable through said opening, said slide having a base portion holding the contents and being open at the top and being disposed in said container on one side of the opening and having an extension flap extending across said opening at right angles to the side flaps and serving as a closure for said opening, the extension flap having a relatively short folded tab projecting into the container on the opposite side of the opening from the base portion and frictionally holding the closure in position, said tab being folded upon itself and having its end portion projecting outwardly from the container and serving as a handle, and a protecting strip of flexible sheet material extending over the contents at the open top of the slide and also across the opening in the container in contact with the contents and inside said side flaps said trip also having a portion extending into and out of the container with the folded tab whereby the tab and strip can be pulled to first open the closure and the side flaps and thereafter to withdraw the slide from the container.



2,474,167
RECEPTACLE HOLDER
Raymond R. Rundell, Miami, Fla.
Application October 13, 1944, Serial No. 558,535
1 Claim. (Cl. 294—33)

A receptacle holder comprising a pair of opposed V-shaped jaw members disposed with the divergent sides of one of said members con-

fronting in facing relation the divergent sides of the other member, said jaw members each including a flat body portion, inwardly projecting teeth on the opposite edges of said body portion, a reinforcing flange on each edge of said jaw members at the apex thereof, rearwardly convergent arms carried by the rear end of said jaws, a resilient loop at the convergent end of said arms, an arm compressing ring around said arms and slidable along the length thereof, each of said arms formed with a series of longitudinally spaced apart recesses therein, said ring formed with inwardly extending detents engageable in selected recesses for releasably latching said ring in adjusted position longitudinally of said arms and holding said jaws in selected spaced apart position.



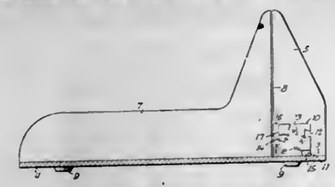
2,474,168
CIGARETTE OR LIKE HOLDER AND DISPENSER
Murray H. Sacher, Staten Island, N. Y., and Carmine J. Gentile, Waterbury, Conn.
Application August 5, 1948, Serial No. 42,604
4 Claims. (Cl. 312—97.1)

1. A cigarette or like holder and dispenser, comprising a housing having a cylindrical chamber, a base attached to said housing, a rotor mounted in said chamber and having its periphery formed with a plurality of cigarette receiving channels closed at their lower ends and disposed in parallel with the rotor axis, said rotor being dimensioned relative to said chamber so that cigarettes are retained in said channels by said housing, said housing having a discharge port with which said channels successively register as said rotor is turned and including portions forming flanges laterally of said port, a spring in each channel to urge a cigarette against said housing until said discharge port is reached and then to eject it, said rotor being rotatably supported by said base and including a knob, and a cover having a centrally disposed aperture of sufficient size to receive said knob and including a downturned flange to fit over the upper part of said housing, said flange having a recess therein to straddle said port flanges so that said cover is held thereby against rotation.

2,474,169
METAL RADIANT FOR GAS HEATERS
Roy Shelton, Chattanooga, Tenn., assignor to Samuel Stamping and Enameling Company, Chattanooga, Tenn., a corporation of Tennessee
Application July 22, 1948, Serial No. 40,049
2 Claims. (Cl. 126—85)

1. In a gas heating stove including a generally cylindrical vertical wall and a top cover, a horizontally disposed burner supported substantially axially of said wall and adjacent the bottom thereof; a sheet metal cylindrical radiant disposed over said burner in substantially coaxial relation to said wall, and means for removably securing the radiant within the stove, said stove including a horizontally disposed baffle adjacent said top cover and a horizontally disposed plate adjacent the bottom of the wall, said means com-

prising a cooperating hook and tongue on the baffle and radiant for suspending the latter from the baffle, and said means further comprising a pair of legs depending from the lower end of the radiant and removably received in apertures in said plate.



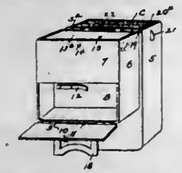
2,474,170
SEPARATION OF ACETONE AND BUTYL ALCOHOL FROM FERMENTED MASH BY ACTIVATED CHARCOAL
Max Sulzbacher, London, England, assignor to Butacet Limited, London, England
No Drawing. Application July 26, 1944, Serial No. 546,742. In Great Britain July 27, 1943
6 Claims. (Cl. 260—593)

1. A process of obtaining butyl alcohol and acetone from a fermented liquid mash containing said two substances which comprises substantially completely removing undissolved solid residue of the fermentation process from said liquid mash, contacting the substantially clear liquid portion of said mash with activated carbon, until such carbon contains a relatively great amount of adsorbed butyl alcohol with only a much less amount of acetone, and similarly contacting the remaining liquid portion of said mash from which butyl alcohol has been so adsorbed on activated charcoal with a separate quantity of activated charcoal until said liquid no longer contains acetone, whereby said second quantity of activated charcoal adsorbs the acetone from said liquid.

2,474,171
SLICE THICKNESS GAUGE FOR SLICERS
Ziegner Swanson, De Kalb, Ill.
Application November 23, 1945, Serial No. 630,291
6 Claims. (Cl. 146—150)

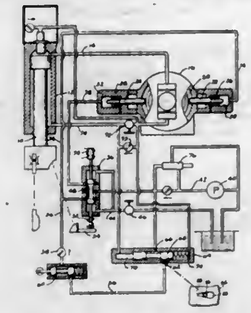
6. In combination, a support, an elongated rib thereon, and a gauge block for use in gauging dimensions, comprising a block of polygonal cross-section and uniform size from end to end adapted to be placed on said support in any one of a plurality of positions of rotation thereof and having longitudinally extending grooves provided therein, one on each side face, said grooves being of identical form and size and parallel to but differently

spaced from the longitudinal edges of said block and all of a size to receive the aforesaid rib with a close working fit, said rib being tapered so that it is wider at one end than at the other, and



said grooves being also similarly tapered for wedging engagement of said rib in either of said grooves, the rib being dovetail-shaped in cross-section and all of said grooves being correspondingly dovetail-shaped in section.

2,474,172
FASTENING DEVICE
George A. Tinnerman, Cleveland, Ohio, assignor to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application November 26, 1947, Serial No. 788,113
14 Claims. (Cl. 287—20)



3. In a joint or connection, a shaft, a plate or panel having an opening receiving said shaft and a hole spaced from said opening, and a clip fastener comprising a metal body bent to define a band embracing said shaft and a pair of spring arms extending from said band, and a locking lug on a spring arm in spaced relation to said band and received in said hole to lock the clip fastener in attached position.

2,474,173
COMPLETE CIGARETTE CASE
Victoria Trinko, Downers Grove, Ill.
Application September 29, 1947, Serial No. 776,711
5 Claims. (Cl. 312—31.1)

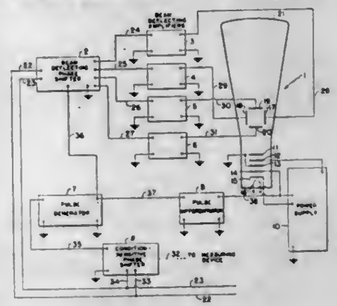
1. A device of the character described comprising a first casing dimensioned to receive cigarettes on end and with their ends substantially flush with the upper end of the casing, a second casing hingedly connected along one side of the first named casing at the upper edge thereof, a lid covering the second named casing in position to lie between said second named casing and the upper ends of the cigarettes when the two casings are swung into alignment with each other, means for holding said lid closed with respect to the second casing and a sheet of water absorbent material upon that side of said lid which faces toward said cigarettes when the casings are moved into alignment with each other.

2,474,174
HYDRAULIC CONTROL SYSTEM FOR VARIABLE DELIVERY PUMPS
Warren R. Tucker, Dayton, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del., a corporation of Delaware
Application September 10, 1945, Serial No. 615,313
4 Claims. (Cl. 60—52)

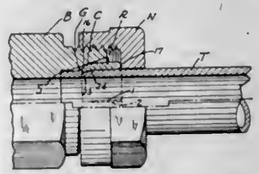
1. In a hydraulic system; a reciprocable plunger having advancing and retracting areas; a fluid source connected to supply said areas; opposed fluid operable control means associated with said source operable to position said source in full delivery in one direction or the other or to position said source in neutral; a pilot pump; a choke valve; valve means movable to connect said pump with one or the other or both of said control means; means selectively operable for actuating said valve to connect said pump with one of said control means while exhausting the other through said choke valve for positioning said source to deliver fluid to said advancing means; and means for supplying a variable pressure to said other control means during the advancing movement of said plunger comprising, valve means arranged between said pilot pump and said choke valve and operable during the advancing movement of said plunger for bypassing a portion of the delivery of said pilot pump to exhaust through said choke valve.

2,474,175
PROCESS FOR CARRYING OUT CONDENSATION REACTIONS
Charles Weizmann, London, England, assignor to Polymerisable Products Limited, London, England, a British company
No Drawing. Application May 3, 1945, Serial No. 591,857. In Great Britain March 2, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 2, 1964
12 Claims. (Cl. 260—465)

1. A process for carrying out a condensation reaction between a substance containing a reactive group selected from the class consisting of methylene (CH_2) and methine (CH) on the one hand, said reactive group being in the immediate vicinity, in the molecule, of a carbon-containing group containing an unsaturated bond, and a substance which is a member of the group consisting of alkyl halides, alkenyl halides and aralkyl halides on the other hand, which process includes the feature that the reagent used for promoting the condensation is the solid very finely divided complex obtained by the interaction of potassium hydroxide and an organic substance containing two ether forming oxygen atoms, which two oxygen atoms are separated from each other by at least one and not more than two carbon atoms, such complex being suspended in an excess of said organic substance.



2,474,176
HOOK AND LINE HOLDER
Claude E. Wenck, Rockford, Ill.
Application July 21, 1947, Serial No. 762,304
9 Claims. (Cl. 43—33)

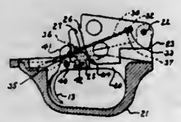


2. A fishing rod attachment comprising the combination with a fishing rod having a fish line and fish hook in connection therewith, and a reel for winding up said line including a hand crank equipped with a knob, of an elongated support having means on one end adapted to receive said rod and means on the other end adapted to receive said knob, whereby said support is adapted to be mounted on said rod and reel, and a fish hook holder adapted to be attached to the hook and adjustable along said support to a position where it holds the line taut.

2,474,177
CATHODE-RAY INDICATOR
Rudolf F. Wild, Philadelphia, Pa., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 17, 1947, Serial No. 742,081
29 Claims. (Cl. 177—351)

1. In combination, a normally non-conductive cathode ray tube operative when conductive to produce an electron beam, beam deflecting means adapted to be connected to a source of alternating voltage and to be normally made operative to deflect said beam from the axis of said tube and to rotate it about said axis at a frequency corresponding to the frequency of the alternating voltage supplied by said source, control means responsive to a controlling condition of variable value and having an output circuit in which a voltage appears which is modified in accordance with the value of said controlling condition, means controlled by the output voltage of said control means and including a pulse generator responsive to said output voltage and having an output circuit in which a voltage pulse appears once during each cycle of alternation of the first mentioned voltage, differentiating means operative to cause said pulse to make said tube conductive during a portion of the corresponding cycle of alternation of said first mentioned voltage, and means operative to cause said pulse to make said beam deflecting means inoperative during the intervals in which said tube is made conductive, each of said portions being dependent for its position in the corresponding cycle of alternation of said first mentioned voltage on the instantaneous value of said condition.

2,474,178
PIPE COUPLING
Paul D. Wurzburger, Cleveland Heights, Ohio
Application August 9, 1945, Serial No. 609,739
4 Claims. (Cl. 285—122)

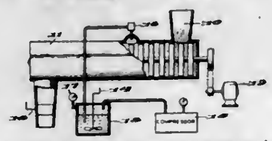


1. In a tube coupling having a body member with a flared mouth adapted to receive the tube to be coupled and receive a sealing ring and constrict the same upon the tube when the ring is forced into said flared mouth, the tube when coupled having an annular groove into which the leading end of said ring is constricted, and having means coacting with said member and said ring to force the ring into the said flared mouth of said member, the improvement that said ring prior to being constricted comprises a split substantially cylindrical annulus having an axial gap, the circumferential length of said ring exclusive of said gap being less than the initial outer circumference of the tube to be coupled but not less than the least circumferential length of the bottom of said groove, and said ring after being constricted having its leading end turned radially inwardly into said groove with the edges of the gap in close sealing contact at the leading end but spreading apart toward the other end thereof, whereby the leading end is in close sealing engagement and the ring in clamping contact with the tube.

2,474,179
ACID CLEANING COMPOSITION
Francis N. Alquist and Charles W. Hopkins, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application May 2, 1947, Serial No. 745,634
3 Claims. (Cl. 252—148)

1. A composition for cleaning a ferrous metal surface comprising an aqueous solution containing from 5 to 25 per cent of HCl, from 0.1 to 2 per cent of an organic nitrogen base selected from the group consisting of pyridine and quinoline and from 0.1 to 5 per cent glyoxal.

2,474,180
FIRING MECHANISM
Val A. Browning, Ogden, Utah, assignor to J. M. & M. S. Browning Company, Ogden, Utah, a corporation of Utah
Original application September 27, 1944, Serial No. 555,949. Divided and this application October 28, 1944, Serial No. 560,743
6 Claims. (Cl. 42—69)



1. In a firing mechanism, a trigger plate, a hammer pivoted at one end on said trigger plate and having a sear notch on its other end, a first pin extending through and journaled in said hammer adjacent the pivot thereof and having diametrically disposed openings, a second pin journaled in said trigger plate rearwardly of said hammer and also having diametrically disposed openings, two guide rods respectively disposed to opposite sides of said hammer and having their forward ends extending into the openings in the first pin and their rear ends slidably extending through the openings in said second pin, and a main spring about each guide rod between said pins.

2,474,181
ANODIC COATING OF MAGNESIUM
Herbert K. De Long, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application October 23, 1944, Serial No. 560,037
4 Claims. (Cl. 204—56)

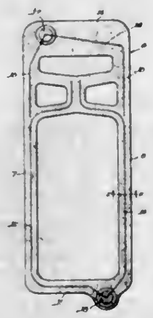
1. A method of producing a dense, thin abrasion- and corrosion-resistant coating upon articles of magnesium and magnesium-base alloys which comprises immersing the article in a solution consisting of water, an alkali metal hydroxide in a concentration of at least 30 grams per liter of solution, and a water-soluble aliphatic hydroxyl compound selected from the group consisting of methanol, ethanol, ethylene glycol, propylene glycol, glycerol, mannitol, 2-ethoxyethanol, and diethylene glycol in a concentration between 50 and 500 milliliters per liter of solution, said solution being maintained at a temperature between 60° and 100° C., and subjecting the article while so immersed to anodic electrolysis at a current density between 1 and 100 amperes per square foot and at a potential not exceeding about 10 volts.

2,474,182
PRESERVATION OF PIGMENTS IN ALFALFA
John C. Kephart, Lamar, Colo., assignor to National Alfalfa Dehydrating and Milling Company, Lamar, Colo., a corporation of Delaware
Application February 26, 1947, Serial No. 731,117
21 Claims. (Cl. 99—8)

1. The method of reducing the loss in pigment content, particularly carotene content, of prepared alfalfa products, which method comprises applying to the alfalfa a non-acidic treating agent comprising a tissue-penetrating vehicle and a small proportion, based on the alfalfa, of a pigment preserver selected from the group consisting of alkoxy-, hydroxy-, and anilino substituted diphenylamines.

2,474,183
ROCKET PROPULSION BY REACTING ALKYL-SUBSTITUTED MONONUCLEAR AROMATIC AMINES AND NITRIC ACID
Victor L. King, Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 9, 1943, Serial No. 497,999
4 Claims. (Cl. 60—35.6)

1. A rocket propulsion method which comprises generating an ignited propulsive charge by commingling with strong nitric acid a volatile hydrocarbon having dissolved therein 10–50% of an alkyl-substituted mononuclear aromatic amine and ejecting the burning charge at high velocity.

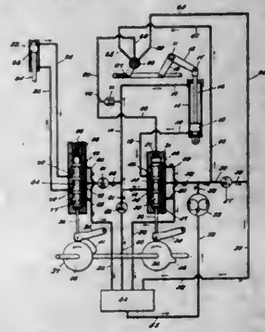


2,474,184
METHOD OF PURIFYING GLUTAMIC ACID AMIDES OF PTEROYLGLUTAMIC ACID
Erwin Kuh, New Brunswick, and James M. Smith, Jr., North Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 13, 1946, Serial No. 690,348
7 Claims. (Cl. 260—251)

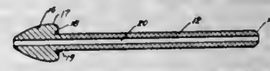
1. A method of separating glutamic acid amides of pteroic acid from related pterins in association therewith which comprises the steps of preparing an aqueous solution of magnesium pteroylglutamate, separating insoluble bodies from the soluble magnesium pteroylglutamate, and thereafter acidifying the solution to obtain a precipitate of a glutamic acid amide of pteroylglutamic acid and recovering the said precipitate.

2,474,185
METHOD OF PREPARING 4-AMINO-1, 8-NAPHTHALIC ACID IMIDES
Hans Z. Lecher, Plainfield, Mario Scalera, Somerville, Asa Willard Joyce, Plainfield, and Warren S. Forster, Maplewood, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 5, 1942, Serial No. 457,516
12 Claims. (Cl. 260—281)

1. A process for producing 4-amino-1,8-naphthalic acid imides which comprises reacting 4-amino-1,8-naphthalic anhydride with a large excess of an essentially undiluted primary amine having a melting point not in excess of 150° C.



2,474,186
REINFORCED CORE
Milton M. Marks, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Substituted for application Serial No. 536,618, May 20, 1944. This application February 7, 1947, Serial No. 727,024
1 Claim. (Cl. 22—165)



A baked sand core of a shape requiring reinforcement, the said core having a reinforcing member imbedded therein formed of substantially rigid material consisting of a thermoplastic condensation product of the super polyamides class and possessing physical properties adapted to withstand core baking temperatures without disintegration but which will disintegrate at the temperatures encountered during the pouring of molten metal into a mold employing said reinforced core thereby to form substantially clear, unrestricted passages through the core for the venting of gases after the molten metal has been poured.

2,474,187
CONTROL SYSTEM FOR FLUID MOTORS
Albert M. Olson, Wauwatosa, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application November 2, 1945, Serial No. 626,290
4 Claims. (Cl. 60—97)

4. In a control system for a pair of intermittently operable fluid motors deriving their power from a single source, a fluid circuit for one of the motors; means for establishing differential fluid pressures in different portions of said circuit; a second fluid circuit, for the other of said motors, connected to and receiving its supply of fluid from one of the differential pressure portions of the first circuit; a valve in each of said circuits for supplying fluid therein to its motor to reciprocate the working elements thereof, the valve in the first circuit connecting the motor therein to one pressure portion during the forward stroke of its working element and to the other pressure portion during the return stroke of said element; means for actuating the valve in the first circuit in one direction by pressure from said first circuit; additional means for actuating said valve in the opposite direction; means for actuating the valve in the second circuit; and means for co-ordinating the action of the two last mentioned means.

2,474,188
ENEMA TUBE
Herman Leo Pohl, San Francisco, Calif., assignor to Dispos-A-Tube, Inc., a corporation of Michigan
Application July 23, 1946, Serial No. 685,810
7 Claims. (Cl. 128—239)

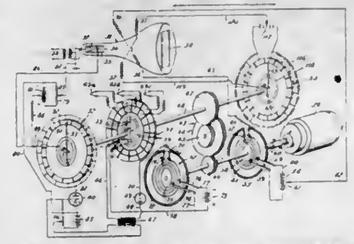
1. An enema tube comprising a shaft, a conoidal head, a rounded annular edge on the head adjacent the shaft, and an annular and forwardly inclined base surface for the head between said edge and said shaft.

2,474,189
ELECTRIC SWITCH
Malcolm E. Porter, Middleboro, Mass., assignor to The Lobi Manufacturing Company, Middleboro, Mass., a corporation of Massachusetts
Application March 15, 1946, Serial No. 654,643
5 Claims. (Cl. 200—5)

1. In an electric switch having a casing comprising a recessed body section and a cover section, a partition extending across the recess of the body section, a plurality of resiliently depressible contact fingers anchored on said partition and projecting in spaced relation at one side of the partition, one of said fingers having extent also at the other side of the partition and constituting there a resilient depressible contact

finger, a fixed terminal member overlying the free end of the latter said finger in position for said finger normally to resiliently engage the overlying terminal, a fixed terminal below the free end of one of the said fingers at the other side of the partition and in position to be engaged by said finger when the latter is depressed, a button for each said finger projecting through the cover section of the casing and having its inner end engaging a said finger, and means interiorly of the cover section for automatically latching any said button in depressed position in response to a finger depression of any said button, said means being responsive for releasing a previously depressed and latched button whenever another said button subsequently is depressed.

2,474,190
THERMOSTATIC SWITCH
Malcolm E. Porter, Middleboro, Mass., assignor to The Lobl Manufacturing Company, Middleboro, Mass., a corporation of Massachusetts
Application May 2, 1947, Serial No. 745,599
5 Claims. (Cl. 200—139)



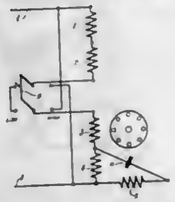
1. In a thermostatic control device, an insulating housing defining an interior chamber, a pair of contact elements in coacting relation within said chamber, at least one of said contact elements comprising a bi-metal strip movable toward and from the other contact element in response to temperature changes, there being an access opening through each of two opposite walls of said housing through one of which said bi-metal strip may be engaged and bent in direction towards the other strip and through the other of which said bi-metal strip may be engaged and bent in direction away from the other strip for calibrating the device, and a pair of terminals exteriorly of the housing and each in electrical connection with a different one of said strips.

2,474,191
TONE CONTROL
John Drysdale Reid, Cincinnati, and Paul F. G. Holst, Mount Healthy, Ohio, assignors to Avco Manufacturing Corporation, Cincinnati, Ohio, a corporation of Delaware
Application June 6, 1947, Serial No. 752,878
5 Claims. (Cl. 179—1)

1. The method of tone control for an electronic sound reproducing system which consists of dividing the energy input to the system into a pair of channels, filtering the energy in said channels to suppress frequencies above a predetermined value in one of said channels and to suppress frequencies below a predetermined value in the other of said channels, increasing the gain in one of said channels, and simultaneously decreasing the gain in the other of said channels by a corresponding amount to thereby maintain the total output substantially constant.

2,474,192
ELECTRONIC CURVE PLOTTING DEVICE
Carleton H. Schlesman, Camden, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application April 25, 1944, Serial No. 532,686
7 Claims. (Cl. 73—341)

1. An electronic indicator for simultaneously indicating a plurality of temperatures, that comprises a cathode-ray tube, vertical and horizontal sweep circuit means for said cathode-ray tube giving a rectangular sweep pattern composed of parallel lines, a plurality of thermocouples, a commutator for sequentially selecting the electrical outputs of one after another of said thermocouples, means for coupling said commutator to said sweep circuit means so that it will select each thermocouple at the same time in each scanning operation, means for generating a voltage that changes progressively as each line of the pattern is scanned, an electrical circuit connecting the voltage generating means and selected thermocouple output in opposition, another electrical circuit coupled to said first electrical circuit and responsive to the variation of voltage from balance in one direction in said first electrical circuit, said second electrical circuit being connected to the intensity grid of said cathode-ray tube so as to change the potential of the intensity grid past the cut-off point in response to a change in voltage balance in the first electrical circuit.

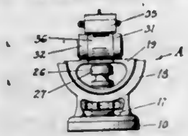


2,474,193
CALCIUM SILICATE PHOSPHOR
James H. Schulman, Cambridge, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
No Drawing. Application August 29, 1945, Serial No. 613,424
5 Claims. (Cl. 252—301.4)

1. A powdered mixture for making a fluorescent calcium silicate which consisting essentially of about 1 mol of a calcium compound selected from the group consisting of the oxides and those compounds which decompose on heating to form the oxides, about 1.2 mols of silica, between about .044 and .088 mol of a manganese activator, and between about .0025 mol to about .025 mol of lead fluoride.

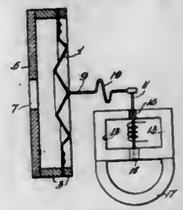
2,474,194
N-HETEROCYCLIC SUBSTITUTED GUANAMINES
Jack Theo Thurston, Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 30, 1941, Serial No. 409,153
1 Claim. (Cl. 260—249.5)

4-N-2'-pyridyl formoguanamine.



2,474,195
DUAL-VOLTAGE DUAL-SPEED CAPACITOR MOTOR
Philip H. Trickey, North Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application February 14, 1946, Serial No. 647,450
7 Claims. (Cl. 318—225)

1. A capacitor motor comprising two line terminals, a closed-circuited rotor, a stator having a main winding and an auxiliary winding disposed thereon at a space angle to each other, said main winding comprising four coils, each having substantially the same number of effective turns, a capacitor connected in series circuit relation with said auxiliary winding, said main winding coils being connected in series across the line terminals, and said series auxiliary circuit, including the capacitor, being permanently connected across only one of said main winding coils.

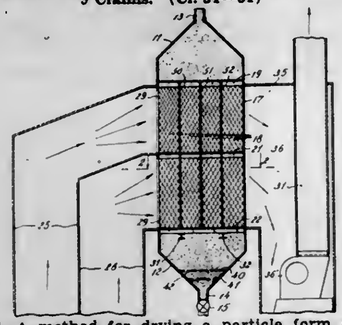


7. A dual-speed capacitor motor comprising a closed-circuited rotor, a stator having thereon a main winding and an auxiliary winding disposed at a space angle to each other, said main winding comprising series-connected pairs of coils, each coil having substantially the same number of effective turns, capacitor means connected permanently in series circuit relation to said auxiliary winding, said series circuit being permanently connected in parallel with one of said main winding coils, double-pole, double-throw switch means for, in one position, connecting said series-connected pairs of coils in parallel across a source of single-phase alternating-current energy for relatively high-speed motor operation, and, in the other position, connecting said series-connected pairs of coils in series across said source for relatively low-speed motor operation.

2,474,196
INSTRUMENT MOUNTING
Alfred Donald Coltman, Vancouver, British Columbia, Canada, assignor to Graflex, Inc., Rochester, N. Y., a corporation of Delaware
Application October 17, 1945, Serial No. 622,732
14 Claims. (Cl. 248—183)

1. An instrument mounting unit comprising a base plate, a pedestal rising therefrom and terminating in an arcuate holder, the concavity whereof faces upward, an instrument mounting element having a cooperating, downwardly facing, arcuate contour operatively connected to said arcuate holder, the latter being centered with respect to the vertical axis of the pedestal, the said instrument holding element being arcuately movable in the said upwardly facing, arcuate holder to adjust said holder to varied inclined positions relative to the horizontal, the said instrument-holding element having extending upwardly therefrom at least one bearing projection and a shaft received in the latter, said instrument mounting unit having an instrument holding element received upon said shaft and adapted to be turned angularly thereon to change the position of the instrument, the instrument carried by the instrument mounting unit being disposed substantially adjacent to the central vertical axis of the unit when said mounting element is in one of its inclined adjusted positions, and means for locking said instrument holding element in a selected position of adjustment.

2,474,197
ELECTROMAGNETIC SOUND POWERED TELEPHONE
Glenn L. Dimmick, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 31, 1940, Serial No. 338,057
5 Claims. (Cl. 179—115)



1. A telephonic transducer comprising a vibratile member, an electromechanical unit including a movable element, and means coupling said movable element to said vibratile member, said means having an axis of motion and being movable freely along said axis, and said means having an accordion-like compliance therein symmetrical with respect to its said axis.

2,474,198
MOISTURE CONTENT-TEMPERATURE CORRELATION IN A MOVING BED CATALYST REGENERATION PROCESS
Russell Lee, Wenonah, and Frederick E. Ray, Mantua, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application September 16, 1944, Serial No. 554,554
3 Claims. (Cl. 252—418)

1. A method of regenerating an adsorptive contact mass material contaminated with a hydrogen-containing combustible carbonaceous deposit, said contact mass material being susceptible to damage at a temperature greater than about 1050°–1100° F. in the presence of a gas containing more than about 8–10 per cent of water vapor and being capable of withstanding without appreciable damage a temperature of about 1300°–1400° F. in the presence of combustion supporting gas containing not more than 5 per cent of water vapor, which comprises contacting at a temperature of about 750°–800° F. an adsorptive contact mass material contaminated with a hydrogen-containing combustible carbonaceous deposit with a combustion sustaining gas containing more

than about 8–10 per cent of water vapor, raising the temperature of said contaminated contact mass to about 900°–1100° F., and maintaining said contact mass at about 900°–1100° F. whilst in contact with combustion gas containing more than about 8–10 per cent of water vapor, and thereafter when the water vapor content of the effluent flue gas is not in excess of about 5 per cent maintaining the temperature of said contact mass material within the range of about 1000°–1400° F. until said contact mass material is regenerated.

2,474,199
METHOD FOR CONTACTING GASES AND MOVING PARTICLE FORM SOLIDS
Charles H. Lechthaler, John W. Payne, and Peter D. Valas, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application November 9, 1944, Serial No. 562,724
9 Claims. (Cl. 34—31)

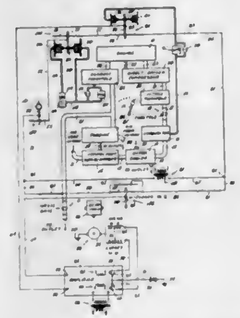
1. A method for drying a particle form adsorbent solid material of the type adapted for use in the catalytic conversion of hydrocarbons at elevated temperatures comprising passing the particle form solid material substantially vertically through a drying zone as a substantially compact column of downwardly flowing solid material, and passing a drying gas horizontally through said column at a substantially uniform rate throughout the entire column cross-section within said drying zone, ascertaining the amount of moisture picked up by said gas per unit weight thereof on a bone dry basis and ascertaining the maximum possible amount of moisture which could be picked up by said gas if it were discharged from said column saturated with moisture at the same conditions of temperature and pressure, regulating the rate, temperature and pressure of gas flow through said column to limit the percentage humidity in the outlet gas substantially below 100% and to limit the difference between the amount of moisture in a unit weight of outlet gas and the amount of moisture in a unit weight of inlet gas on the basis of bone dry gas to less than said about one-fourth of said maximum possible amount of moisture pick up.

2,474,200
CERVICAL SPLINT
Lance T. McBee, Paris Island, S. C.
Application July 19, 1946, Serial No. 684,703
13 Claims. (Cl. 128—87)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

13. A cervical brace comprising upper torso engaging means, support means mounted on said upper torso engaging means, neck receiving means mounted on the said support means for free rotary movement relatively to the said support means in a predetermined path in a plane disposed to intersect the vertical axis of the neck

of the wearer when the wearer of the brace is in upright position, and head engaging and supporting means on said freely rotatable neck receiving means and rotatable therewith relatively to the said support means.

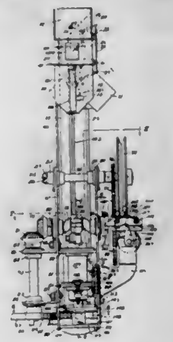
2,474,201
METHOD OF MAKING MICROPOROUS SHEET MATERIAL
James J. Raymond, Newburgh, N. Y., and William H. Lehmberg, Riverside, Conn., assignors to American Felt Company, Boston, Mass., a corporation of Massachusetts
Application July 4, 1945, Serial No. 603,148
3 Claims. (Cl. 154—33)



1. A method of making microporous sheet material, which includes the steps of felting selected loose wool fibres into interlocking relation in a felt sheet, filling the felt sheet under pressure with an uncured elastomer and thereby producing a solid self-sustaining matrix with the wool fibres solidly embedded therein, curing the elastomer filling of the sheet, and then dissolving the wool fibre, thereby producing a flexible sheet of chamois-like texture having pores left by the fibres removed from the otherwise solid matrix.

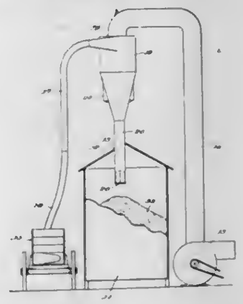
2,474,202
QUATERNARY AMMONIUM COMPOUNDS AND THE PROCESS OF MAKING SAME
John B. Rust, Montclair, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey
No Drawing. Application January 10, 1946, Serial No. 640,373
10 Claims. (Cl. 260—404.5)

1. The process of making a quaternary ammonium compound which comprises heating, at between about 150° and 300° C. in the presence of an acid condensing agent, a mixture of a polyamine $H(NHR)_xNH_2$, where R is an alkylene radical and x is a number from 1 to 6, a fatty acid having more than 6 carbon atoms and an alcoholic compound condensable with said polyamine, said alcoholic compound being of higher boiling point than water and having the formula $R'(OH)_y$ where R' is a hydrocarbon radical and y a number from 1 to 4 inclusive, and then adding to the tertiary amino-amide compound thus formed an inorganic acid reaction product selected from the group consisting of alkyl halides, aralkyl halides, alkyl sulfates and alkyl phosphates, and heating at a lower temperature; the proportions being 1 mole of polyamine, from 1 to x moles of fatty acid, sufficient alcoholic compound to react with the remaining replaceable hydrogens of the polyamine, and from 1 equivalent weight to 1 mole of said inorganic acid reaction product per tertiary-amino group of the amino-amide compound.



2,474,203
CONTROL APPARATUS
Hubert T. Sparrow, Minneapolis, Minn., and Albert E. Baak, Los Angeles, Calif., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application February 22, 1943, Serial No. 476,798
21 Claims. (Cl. 230—5)

1. Apparatus for controlling the pressure of the air supplied to an engine having a combustion chamber provided with a turbine-driven compressor for supplying air to said engine, comprising in combination, a device responsive to the pressure of the air supplied by the compressor, a device mechanically connected to and driven by the turbine responsive to the acceleration of said turbine, and means including both said devices for controlling the compressing effect of said compressor in such a manner as to limit both the pressure of the air supplied by said compressor and the acceleration of said compressor.



2,474,204
MOISTURE TESTER FOR CONTROLLING RECIRCULATION OF MATERIAL IN DRYING APPARATUS
Albert B. Welty, Moline, Ill., assignor to International Harvester Company, a corporation of New Jersey
Original application March 27, 1944, Serial No. 528,255. Divided and this application June 8, 1945, Serial No. 598,315
3 Claims. (Cl. 34—56)

3. In combination with a moisture tester for cereals and the like material having periodically operating movable means to compress a sample thereof taken periodically from a source of continuously flowing stream of material coming from a drier, a pair of diverging spouts positioned to route said stream of material including a movable diverter valve operable between the spouts to cause the material to flow through one spout or the other depending upon the position of said

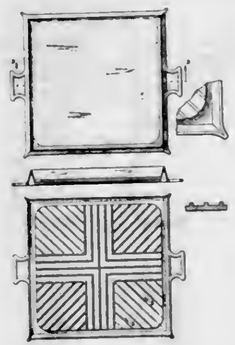
valve, means connected with the valve to operate the same, and means automatically responsive to a predetermined degree of movement of said movable compressing means to actuate said valve operating means, whereby when the sample is compressed sufficiently to indicate too high a moisture content for safe storage the diverter valve routes the material for additional drying.

2,474,205
PNEUMATIC GRAIN ELEVATOR
Albert B. Welty, Moline, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application November 14, 1945, Serial No. 628,410
2 Claims. (Cl. 302—59)

1. A pneumatic grain elevator having a grain engaging conduit, a source of suction, a suction conduit joining said source of suction to said grain engaging conduit, an enlarged chamber in the suction conduit intermediate the source of suction and the grain engaging conduit, means for discharging grain from said enlarged cham-

ber, said means including an open sided receptacle having a bottom plate larger in cross section than the open sided portion, said enlarged chamber having an aperture in the bottom thereof for receiving the open sided receptacle, the large bottom of the receptacle adapted to fully close said aperture when in its uppermost position, an adjustable yieldable suspension means for said receptacle normally holding said receptacle in its uppermost and aperture closing position and adapted to yield downwardly upon a quantity of grain reaching some predetermined weight within the receptacle, said suspension means comprising a hook on the top of the receptacle, a rod hooked thereto and extending upwardly, a spring attached to said rod, and a rod on the other side of said spring and having threads along its upper end, said rod extending through said suction conduit and having a nut threadedly engaging said rod on the outside of said conduit for up or down adjustment and a direct change in spring tension.

DESIGNS

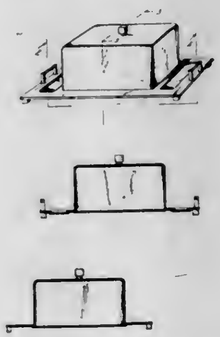


JUNE 21, 1949

154,194
DESIGN FOR A DOLL
Emile L. Adams, Piedmont, Calif., assignor of one-half to Ernest E. Adams, Piedmont, Calif.
Application August 21, 1947, Serial No. 140,981
Term of patent 3½ years
(Cl. D34—4)

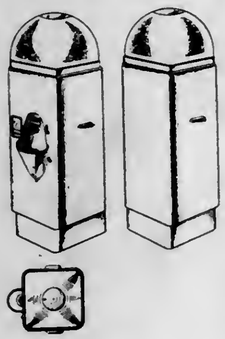
The ornamental design for a doll, substantially as shown and described.

154,195
DESIGN FOR A COMBINATION GRIDDLE AND SKILLET
Arthur Beck, Chicago, Ill.
Application November 12, 1947, Serial No. 142,467
Term of patent 14 years
(Cl. D44—1)



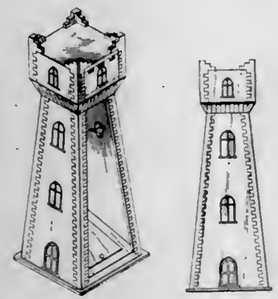
The ornamental design for a combination griddle and skillet, as shown and described.

154,196
DESIGN FOR A DECANTER
Jesse H. Clark and Harper Richards, Chicago, Ill., assignors to Cory Corporation, Chicago, Ill. a corporation of Delaware
Application July 26, 1947, Serial No. 140,534
Term of patent 3½ years
(Cl. D44—21)



The ornamental design for a decanter, as shown.

154,197
DESIGN FOR A CAKE CHEST OR SIMILAR ARTICLE
Maxine S. Dumke, near Fontana, Calif.
Application November 17, 1947, Serial No. 142,572
Term of patent 7 years
(Cl. D44—5)



The ornamental design for a cake chest or similar article, substantially as shown.

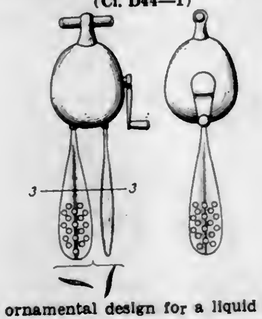
154,198
DESIGN FOR A POPCORN VENDING MACHINE
Frank P. Emerson, Los Angeles, Calif.
Application May 31, 1946, Serial No. 130,272
Term of patent 14 years
(Cl. D52—3)

The ornamental design for a popcorn vending machine, substantially as shown.

154,199
DESIGN FOR A CLOTHES AND SHOE CABINET OR THE LIKE
Augusta P. Finkelstein, Woonsocket, R. I.
Application March 25, 1947, Serial No. 137,877
Term of patent 7 years
(Cl. D33—8)

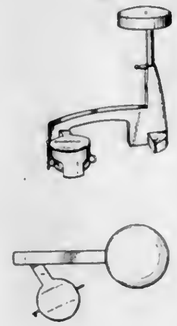
The ornamental design for a clothes and shoe cabinet or the like, as shown and described.

154,200
DESIGN FOR A CLOTHESPIN BAG OR SIMILAR ARTICLE
Pauline Gold, Hillside, N. J.
Application December 18, 1947, Serial No. 143,197
Term of patent 14 years
(Cl. D87—5)



The ornamental design for a clothes pin bag or similar article, as shown.

154,201
DESIGN FOR A DRESS
Samuel J. Goldfarb, New York, N. Y.
Application August 22, 1947, Serial No. 140,992
Term of patent 14 years
(Cl. D3—26)

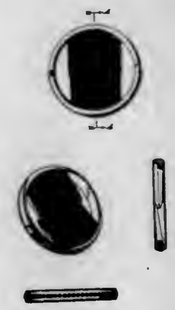


The ornamental design for a dress, as shown.

154,202
DESIGN FOR A LIQUID BEATER
Junius O. Hutton, Chevy Chase, Md.
Application December 12, 1946, Serial No. 135,434
Term of patent 7 years
(Cl. D44—1)

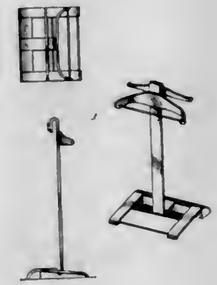
The ornamental design for a liquid beater, as shown.

154,203
DESIGN FOR A COMBINED OPERATOR'S STOOL AND CONTROL FOR DENTAL CHAIRS
Carroll W. Johnson, Chicago, and John T. Clark, Cicero, Ill.
Application August 25, 1947, Serial No. 141,062
Term of patent 14 years
(Cl. D15—3)



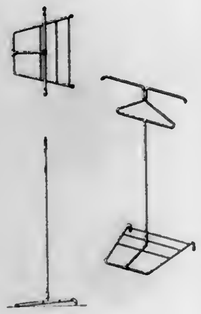
The ornamental design for a combined operator's stool and control for dental chairs, as shown.

154,204
DESIGN FOR A CONTAINER CAP
Albert H. Jung, Flushing, N. Y., assignor to Victor Metal Products Corporation, Brooklyn, N. Y., a corporation of New York
Application January 11, 1947, Serial No. 136,096
Term of patent 14 years
(Cl. D58—26)



The ornamental design for a container cap substantially as shown.

154,205
DESIGN FOR A RING COMB
Stella Kovacs and Derman J. Fulkerson, Dearborn, Mich., assignors to Paragon Products Company, Detroit, Mich., a corporation of Michigan
Application April 30, 1948, Serial No. 146,078
Term of patent 14 years
(Cl. D86—8)

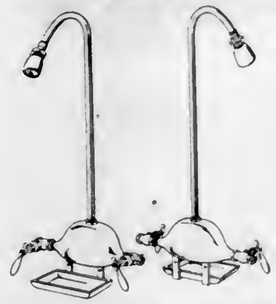


The ornamental design for a ring comb, substantially as shown.

154,206
DESIGN FOR A CLOTHES HANGER
Frank B. Kraus, New York, N. Y.
Application August 2, 1947, Serial No. 140,675
Term of patent 3½ years
(Cl. D33—8)

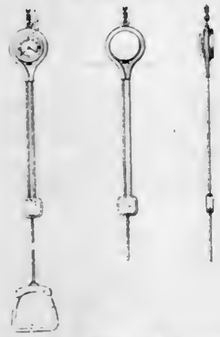
The ornamental design for a clothes hanger, as shown.

154,207
DESIGN FOR A GARMENT HANGER
Frank B. Kraus, New York, N. Y.
Application August 2, 1947, Serial No. 140,676
Term of patent 3½ years
(Cl. D33—8)



The ornamental design for a garment hanger, as shown.

154,208
DESIGN FOR A TEXTILE FABRIC
Libby MacGregor, New York, N. Y.
Application January 2, 1948, Serial No. 143,526
Term of patent 3½ years
(Cl. D92—1)



The ornamental design for a textile fabric, substantially as shown and described.

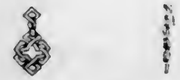
154,209
DESIGN FOR A SHOWER FIXTURE
Walter H. Meirink, Belleville, Ill.
Application November 17, 1947, Serial No. 142,579
Term of patent 14 years
(Cl. D91—3)

The ornamental design for a shower fixture, as shown.

154,210
DESIGN FOR A COMBINED EXTENSION KEY CHAIN AND WATCH
Nathaniel N. Okun, Far Rockaway, N. Y.
Application November 10, 1948, Serial No. 149,557
Term of patent 14 years
(Cl. D17—14)

The ornamental design for a combined extension key chain and watch, as shown.

154,211
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 22, 1949, Serial No. 393
Term of patent 7 years
(Cl. D45—9)

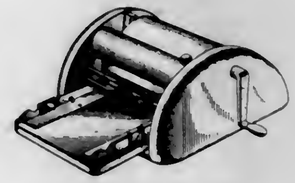


The ornamental design for an earring or similar article, substantially as shown.

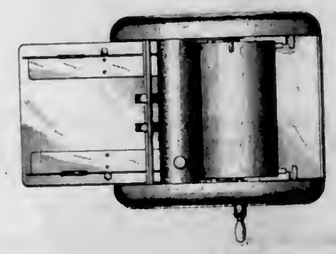
154,212
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 25, 1949, Serial No. 469
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

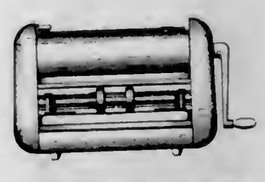
154,213
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application January 28, 1949, Serial No. 544
Term of patent 7 years
(Cl. D45—9)

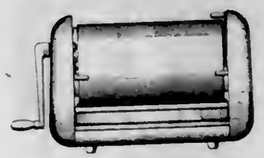


The ornamental design for an earring or similar article, substantially as shown.



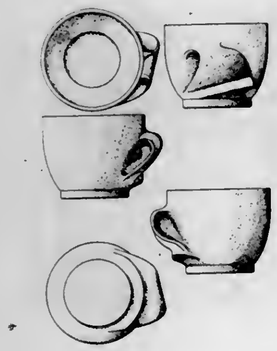
154,214
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application February 18, 1949, Serial No. 945
Term of patent 7 years
(Cl. D45—19)





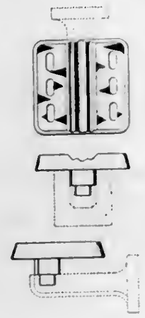
The ornamental design for a brooch or similar article, substantially as shown.

154,215
DESIGN FOR A DUPLICATING MACHINE
Robert Warren Quirk, Chicago, Ill., assignor to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
Application November 26, 1948, Serial No. 149,845
Term of patent 14 years
(Cl. D64—11)



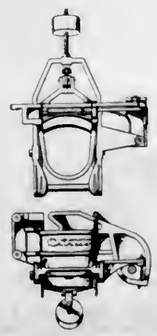
The ornamental design for a duplicating machine, substantially as shown.

154,216
DESIGN FOR A PAPER DISH
James D. Reifsnyder, Flushing, N. Y., assignor to Lily-Tulip Cup Corporation, New York, N. Y., a corporation of Delaware
Application December 31, 1946, Serial No. 135,882
Term of patent 14 years
(Cl. D44—9)



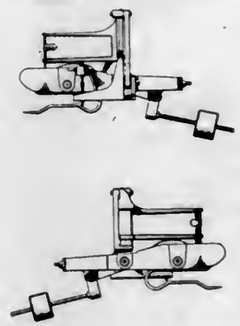
The ornamental design for a paper dish, substantially as shown.

154,217
DESIGN FOR A DINNER CUP
Helen A. Roberts, Buffalo, N. Y.
Application January 26, 1948, Serial No. 144,025
Term of patent 14 years
(Cl. D44—9)



The ornamental design for a dinner cup, as shown.

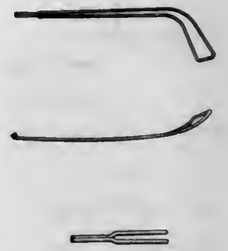
154,218
DESIGN FOR A COMBINED TOOTHBRUSH AND TOOTH PASTE HOLDER OR SIMILAR ARTICLE
Howard R. Sigler, Argenta, and Carl A. Laystrom, Decatur, Ill., assignors, by mesne assignments, to Fairies Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application December 13, 1947, Serial No. 143,124
Term of patent 14 years
(Cl. D4—3)



The ornamental design for a combined toothbrush and tooth paste holder or similar article, as shown and described.

154,219
DESIGN FOR A BAGGING MACHINE
Paul L. Snyder and Cecil Miller, Pomona, Calif.
Application January 19, 1948, Serial No. 143,884
Term of patent 14 years
(Cl. D55—1)

154,219—Continued



The ornamental design for a bagging machine, substantially as shown and described.

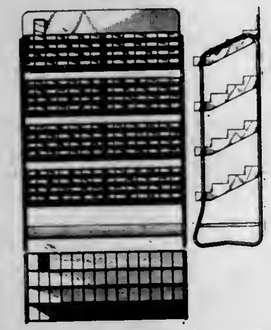
154,220
DESIGN FOR A COASTER
Thomas A. Steeds, Cleveland Heights, and Robert C. Prall, University Heights, Ohio; said Prall assignor to said Steeds
Application April 20, 1946, Serial No. 128,816
Term of patent 7 years
(Cl. D44—10)

The ornamental design for a coaster, as shown.

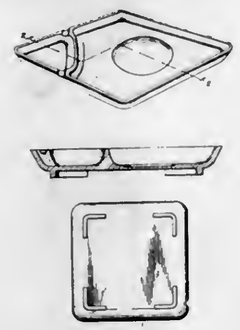
154,221
DESIGN FOR A SPECTACLE TEMPLE
Raymond F. E. Stegeman, Greece, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application April 16, 1948, Serial No. 145,779
Term of patent 14 years
(Cl. D57—1)

The ornamental design for a spectacle temple, as shown.

154,222
DESIGN FOR A FEET EQUIPPED OUTER GARMENT
Edward E. Tanner, Jr., Chicago, Ill.
Application July 28, 1947, Serial No. 140,562
Term of patent 14 years
(Cl. D3—17)

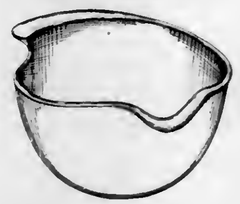


154,222—Continued



The ornamental design for a feet equipped outer garment, substantially as shown.

154,223
DESIGN FOR A MERCHANDISE DISPLAY RACK
Edward F. Todd, Highland Park, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application December 20, 1946, Serial No. 135,633
Term of patent 14 years
(Cl. D80—9)



The ornamental design for a merchandise display rack, as shown.

154,224
DESIGN FOR A COMBINED ASH TRAY AND SAUCER
Oren C. Tweet, Astoria, Oreg.
Application October 29, 1946, Serial No. 134,355
Term of patent 7 years
(Cl. D44—10)

The ornamental design for a combined ash tray and saucer, as shown.

154,225
DESIGN FOR A MIXING BOWL
Herbert H. Varney, Red Wing, Minn.
Application December 18, 1947, Serial No. 143,200
Term of patent 3½ years
(Cl. D44—10)

The ornamental design for a mixing bowl, substantially as shown.

Cleaning, washing, and scouring preparation. B. Heller & Company. 193,789, Jan. 8, 1925. Republished June 21.
Compounds for dissolving grease and oil. Moto-Sway Corporation of America. 511,412, June 21; Serial No. 548,988, published Mar. 15, 1949.
Filler, Leather belt. J. A. Webb Belting Co., Inc. 234,922, Nov. 8, 1927. Republished June 21.
Preparation in liquid, cream, and paste form for cleaning and polishing shoes. Griffin Manufacturing Company, Inc. 511,385, June 21; Serial No. 547,338, published Mar. 15, 1949.
Preparation in liquid form for washing cages and perches. Spratt's Patent (America) Limited. 259,759, renewed Aug. 6, 1949. O. G. June 21.
Soap. McCoy, Jones & Westlake, Inc. 347,384, June 22, 1937. Republished June 21.
Soap. The M. Werk Company. 511,301, June 21; Serial No. 540,948, published Sept. 14, 1948.
Soap, Toilet. Muhlens & Kropff. 72,521, re-renewed Feb. 2, 1949. O. G. June 21.
Soaps. Ernst Bischoff Co. Inc. 259,977, renewed Aug. 13, 1949. O. G. June 21.
Soaps. P. P. Mulhens. 250,565, renewed Dec. 11, 1948. O. G. June 21.
Stones, Abrasive resurfacer. Ideal Industries, Inc. 432,605, Sept. 9, 1947. Republished June 21.
Washing powder. B. Heller & Company. 200,874, July 7, 1925. Republished June 21.

CLASS 5

Cement, Leather-belt, both general and waterproof. J. A. Webb Belting Co., Inc. 235,535, Nov. 22, 1927. Republished June 21.
Paste suitable for use with wall paper and like products. Iago Wall Paper Corporation. 422,467, July 23, 1946. Republished June 21.

CLASS 6

Bate for leather and skins, Artificial. Société Rapidase. 253,493, renewed Feb. 26, 1949. O. G. June 21.
Bleach solution, Laundry. Glo-Rite Chemical Company. 442,906, June 21; Serial No. 484,838, published Dec. 17, 1946.
Bluing, Concentrated liquid laundry. B. Heller & Company. 334,601, May 12, 1936. Republished June 21.
Chemical dressstuffs. Fairy Dyes Limited. 442,948, June 21; Serial No. 520,501, published Mar. 8, 1949.
Chemical preparation. B. Heller & Company. 172,347, Aug. 28, 1923. Republished June 21.
Chemical preparation. B. Heller & Company. 189,403, Sept. 16, 1924. Republished June 21.

Chemical preparation for use in curing meat. B. Heller & Company. 386,263, Apr. 1, 1941. Republished June 21.
Chemicals. Algin Products Corporation. 261,692, renewed Sept. 24, 1949. O. G. June 21.
Citric acid. Hawaiian Pineapple Company, Ltd. 511,246, June 21; Serial No. 537,454, published Mar. 8, 1949.
Coca and quinine syrup, rubbing alcohol compound, etc. Louisiana Drug Company, Inc. 511,434, June 21; Serial No. 551,116, published Mar. 8, 1949.
Coloring pigment dispersed in a soluble base. Harwick Standard Chemical Company. 511,127, June 21; Serial No. 513,885, published Mar. 8, 1949.
Condensation products of phenol and formaldehyde. L. H. Baekeland. 75,266, re-renewed Sept. 14, 1949. O. G. June 21.
Cosmetic preparations. Carrel, Ltd. 426,337, Dec. 24, 1946. Republished June 21.
Cream, Eyelid, and eye lotion. Beautymasters of Beverly Hills, Inc. 511,428, June 21; Serial No. 550,301, published Mar. 8, 1949.
Dentifrice. Albert L. Calder Company, Incorporated. 323,972, May 7, 1935. Republished June 21.
Dentifrices. E. Fougera & Co., Inc. 260,780, renewed Aug. 27, 1949. O. G. June 21.
Deodorant. Walgreen Co. 353,557, Jan. 11, 1938. Republished June 21.
Developers, Photographic. Eastman Kodak Company. 249,625, Nov. 20, 1928. Republished June 21.
Diuretic preparations. Byk-Guldenwerke Chemische Fabrik Aktiengesellschaft. 252,503, renewed Feb. 12, 1940. O. G. June 21.
Douche powder, Therapeutic. Ortho Products, Inc. 413,789, May 15, 1945. Republished June 21.
Eau de cologne water, perfumery, hair tonics, etc. P. P. Mulhens. 250,322, renewed Dec. 4, 1948. O. G. June 21.

Silicate of soda. Philadelphia Quartz Company. 511,387, June 21; Serial No. 547,401, published Mar. 8, 1949.
Starch, Liquid. Chemicals, Inc. 440,182, Aug. 17, 1948. Republished June 21.
Sun tan liquid. Walgreen Co. 416,611, Sept. 25, 1945. Republished June 21.
Syrup, Pectoral. Drug Products Co. Inc. 254,866, renewed Apr. 2, 1949. O. G. June 21.
Tonic builder, General. Intravenous Products Co. of America, Inc. 206,389, Jan. 14, 1930. Republished June 21.
Vaginal creams and jellies. Ortho Products, Inc. 390,141, Sept. 9, 1941. Republished June 21.
Vaginal douche. Ortho Pharmaceutical Corporation. 423,077, Aug. 20, 1946. Republished June 21.
Vaginal jelly, Antiseptic. C. B. Hagaman. 381,872, Oct. 15, 1940. Republished June 21.
Veterinarian remedy. M. McGillicuddy. 511,431, June 21; Serial No. 550,537, published Mar. 8, 1949.
Vitamin composition. William R. Warner & Co., Inc. 442,922, June 21; Serial No. 511,122, published Feb. 1, 1949.

Vitamin preparation in capsule form. A. H. Robins Company. 511,471, June 21; Serial No. 557,466, published Aug. 17, 1948.
Vitamin preparation, Therapeutic. Cerophyl Laboratories, Inc. 395,893, June 16, 1942. Republished June 21.
Vitamin preparation, Therapeutic. Cerophyl Laboratories, Inc. 397,420, Sept. 8, 1942. Republished June 21.
Vitamin preparations. Valentine Laboratories, Inc. 402,123, June 29, 1943. Republished June 21.

CLASS 7

Ribbon made of rayon and cellophane, etc. Fibre Cord Division of Kary-Safe Paper Bag Co., Inc. 442,938–9, June 21; Serial Nos. 518,288–9, published Feb. 17, 1948.
Rope and twine, Fiber. John Flocker and Company. 511,156, June 21; Serial No. 527,017, published Feb. 22, 1949.
Rope, Manilla. The Edwin H. Fitler Co. 511,511, June 21; Serial No. 542,199.
Rope, Wire. Macwhyte Company. 511,202, June 21; Serial No. 533,331, published Feb. 22, 1949.
Slings formed of wire rope or cable. Union Wire Rope Corporation. 511,483, June 21; Serial No. 559,190, published Feb. 8, 1949.
Twine. Chase Bag Company. 511,477, June 21; Serial No. 558,488, published Feb. 8, 1949.

CLASS 10

Fertilizer. The Barrett Company. 367,134, May 9, 1939. Republished June 21.
Fertilizer and fertilizer materials. Wilson & Toomer Fertilizer Co. 319,510, Nov. 27, 1934. Republished June 21.
Fertilizers. Virginia-Carolina Chemical Company. 75,327, re-renewed Sept. 21, 1949. O. G. June 21.
Fertilizers and fertilizer materials. Wilson & Toomer Fertilizer Co. 279,041, Jan. 20, 1931. Republished June 21.
Fertilizers, Chemical. The Barrett Company. 319,532, Nov. 27, 1934. Republished June 21.

CLASS 12

Awnings, Metal or wood Venetian blind type of. H. L. Johnson. 511,500, June 21; Serial No. 502,697.
Cement, Portland. Volunteer Portland Cement Company. 261,810–11, renewed Sept. 24, 1949. O. G. June 21.
Compound for sealing of expansion or contraction joints in concrete road, street, and airport pavements. The Flintkote Company. 438,254, Apr. 13, 1948. Republished June 21.
Lumber. Cadwallader-Gibson Co., Inc. 212,065, Apr. 27, 1926. Republished June 21.
Lumber. Cadwallader-Gibson Co., Inc. 212,079–80, Apr. 27, 1926. Republished June 21.
Lumber. Cadwallader-Gibson Co., Inc. 215,861, July 27, 1926. Republished June 21.
Machined or polished blocks or slabs of granite. E. L. Smith & Co. 351,631, Nov. 2, 1937. Republished June 21.
Marble, Processed black. Vermont Marble Company. 511,466, June 21; Serial No. 556,736, published Mar. 8, 1949.
Marble, Processed gray. Vermont Marble Company. 511,465, June 21; Serial No. 556,735, published Mar. 8, 1949.
Mixture of aggregate bonded with asphalt. Andresen Corporation. 511,126, June 21; Serial No. 513,285, published Feb. 22, 1949.
Molding strips, Plain and grooved metallic, and trimming ribbon elements. The Colotrym Company. 511,227, June 21; Serial No. 536,587, published Mar. 8, 1949.
Plaster, Wall. Nu-Wall Manufacturing Company. 442,970, June 21; Serial No. 485,263.
Porcelain materials, Light gauge non-carbon steel. Higgins Industries, Inc. 434,666, Dec. 2, 1947. Republished June 21.
Roofing and siding, Corrugated steel sheet. Granite City Steel Company. 511,527, June 21; Serial No. 556,439.
Roofing, Composition roll, composition shingles and strip shingles, waterproof roofing and building paper. The Flintkote Company. 250,528, Dec. 11, 1928. Republished June 21.
Roofing shingles, Asphaltic composition. The Flintkote Company. 248,265, Oct. 16, 1928. Republished June 21.
Roofing shingles, Asphaltic composition. The Flintkote Company. 248,278, Oct. 16, 1928. Republished June 21.
Roofing shingles, Asphaltic composition. The Flintkote Company. 250,643, Dec. 11, 1928. Republished June 21.
Sealing compounds, Non-hardening plastic. Greene, Tweed & Co. 511,271, June 21; Serial No. 538,531, published Mar. 8, 1949.
Shutters, Metallic. J. E. Bush. 511,440, June 21; Serial No. 532,634, published Mar. 1, 1949.
Spackling compound. Rutland Fire Clay Company. 511,308, June 21; Serial No. 541,188, published Mar. 8, 1949.
Stones and artificial stones for building purposes, cement, lime, etc. Chemische Fabrik Gruenau Landshoff & Meyer Aktiengesellschaft. 284,005, renewed Mar. 12, 1949. O. G. June 21.

CLASS 13

Chains. The Billings & Spencer Company. 511,343, June 21; Serial No. 543,352, published Mar. 8, 1949.
Chains. Peerless Chain Company. 511,304, June 21; Serial No. 533,607, published Mar. 1, 1949.
Closers, Door. Norton Lasier Company. 511,172, June 21; Serial No. 530,088, published Mar. 8, 1949.
Fittings, Metal pipe. The Cleveland Heater Company. 317,539. Sept. 25, 1934. Republished June 21.
Flush tank balls. Scully Rubber Manufacturing Co. 511,513, June 21; Serial No. 544,118.
Hooks, hitches, and clamps. Interlock Corporation. 511,327, June 21; Serial No. 542,319, published Mar. 8, 1949.
Pipe and fittings therefor, Cast iron. American Cast Iron Pipe Company. 511,273, June 21; Serial No. 538,702, published Mar. 8, 1949.
Seats, Toilet. Sperzel Company. 511,187, June 21; Serial No. 531,625, published Feb. 22, 1949.
Ship-rivets. The Townsend Company. 124,790, Mar. 11, 1919. Republished June 21.
Spikes, Metal railway. Inland Steel Company. 511,254, June 21; Serial No. 537,800, published Mar. 8, 1949.
Spouts, Aluminum pouring. Seal-Spout Corporation. 511,207, June 21; Serial No. 533,929, published Mar. 1, 1949.
Steam traps, air traps, gasoline and oil pressure regulating valves, etc. Strong, Carlisle & Hammond Company. 511,247, June 21; Serial No. 537,485, published Mar. 8, 1949.
Unions and fittings, Pipe. Thornhill-Craver Company, Inc. 511,195, June 21; Serial No. 532,380, published Mar. 8, 1949.
Unions, Pipe, thread protectors, clamp handles, etc. Well Equipment Mfg. Corp. 442,944–5, June 21; Serial Nos. 520,073–4, published Mar. 1, 1949.
Utensils, Stainless steel cooking. Peter-Foti. 511,189, June 21; Serial No. 531,942, published Mar. 8, 1949.
Valve caps, Tire, and tire valve cores. The Pep Boys, Manny, Moe & Jack. 511,234, June 21; Serial No. 536,949, published Mar. 8, 1949.
Washers, Lock, and screw and lock washer assemblies. Eaton Manufacturing Company. 511,515, June 21; Serial No. 545,972.

CLASS 14

Fittings and alloys, Metallic. The Patrol Valve Company. 430,964, Aug. 3, 1948. Republished June 21.
Iron and steel. Lebanon Steel Foundry. 261,563, renewed Sept. 17, 1949. O. G. June 21.

CLASS 16

Calcimine. F. J. Cooledge & Sons, Inc. 330,315, Nov. 26, 1935. Republished June 21.
Cleaning and polishing fluid. Western Auto Supply Company. 442,907, June 21; Serial No. 487,284, published Mar. 15, 1949.
Coating composition, Liquid. Stetson Paint & Varnish Company. 511,292, June 21; Serial No. 539,777, published Feb. 8, 1949.
Coating compositions, Synthetic resin. Monsanto Chemical Company. 511,344, June 21; Serial No. 543,509, published Mar. 15, 1949.
Coatings and finishes, Protective. Eastern States Paint and Varnish Company. 511,140, June 21; Serial No. 522,013, published Mar. 15, 1949.
Coatings and linings, Protective and corrosion-resistant. Hell Process Equipment Corp. 511,312, June 21; Serial No. 541,541, published Mar. 15, 1949.
Enamels, Paint. Armstrong Paint & Varnish Works. 511,260, June 21; Serial No. 538,076, published Mar. 15, 1949.
Oils for use on floors, furniture, and woodwork. The Pure Oil Company. 511,154, June 21; Serial No. 527,284, published Mar. 15, 1949.
Paint and paint enamel. Stetson Paint & Varnish Company. 511,291, June 21; Serial No. 539,772, published Mar. 15, 1949.
Paint and paint enamel in liquid form. Minnesota Linseed Oil Paint Company. 511,289, June 21; Serial No. 539,598, published Jan. 25, 1949.
Paint, Ready mixed, varnishes, and paint enamels. Armstrong Paint & Varnish Works. 511,250, June 21; Serial No. 538,066, published Mar. 15, 1949.
Paint sold in liquid form. Patek Brothers, Inc. 511,224, June 21; Serial No. 536,429, published Mar. 15, 1949.
Paints, Enamel, ready-mixed paints, colors in oil, etc. F. H. Brown. 128,020, Dec. 23, 1919. Republished June 21.
Paints, Paste and ready-mixed, paint enamels, varnishes, etc. Grand Rapids Paint and Enamel Company. 255,844, renewed Apr. 30, 1949. O. G. June 21.
Paints, Ready-mixed and priming, paint enamels, varnishes, etc. Interchemical Corporation. 442,950, June 21; Serial No. 520,948, published Mar. 15, 1949.
Paints; varnishes; lacquers; etc. W. W. Lawrence & Company. 511,275, June 21; Serial No. 538,781, published Mar. 15, 1949.
Paints; varnishes; paint enamels; etc. W. W. Lawrence & Company. 511,274, June 21; Serial No. 538,772, published Mar. 15, 1949.
Polish, Furniture. H. H. Griffin. 511,378, June 21; Serial No. 546,992, published Mar. 15, 1949.

Seal and finish, Wood floor, liquid wood floor seal, etc. The Diversey Corporation. 511,211, June 21; Serial No. 534,882, published Mar. 15, 1949.
Shellac, Gasket; rubber based white tire coating, etc. John T. Stanley Company, Inc. 511,356, June 21; Serial No. 544,923, published Mar. 15, 1949.
Stains and paints, Wood. W. W. Lawrence & Company. 511,276, June 21; Serial No. 538,701, published Mar. 15, 1949.
Varnish. Armstrong Paint & Varnish Works. 511,261, June 21; Serial No. 538,078, published Mar. 15, 1949.
Varnish, paint, and paint enamel. Stetson Paint & Varnish Company. 511,293, June 21; Serial No. 539,788, published Mar. 15, 1949.
Varnish, ready-mixed paints, and paint enamels. F. J. Cooledge & Sons, Inc. 330,316, Nov. 26, 1935. Republished June 21.
Waxes, polishes, and oils, Floor. Janitors Supply House, Incorporated. 511,403, June 21; Serial No. 547,995, published Mar. 15, 1949.

CLASS 17

Cigars. Sociedad Anonima Romeo y Julieta, Fabrica de Tabacos. 238,275, renewed July 2, 1949. O. G. June 21.

CLASS 19

Automobiles. Overland Automobile Company. 72,436, Jan. 26, 1909. Republished June 21.
Sailboats. H. D. Brainard. 384,460, Jan. 21, 1941. Republished June 21.

CLASS 20

Coverings, Rubber floor. The Goodyear Tire & Rubber Company. 511,162, June 21; Serial No. 528,448, published Feb. 1, 1949.
Linoleum, oil cloth, and felt base, floor, wall, shelf, and furniture covering, etc. W. & J. Sloane. 442,959, June 21; Serial No. 525,038, published Jan. 25, 1949.
Tiles, Asphalt floor. Mastic Tile Corporation of America. 511,323, June 21; Serial No. 542,148, published Feb. 22, 1949.

CLASS 21

Batteries, Automobile. Laber Spring and Tire Corporation. 511,283, June 21; Serial No. 539,178, published Sept. 7, 1948.
Batteries, Storage. Continental Tire Corporation. 286,142, Aug. 18, 1931. Republished June 21.
Batteries, Storage. Prest-O-Lite Storage Battery Corporation. 261,105, Sept. 3, 1929. Republished June 21.
Cable, Bushed flexible metallic cable or conduit and flexible non-metallic cable conduit, or tube. 511,287, June 21; Serial No. 539,504, published Mar. 15, 1949.
Condensers, Ceramic. Erie Resistor Corporation. 440,661, Sept. 14, 1948. Republished June 21.
Conductors and cables, Insulated electrical. Noma Electric Corporation. 511,421, June 21; Serial No. 549,743, published Mar. 15, 1949.
Conductors, Electrical. Sprague Specialties Company. 404,942, Dec. 28, 1943. Republished June 21.
Controls for electric switches, Electric. The Federal Gauge Company. 245,654, Aug. 21, 1928. Republished June 21.
Dynamotors, generators, inverted rotary converters and motor generators. Pioneer Gen-E-Motor Corporation. 342,559, Jan. 19, 1937. Republished June 21.
Electrical apparatus. A. S. Aloe Company. 511,159–60, June 21; Serial Nos. 528,179–80, published Mar. 8, 1949.
Electrical apparatus. Electro Manufacturing Corporation. 511,165, June 21; Serial No. 528,950, published Mar. 15, 1949.
Fan and electric space heater, Combination electric. 511,168, June 21; Serial No. 529,069, published Dec. 14, 1948.
Floodlights, Electric. Benjamin Electric Manufacturing Company. 511,144, June 21; Serial No. 523,733, published Mar. 8, 1949.
Generators, electric motors, dynamotors, etc. Pioneer Gen-E-Motor Corporation. 358,949, July 26, 1938. Republished June 21.
Generators, electric motors, dynamotors, etc. Pioneer Gen-E-Motor Corporation. 411,610, Jan. 23, 1945. Republished June 21.
Generators, Electrostatic. High Voltage Engineering Corporation. 511,426, June 21; Serial No. 550,043, published Mar. 15, 1949.
Generators, motors, dynamotors, etc. Pioneer Gen-E-Motor Corporation. 353,098, Dec. 28, 1937. Republished June 21.
Heaters, Portable electric space. Trilling and Montague. 442,920, June 21; Serial No. 507,553, published Mar. 15, 1949.
Illuminating fixture, Electrical. Fairchild Camera & Instrument Corporation. 442,963, June 21; Serial No. 525,578, published Mar. 15, 1949.
Lantern, Electric. A. K. Williams. 511,407, June 21; Serial No. 548,204, published Mar. 15, 1949.
Light fixtures, Electric ornamental, electrically illuminated Christmas tree ornaments and electrically illuminated imitation candles. Burklite Mfg. Co., Inc. 511,818, June 21; Serial No. 541,915, published Mar. 15, 1949.
Lighting assemblies and parts thereof, Show-case. The Wadsworth Electric Mfg. Co., Inc. 306,466, Sept. 19, 1933. Republished June 21.
Lighting fixtures, Fluorescent electrically operated floor lamps, etc. Mitchell Manufacturing Company. 511,119, June 21; Serial No. 508,489, published Mar. 15, 1949.
Magneto-dynamo apparatus and small magnetos for lighting purposes. Magnetos Lucifer, Societe Anonyme. 442,913, June 21; Serial No. 497,317, published Mar. 8, 1949.
Motors, Electric. The Lincoln Electric Company. 511,810, June 21; Serial No. 541,309, published Mar. 8, 1949.
Pail, Electric. Electromaster, Inc. 511,256, June 21; Serial No. 537,883, published Mar. 8, 1949.
Phonographs and parts thereof, etc., Electrical. H. D. Parsons. 511,404, June 21; Serial No. 548,018, published Mar. 8, 1949.
Radio antenna. The Ward Products Corporation. 511,340, June 21; Serial No. 542,983, published Mar. 15, 1949.
Radio receiving sets. The Hallicrafters Co. 511,355, June 21; Serial No. 544,729, published Mar. 15, 1949.
Radio receiving sets and combination phonographs and radio receiving sets. General Phoenix Corporation. 511,320, June 21; Serial No. 542,110, published Mar. 15, 1949.
Radio-receiving sets, Cabinet and table model, etc. The Cussins and Fearn Company. 511,423, June 21; Serial No. 549,907, published Mar. 15, 1949.
Recording paper, Electro-sensitive facsimile. Finch Telecommunications, Inc. 511,424, June 21; Serial No. 549,919, published Mar. 8, 1949.
Reproducers. The Baldwin Company. 442,961, June 21; Serial No. 525,182, published Mar. 15, 1949.
Spark plugs. Auburn Spark Plug Co., Inc. 511,388, June 21; Serial No. 546,172, published Mar. 8, 1949.
Spotlights. Arnolt Corporation. 511,401, June 21; Serial No. 547,815, published Mar. 8, 1949.
Steamer, Electrically heated. The Tanglefoot Company. 511,265, June 21; Serial No. 538,196, published Mar. 8, 1949.
Switches, Electric, electric fuse boxes and combined switch and fuse block structures, etc. The Wadsworth Electric Mfg. Co. 390,004, Sept. 2, 1941. Republished June 21.
Toasters, Electric. The Toastswell Company, Incorporated. 511,332, June 21; Serial No. 542,491, published Mar. 15, 1949.
Transducers, Permanent magnet dynamic. Permoflux Corporation. 410,450, Nov. 28, 1944. Republished June 21, 1949.
Transducers, Permanent magnet dynamic. Permoflux Corporation. 410,463, Nov. 28, 1944. Republished June 21, 1949.
Transmitters, Radio, radio receivers, electrical oscillators, etc. Hazeltine Electronics Corporation. 511,114, June 21; Serial No. 480,462, published Mar. 8, 1949.
Welding guns and parts thereof, Electric stud. Nelson Specialty Welding Equipment Corporation. 442,911, June 21; Serial No. 466,097, published Mar. 8, 1949.
Wires for electrical connections, Lead. The Federal Gauge Co. 244,015, July 24, 1928. Republished June 21.

CLASS 22

Bowling alleys and parts thereof, bowling pin-setters and parts thereof, and newel posts for bowling ball racks. The Brunswick-Balke Collender Company. 405,385, Jan. 25, 1944. Republished June 21.
Fishing lines. United States Whip Company. 206,046, Nov. 24, 1925. Republished June 21.
Footballs and basketballs. Bay State Sports. 511,507, June 21; Serial No. 536,340.
Footballs, basketballs, soccer ball, etc. Olympic Sporting Goods Company, Inc. 511,519, June 21; Serial No. 550,825.
Golf bags. The Oshkosh Trunk Company. 250,566, renewed Dec. 11, 1948. O. G. June 21.
Golf balls. Walgreen Co. 368,093, June 6, 1939. Republished June 21.
Golf clubs. General Machine Company. 439,854, July 27, 1948. Republished June 21.
Toy vehicle, Child's. Martin Manufacturing Company. 511,508, June 21; Serial No. 540,084.

CLASS 23

Air cleaners for engines, dust separators, and classifiers. The United Specialties Company. 403,945, Oct. 26, 1943. Republished June 21.
Blades, Razor. Associated Merchandising Corporation. 511,266, June 21; Serial No. 538,342, published Mar. 8, 1949.
Chisels and screw drivers. The Stanley Works. 261,626, renewed Sept. 17, 1949. O. G. June 21.
Clippers, Electric hair. Electro Tool Corporation. 511,248, June 21; Serial No. 537,576, published Mar. 8, 1949.
Compressors for freezing liquids. Ed Friedrich, Inc. 353,085, Dec. 28, 1937. Republished June 21.
Cranes, Swinging or fixed boom mobile. The Hughes-Keenan Company. 511,214, June 21; Serial No. 535,037, published Mar. 1, 1949.
Cutters, Milling. Midwestern Tool Company. 433,556, Oct. 21, 1947. Republished June 21.

Engines, Internal combustion, and automotive accessories and parts. Carter Carburetor Corporation. 439,662, July 13, 1948. Republished June 21.
Fire-extinguishing apparatus, Portable hand. Du-Gas Fire Extinguisher Corporation. 279,372, Jan. 13, 1931. Republished June 21.
Holders for rotatably supporting drilling, boring, reaming, and tapping tools. McCrosky Tool Corporation. 442,932, June 21; Serial No. 516,089, published Mar. 1, 1949.
Lathes and screw machines, Automatic. Cone Automatic Machine Company Inc. 362,745, Nov. 29, 1938. Republished June 21.
Lawn mowers and parts thereof, Hand and engine driven, garden tractors, sprayers, and pumps. Pioneer-Gen-E-Motor Corporation. 418,507, Jan. 1, 1946. Republished June 21.
Lawn mowers, Power, hand lawn mowers, and garden tractors, and parts thereof. Pioneer Gen-E-Motor Corporation. 439,741–2, July 20, 1948. Republished June 21.
Machines for continuously gluing strips boards together. James L. Taylor Manufacturing Company. 442,929, June 21; Serial No. 514,915, published Mar. 1, 1949.
Motors, Individual outboard boat. Evinrude Motor Company. 256,522, renewed May 21, 1949. O. G. June 21.
Planes, Wood working. The Stanley Works. 261,590, renewed Sept. 17, 1949. O. G. June 21.
Rolls, Squeezing, constructed of rubber adapted for use chiefly in laundry and textile machines, paper machinery, etc. American Wringer Company, Inc. 259,193, renewed July 23, 1949. O. G. June 21.
Shovels, cranes, and drag lines, Gasoline. Speeder Machinery Corporation. 227,947, May 17, 1927. Republished June 21.
Tape-serving machines. Better Packages, Inc. 261,440, renewed Sept. 17, 1949. O. G. June 21.
Tools; machines. Perfect Circle Corporation. 511,241, June 21; Serial No. 537,231, published Mar. 8, 1949.
Tools, Pneumatic. Ideal Industries, Inc. 431,618, July 29, 1947. Republished June 21.
Turbine-pump heads, Deep-well. Peerless Pump Company. 258,321, renewed July 2, 1949. O. G. June 21.
Vending machines, Coin-controlled automatic food and commodity. A. H. T. Manufacturing Corporation. 440,352, Aug. 24, 1948. Republished June 21.

CLASS 25

Latches, Vehicle door. The American Swiss Company. 511,161, June 21; Serial No. 528,395, published Feb. 15, 1949.
Locks. Master Lock Company. 511,125, June 21; Serial No. 511,632, published Feb. 8, 1949.
Seals, Base metal. E. J. Brooks Company. 505,592, Jan. 11, 1949. Corrected. O. G. June 21.

CLASS 26

Goggles worn by swimmers, Under water. H. Schwartz. 442,971, June 21; Serial No. 487,338.
Ignition and control devices, Gas-range-burner. The Petrol Valve Company. 277,993, Dec. 2, 1930. Republished June 21.
Instruments for detecting the presence of flammable gases or vapors, Electrical. Jabes Burns & Sons, Inc. 439,677, July 13, 1948. Republished June 21.
Measuring instruments, Electronic, namely, volt-ohm-milliammeters. Electronic Measurements Corporation. 442,921, June 21; Serial No. 509,642, published Dec. 23, 1947.
Micrometers. J. T. Slocomb Company. 102,458, Feb. 9, 1915. Republished June 21.
Photographic equipment. Federal Manufacturing and Engineering Corp. 440,801, Sept. 28, 1948. Republished June 21.
Valves, Thermostatically-operated pressure-relief, thermostatically and pressure operated relief valves, etc. The Cleveland Heater Company. 256,688, renewed May 21, 1949. O. G. June 21.

CLASS 27

Clocks. Chelsea Clock Company. 258,353, renewed July 2, 1949. O. G. June 21.
Clocks and watches. The Western Clock Mfg. Co. 72,178, Jan. 5, 1909. Republished June 21.
Watches. Bulova Watch Company, Inc. 511,523, June 21; Serial No. 553,672.
Watches and parts of watches. Leonidas Watch Factory Vve. 226,196, Apr. 5, 1927. Republished June 21.
Watches and parts thereof. G. N. Wallace. 409,178–9, Sept. 19, 1944. Republished June 21.

CLASS 28

Clips, Money, necktie clasps, ornamental clips, etc. A. L. Levinson. 511,506, June 21; Serial No. 533,328.
Jewelry. Jack Kellmer Company. 442,936, June 21; Serial No. 517,139, published Aug. 31, 1948.
Jewelry. Mare's, Inc. 511,177, June 21; Serial No. 530,661, published Mar. 8, 1949.
Jewelry. Shiman Mfg. Co. Inc. 258,243, July 2, 1929. Republished June 21.
Jewelry and dress ornaments. Uncas Manufacturing Company. 511,512, June 21; Serial No. 542,695.
Necklaces, bracelets, rings, earrings, etc. Coro, Inc. 511,628, June 21; Serial No. 558,010.
Table ware, Silver, silver flatware, and silver hollow ware. Saks & Co. 250,908, renewed Dec. 18, 1948. O. G. June 21.
Watchstraps and watch bracelets. Leo Hellbrun Co., Inc. 511,505, June 21; Serial No. 531,798.

CLASS 29

Brooms. Atlantic Southwestern Broom Co. 511,367, June 21; Serial No. 546,276, published Jan. 11, 1949.
Brooms. Better Buy Wholesale Grocers. 511,142, June 21; Serial No. 522,187, published Feb. 22, 1949.
Brushes. Ox Fibre Brush Company, Inc. 511,362–3, June 21; Serial Nos. 546,759–60, published Jan. 11, 1949.
Brushes and brooms, toilet brushes, paint and varnish brushes, etc. Britton Brush Company Limited. 511,257, June 21; Serial No. 537,977, published Feb. 22, 1949.
Brushes, Artists'. M. Grumbacher Inc. 511,369, June 21; Serial No. 546,292, published Jan. 4, 1949.
Brushes, Hair. Lactona Incorporated. 511,333–6, June 21; Serial No. 542,595–8, published Jan. 4, 1949.
Brushes, Oval varnish. Whiting-Adams Company, Inc. 437,166, Mar. 9, 1948. Republished June 21.
Brushes, Paint. Delta Brush Mfg. Corp. 511,368, June 21; Serial No. 546,282, published Jan. 11, 1949.
Mops. California Cotton Mills Company. 511,351, June 21; Serial No. 544,262, published Jan. 4, 1949.

CLASS 31

Cabinets, Food freezer and frozen food storage. General Machine Company, Inc. 511,151, June 21; Serial No. 527,019, published June 1, 1948.
Coils, Refrigeration, ice-making coils, evaporative condensers, and freezing tunnels, etc. Refrigeration Engineering Inc. 442,910, June 21; Serial No. 495,191, published Mar. 8, 1949.
Compressors for freezing liquids. Ed Friedrich, Inc. 353,085, Dec. 28, 1937. Republished June 21.
Coolers, Dispensing. Glascock Brothers Mfg. Co. 306,811, Sept. 26, 1933. Republished June 21.
Engines, Internal combustion, and automotive accessories and parts. Carter Carburetor Corporation. 439,662, July 13, 1948. Republished June 21.
Filters, Engine oil. Business Collaborators, Incorporated. 511,152, June 21; Serial No. 527,234, published Mar. 8, 1949.
Filters, Oil. Wm. W. Nugent & Co., Inc. 511,249, June 21; Serial No. 537,610, published Mar. 8, 1949.
Refrigerators, water coolers, condensing units. Copeland Refrigeration Corporation. 511,244, June 21; Serial No. 537,426, published Mar. 8, 1949.
Vacuum precipitation process equipment. The Merrill Company. 511,294, June 21; Serial No. 539,971, published Mar. 8, 1949.

CLASS 32

Beds, bed springs, and mattresses. Southern Spring Bed Company. 261,690, renewed Sept. 24, 1949. O. G. June 21.
Blinds, Venetian. The Dickey Manufacturing Company. 511,230, June 21; Serial No. 536,770, published Mar. 8, 1949.
Chairs, Living room. T. Baumritter Co., Inc. 442,908, June 21; Serial No. 492,028, published Oct. 19, 1948.
Davenports, sofas, love seats, etc. S. Karpen & Bros. 511,324, June 21; Serial No. 542,209, published Mar. 1, 1949.
Furniture. Fort Smith Furniture Manufacturers' Company. 240,688, Apr. 3, 1928. Republished June 21.
Furniture. S. Karpen & Bros. 511,325, June 21; Serial No. 542,215, published Mar. 1, 1949.
Furniture, Household, and commercial lounge furniture. American Fixture and Manufacturing Co. 511,181, June 21; Serial No. 530,898, published Mar. 8, 1949.
Hassocks and slip covers. Crawford Manufacturing Co., Inc. 511,408, June 21; Serial No. 548,241, published Feb. 22, 1949.
Mattresses. The Stearns & Foster Company. 511,317, June 21; Serial No. 541,891, published Mar. 1, 1949.
Mirrors, Wall, hand mirrors, and mirrors in the nature of furniture. Semon Bache & Company. 511,386, June 21; Serial No. 547,384, published Mar. 8, 1949.
Racks, Letter, sorting tray, stationery separators, etc. Currier Manufacturing Co. 511,153, June 21; Serial No. 527,278, published Mar. 8, 1949.
Shades, Window. Joanna Western Mills Company. 511,233, June 21; Serial No. 536,793, published Mar. 8, 1949.
Springs, Box. Simmons Company. 511,415, June 21; Serial No. 549,283, published Mar. 8, 1949.
Stands, Smoking. Climax Machinery Company. 325,859, July 9, 1935. Republished June 21.
Wardrobes. J. S. Zibell. 511,175, June 21; Serial No. 530,276, published Mar. 1, 1949.

CLASS 33

Bottles, Glass beer. Brockway Glass Company, Inc. 381,448, Sept. 24, 1940. Republished June 21.
Tableware, Breakfast, luncheon, and dinner glass, and beverage glasses. Geo. Borgfeldt Corporation. 511,290, June 21; Serial No. 539,640, published Mar. 8, 1949.

CLASS 34

Air conditioning apparatus. The Cleveland Heater Company. 342,238, Jan. 12, 1937. Republished June 21.
Air conditioning units, coal fired, gas fired, and oil fired furnaces, burners, etc. Chrysler Corporation. 511,503, June 21; Serial No. 522,594.
Air conditioning units, coal fired, gas fired, and oil fired furnaces, burners, etc. Chrysler Corporation. 511,504, June 21; Serial No. 522,596.
Burners, Automatic coal. Iron Fireman Manufacturing Company. 252,678, renewed Feb. 12, 1940. O. G. June 21.
Heaters and their structural parts, Gas, oil, and vapor burning domestic hot-water-supply. The Cleveland Heater Company. 281,679, Mar. 24, 1931. Republished June 21.
Heaters and their structural parts, Gas, oil, and vapor burning water. The Cleveland Heater Company. 290,407–8, Jan. 5, 1932. Republished June 21.
Heaters, Gas, oil, and vapor burning water, hot-water heating systems, etc. The Cleveland Heater Company. 277,996, Dec. 2, 1930. Republished June 21.
Heaters, Hot-water, water-storage heaters, gas heating systems, etc. The Cleveland Heater Company. 214,345, June 22, 1926. Republished June 21.
Ignition and control devices, Gas-range-burner. The Petrol Valve Company. 277,993, Dec. 2, 1930. Republished June 21.

CLASS 35

Belting. The Goodyear Tire & Rubber Company. 97,840, June 23, 1914. Republished June 21.

Whiskey. Esbeco Distilling Corporation. 511,135, June 21; Serial No. 519,062, published Mar. 8, 1949.
Whiskey. Alexander McDougall & Co. Limited. 372,594–5, Nov. 7, 1939. Republished June 21.
Whiskey. Medley Distilling Company. 511,316, June 21; Serial No. 541,855, published Mar. 8, 1949.
Whiskey. National Distillers Products Corporation 511,376, June 21; Serial No. 546,509, published Feb. 8, 1949.
Whiskey, gin, rum, etc. Sanches Romate Hermanos, S. A. 442,931, June 21; Serial No. 515,761, published Feb. 22, 1949.
Whiskey, Scotch. T. & A. McClelland, Limited. 306,614, Sept. 26, 1933. Republished June 21.
Whisky, Blended Scotch. Hill, Thomson & Co. Limited. 511,381, June 21; Serial No. 547,118, published Feb. 8, 1949.
Whisky, Blended Scotch. Hill, Thomson & Co. Limited. 511,383, June 21; Serial No. 547,120, published Feb. 8, 1949.

CLASS 50

Granite monuments and memorials. E. L. Smith & Co. 351,377, Oct. 26, 1937. Republished June 21.
Traps, Animal. Animal Trap Company of America. 256,538, renewed May 21, 1949. O. G. June 21.

CLASS 55

Geophysical prospecting services. Seismograph Service Corporation. 511,405, June 21; Serial No. 533,403, published Mar. 15, 1949.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 21ST DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Dictograph Products Company, Inc., assignee: *See*—
Koch, Henry.

Du Pont, E. I., de Nemours and Company, assignee: *See*—
Gresham, William F.

Gresham, William F., Alapocas, assignor to E. I. du Pont de Nemours and Company, Wilmington, Del. Preparation of N-dimethylethanolamine. Re. 23,124, June 21.

Jet-Heet, Inc., assignee: *See*—
MacCracken, Calvin D.

Koch, Henry, Huntingdon, Pa., assignor to Dictograph Products Company, Inc., New York, N. Y. Bone conduction hearing aid. Re. 23,125, June 21.

MacCracken, Calvin D., New Rochelle, assignor to Jet-Heet, Inc., New York, N. Y. Air compressor. Re. 23,126, June 21.

Mathieson Chemical Corporation, assignee: *See*—
Weller, Joseph F.

Smidl, Joseph J., Portland, Oreg. Slide rule cursor. Re. 23,127, June 21.

Weller, Joseph F., Lewiston, N. Y., assignor to Mathieson Chemical Corporation. Production of vinyl chloride. Re. 23,128, June 21.

LIST OF DESIGN PATENTEES

Adams, Emile L., assignor of one-half to E. E. Adams, Piedmont, Calif. Doll. 154,194, June 21.

Adams, Ernest E., assignee: *See*—
Adams, Emile L.

Bausch & Lomb Optical Company, assignee: *See*—
Stegeman, Raymond F. E.

Beck, Arthur, Chicago, Ill. Combination griddle and skillet. 154,195, June 21.

Clark, Jesse H., and H. Richards, assignors to Cory Corporation, Chicago, Ill. Decanter. 154,196, June 21.

Clark, John T.: *See*—
Johnson, Carroll W., and Clark.

Cory Corporation, assignee: *See*—
Clark, Jesse H., and Richards.

Ditto, Incorporated, assignee: *See*—
Quirk, Robert W.

Dumke, Maxine S., near Fontana, Calif. Cake chest or similar article. 154,197, June 21.

Emerson, Frank P., Los Angeles, Calif. Popcorn vending machine. 154,198, June 21.

Fairies Manufacturing Company, assignee: *See*—
Sigler, Howard R., and Laystrom.

Finkelstein, Augusta P., Woonsocket, R. I. Clothes and shoe cabinet or the like. 154,199, June 21.

Fulkerson, Doran J.: *See*—
Kovacs, Stella, and Fulkerson.

Gold, Pauline, Hillside, N. J. Clothespin bag or similar article. 154,200, June 21.

Goldfarb, Samuel J., New York, N. Y. Dress. 154,201, June 21.

Hutton, Junius O., Chevy Chase, Md. Liquid beater. 154,202, June 21.

Imperial Brass Manufacturing Company, The, assignee: *See*—
Todd, Edward F.

Johnson, Carroll W., Chicago, and J. T. Clark, Cicero, Ill. Combined operator's stool and control for dental chairs. 154,203, June 21.

Jung, Albert H., Flushing, assignor to Victor Metal Products Corporation, Brooklyn, N. Y. Container cap. 154,204, June 21.

Kovacs, Stella, and D. J. Fulkerson, Dearborn, assignors to Paragon Products Company, Detroit, Mich. Ring comb. 154,205, June 21.

Kraus, Frank H., New York, N. Y. Clothes hanger. 154,206, June 21.

Kraus, Frank H., New York, N. Y. Garment hanger. 154,207, June 21.

Laystrom, Carl A.: *See*—
Sigler, Howard R., and Laystrom.

Lily-Tulip Cup Corporation, assignee: *See*—
Reifsnyder, James D.

MacGregor, Libby, New York, N. Y. Textile fabric. 154,208, June 21.

Meirlok, Walter H., Belleville, Ill. Shower fixture. 154,209, June 21.

Miller, Cecil: *See*—
Snyder, Paul L., and Miller.

Okun, Nathaniel N., Far Rockaway, N. Y. Combined extension key chain and watch. 154,210, June 21.

Paragon Products Company, assignee: *See*—
Kovacs, Stella, and Fulkerson.

Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 154,211, June 21.

Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 154,212, June 21.

Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 154,213, June 21.

Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 154,214, June 21.

Prall, Robert C.: *See*—
Steeds, Thomas A., and Prall.

Quirk, Robert W., assignor to Ditto, Incorporated, Chicago, Ill. Duplicating machine. 154,215, June 21.

Reifsnyder, James D., Flushing, assignor to Lily-Tulip Cup Corporation, New York, N. Y. Paper dish. 154,216, June 21.

Richards, Harper: *See*—
Clark, Jesse H., and Richards.

Roberts, Helen A., Buffalo, N. Y. Dinner cup. 154,217, June 21.

Sigler, Howard R., Argenta, and C. A. Laystrom, Decatur, assignors, by mesne assignments, to Fairies Manufacturing Company, Chicago, Ill. Combined toothbrush and toothpaste holder or similar article. 154,218, June 21.

Snyder, Paul L., and C. Miller, Pomona, Calif. Bagging machine. 154,219, June 21.

Steeds, Thomas A., Cleveland Heights, and R. C. Prall, University Heights, Ohio; said Prall assignor to said Steeds. Coaster. 154,220, June 21.

Stegeman, Raymond F. E., Greece, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Spectacle temple. 154,221, June 21.

Tanner, Edward E., Jr., Chicago, Ill. Feet equipped outer garment. 154,222, June 21.

Todd, Edward F., Highland Park, assignor to The Imperial Brass Manufacturing Company, Chicago, Ill. Merchandise display rack. 154,223, June 21.

Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.

Tweet, Oreo C., Astoria, Oreg. Combined ash tray and saucer. 154,224, June 21.

Varney, Herbert H., Red Wing, Minn. Mixing bowl. 154,225, June 21.

Victor Metal Products Corporation, assignee: *See*—
Jung, Albert H.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 21ST DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

AA Wire Products Co., assignee: *See*—
Muntwyler, Charles L., and Frank.
Abbott, William G., Jr., Milford, N. H. Production of slivers of artificial fibers. 2,473,409, June 21.
Adams, Clyde S., Yellow Springs, assignor to The National Cash Register Company, Dayton, Ohio. Secondary amines of 3,3 bis(p-aminophenyl) phthalide. 2,474,084, June 21.
Adler, Solomon, Kew Gardens, N. Y. Sewing-machine feed. 2,473,934, June 21.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Itehberg, Chessie E., and Fisher.
Air-Maze Corporation, assignee: *See*—
Walton, George M.
Air Reduction Company, Incorporated, assignee: *See*—
Anderson, James L.
Albright, Glenn, Detroit, Mich. Tractor drive mechanism. 2,474,085, June 21.
Aldrich, Donald F., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,473,838, June 21.
All American Airways, Inc., assignee: *See*—
Schultz, Arthur B.
All-Die, Inc., assignee; *See*—
Wunder, Frans.
Allen, Calvin H. and M. E., Oakland, Calif., assignors to Colorphone, Inc. Decorative cover for telephone desk sets. 2,473,775, June 21.
Allen, Mary E.: *See*—
Allen, Calvin H. and M. E.
Allied Chemical & Dye Corporation, assignee: *See*—
Anderson, Carl I.
Brandon, George E.
Fleysher, Maurice H.
Gwynn, Marion H.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Montgomery, Terryl B., and Bloodworth.
Allison, William D., assignor to Motor Research Corporation, Detroit, Mich. Winding device or winch. 2,473,628, June 21.
Alquist, Francis N., and C. W. Hopkins, assignors to The Dow Chemical Company, Midland, Mich. Acid cleaning composition. 2,474,179, June 21.
Altfather, Conrad T., Basking Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Constant-speed electric motor. 2,473,830, June 21.
Amberg, Walter E., Beverly Shores, Ind., assignor to Lily-Tulip Cup Corporation. Conical paper cup with rounded bottom. 2,473,840, June 21.
Ambler, Thomas M.: *See*—
Hill, James E., and Ambler.
American Box Board Company, assignee: *See*—
Richey, Ralph C.
American Can Company, assignee: *See*—
Chatterton, Robert T.
American Chemical Paint Company, assignee: *See*—
Snyder, Eugene.
American Cladmetals Company, assignee: *See*—
Kinney, Joseph, Jr.
American Cyanamid Company, assignee: *See*—
Dudley, James R.
Hultquist, Martin E.
Kaiser, Donald W.
Kienle, Roy H., and Whitcomb.
King, Victor L.
Kropa, Edward L.
Kuh, Erwin, and Barnaby.
Kuh, Erwin, and Smith.
Lecher, Hans Z., Scalera, Joyce, and Forster.
Mowat, John H., and Boothe.
Phelps, Allen S.
Thruston, Jack T.
Waller, Coy W.
American Enka Corporation, assignee: *See*—
Kayser, Guillaume M. A.
American Felt Company, assignee: *See*—
Raymond, James J., and Lehmberg.
American Optical Company, assignee: *See*—
Crandon, Harry D.
Moulton, Harold R.
Riley, Charles P.
American Pipe and Construction Co., assignee: *See*—
Butler, Adolf G.
American Steel and Wire Company of New Jersey, The, assignee: *See*—
Morrison, James J., and Duna.
Anaconda Wire and Cable Company, assignee: *See*—
Brown, Richard J.
Anchor Manufacturing Company, assignee: *See*—
Johansson, Ernest G.

Anderson, Axel G., Minneapolis, Minn. Hand oiler. 2,473,690, June 21.
Anderson, Carl I., Buffalo, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Disazo dyestuffs. 2,474,024, June 21.
Anderson, James L., Closter, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Apparatus for cutting tubes. 2,473,559, June 21.
Anderson, Mauritz L., Arlington, assignor to Raytheon Manufacturing Company, Newton, Mass. Flexibility tester. 2,473,841, June 21.
Anderson, Victor, assignee: *See*—
Berry, Gene L.
Andrews, Bernard R., Braintree, Mass. Drying apparatus. 2,473,629, June 21.
Annesley, Griffith, New York, N. Y. Propeller. 2,473,097, June 21.
Arenco Aktiebolag, assignee: *See*—
Von Segebaden, Ernst.
Ashton, William A., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Independent leverage chuck. 2,473,935, June 21.
Askey, John S., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Dynamo-electric machine field coil. 2,473,842, June 21.
Aspinall, Glenn, Burlington, Wis. Bag holder. 2,474,025, June 21.
Associated Laboratories, Inc., assignee: *See*—
Zimmerman, Merritt A.
Atwood, John B., and B. Trevor, Riverhead, N. Y., assignors to Radio Corporation of America. Mounting for electron discharge device of the high-frequency type. 2,474,026, June 21.
Austin, Dwight E., and W. B. Fageol, assignors to Twin Coach Company, Kent, Ohio. Vehicle spring suspension. 2,473,500, June 21.
Automatic Electric Laboratories, Inc., assignee: *See*—
Jones, Roy W.
Wood, Fredric E.
Austin, John M., Warwick, R. I., assignor to Davol Rubber Company. Inflation indicator for catheters. 2,473,742, June 21.
Avco Manufacturing Corporation, assignee: *See*—
Reid, John D., and Holst.
Aves, Fred J., Beverly Hills, Calif. Rearview mirror adjustable by rotation about a median axis. 2,473,698, June 21.
Baak, Albert E.: *See*—
Sparrow, Hubert T., and Baak.
Baak, Albert E., Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Pressure control apparatus. 2,473,776, June 21.
Babcock & Wilcox Company, The, assignee: *See*—
Ebersole, George B.
Bagley, Edward S., New Orleans, La. Unit water heater. 2,473,560, June 21.
Bahnson, Agnew H., Jr., Winston-Salem, N. C. Air filter. 2,473,501, June 21.
Baker, Benjamin P.: *See*—
Ludwig, Leon R., and Baker.
Baker, Benjamin P., Turtle Creek, and D. C. Harker, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,473,843, June 21.
Baker, Benjamin P., Turtle Creek, B. C. Van Sickle, Wilkinsburg, and J. M. Cumming, Turtle Creek, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,473,844, June 21.
Balmer, James A., assignor to Riley Stoker Corporation, Worcester, Mass. Heat exchanger. 2,473,561, June 21.
Barber-Coleman Company, assignee: *See*—
Greene, Elmer A.
Bard, Francis N., Highland Park, Ill. Joint. 2,473,502, June 21.
Barium Reduction Corporation, assignee: *See*—
Preisman, Louis.
Preisman, Louis, and Hobson.
Barker Brothers, Inc., assignee: *See*—
Doyle, Edwin F.
Barnaby, Hugh S.: *See*—
Kuh, Erwin, and Barnaby.
Barnes, Elias B., Elkhart, Ind. Heater unit and system. 2,473,562, June 21.
Barnes Motor Developments Company, assignee: *See*—
Barnes, William B.
Barnes, William B., Muncie, Ind., assignor to Barnes Motor Developments Company. Antifriction screw and nut. 2,473,748, June 21.

Barreto, Antonio, Rio de Janeiro, Brazil, assignor to Monsanto Chemical Company, St. Louis, Mo. Polychlorophenols in fermentation of carbohydrates. 2,473,630, June 21.
Barry, Arthur J., and J. W. Gilkey, Midland, and L. De Pree, Holland, assignors to The Dow Chemical Company, Midland, Mich. Preparation of silicon halides. 2,474,087, June 21.
Barton, Herman F., Sharon, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control apparatus. 2,473,845, June 21.
Bartlow, Hiram C., Sr., New York, N. Y. Breaker point refacing device. 2,474,086, June 21.
Barton, Loy E., Princeton, N. J., assignor to Radio Corporation of America. Electroacoustic transducer. 2,473,846, June 21.
Battelle Development Corporation, assignee: *See*—
Liger, Andrew W.
Baudry, René A., Pittsburgh, and P. R. Heller, Irwin, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lifting, braking, and jacking system for vertical-shaft rotating machines. 2,473,847, June 21.
Bausch & Lomb Optical Company, assignee: *See*—
Forrest, John W.
Baxter, Harold G., Baldwin, N. Y., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,473,848, June 21.
Beck, Edward F. W., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lightning arrester. 2,473,849, June 21.
Beck, Edward F. W., Pittsburgh, and J. S. Ferguson, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lightning arrester. 2,473,850, June 21.
Becker, Maximilian C., East Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Backstop for electromagnetic devices. 2,473,851, June 21.
Beechlyn, John T., Worcester, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Variable cavity resonator. 2,473,777, June 21.
Beemer, Henry J., Sidney, Ohio. Signaling device for vehicles. 2,473,631, June 21.
Beja, Maurice, and R. A. Loisy, Salindres, assignors to Compagnie de Produits Chimiques et Electrometallurgiques Alais Froges et Camargue, Paris, France. Preparation of manganese dioxide. 2,473,563, June 21.
Bell, Clarence W., Lakewood, Ohio. Machine for straightening and sizing castings, forgings, stampings, or the like. 2,473,673, June 21.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Meacham, Larned A.
Pollard, Charles E., Jr.
Bendix Aviation Corporation, assignee: *See*—
Fontaine, Athanas P.
Hosford, Norman F.
Miller, Raymond J.
Schneck, Frederick W.
Teegne, Walter D., Jr.
Benes, Edwin J., Newburgh Heights, Ohio. Fishing rod holder. 2,473,778, June 21.
Benioff, Hugo, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Pickup loop with thermocouple. 2,473,779, June 21.
Benioff, Hugo, Pasadena, Calif., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Spark transmitter. 2,473,780, June 21.
Bennett, Clarence H., assignor to Selas Corporation of America, Philadelphia, Pa. Airplane heater having two-speed control. 2,473,699, June 21.
Berger, Carl W., McPherson, Kans., assignor to The Inventors Guild, Newark, N. J. Recovery of phenol salts from aqueous solutions. 2,474,028, June 21.
Berger, Emil J., and H. K. West, assignors to Dexdale Hosiery Mills, Lansdale, Pa. Pattern mechanism for knitting machines. 2,473,503, June 21.
Berger, Morris, Burlington, N. J. Electromechanical safety razor. 2,474,027, June 21.
Bergren, Julius, Minneapolis, Minn., assignor to J. A. Bousquet. Weedless fishhook. 2,473,564, June 21.
Berkley, Carl, New York, N. Y., assignor to Allen B. DuMont Laboratories, Inc., Passaic, N. J. Apparatus for testing the accuracy of movements. 2,473,700, June 21.
Berry, Gene L., assignor of one-fourth to V. Anderson, Hailey, Idaho. Diaper cleaning device. 2,473,852, June 21.
Besson, Henri, assignee: *See*—
Rechti, Charles.
Bickerton, Jack M., assignor to Innis, Speiden and Company, New York, N. Y. Fumigant composition and method. 2,473,984, June 21.
Bird Electronic Corporation, assignee: *See*—
Bird, James R.
Bird, James R., Chagrin Falls, assignor to Bird Electronic Corporation, Cleveland, Ohio. Switch. 2,473,565, June 21.
Birtman Electric Company, assignee: *See*—
Lanter, Clarence W.
Block, Seymour S., Louisville, assignor to Joseph E. Seagram & Sons, Inc., Shively, Ky. Microbial fermentation of acid hydrolysed carbohydrate mashes. 2,474,130, June 21.
Bloodworth, Thomas H.: *See*—
Montgomery, Terryl B., and Bloodworth.
Boddie, Clarence A., Belmar, N. J. Concentric line oscillator. 2,473,504, June 21.
Bode, Robert G., assignor to The Norwood Company, Chicago, Ill. Extensible strut. 2,473,632, June 21.
Boehm, Frederick, assignor to Schutte and Koerting Company, Philadelphia, Pa. Nozzle. 2,473,674, June 21.
Boeing Airplane Company, assignee: *See*—
Stoner, George H.
Bohn, Donald I., Pittsburgh, assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa. Tripping device. 2,474,029, June 21.
Bommer, Max: *See*—
Hauser, Hermann, and Bommer.
Boone, Clarence W., Syracuse, N. Y. Traction device. 2,473,782, June 21.
Booth, George M., Westfield, assignor to Wallace & Tiernan Co., Inc., Belleville, N. J. Water purification unit. 2,473,986, June 21.
Boothe, James H.: *See*—
Mowat, John H., and Boothe.
Boreszewski, Clarence F., Camden, N. J. Rotating disk racing game. 2,473,675, June 21.
Bortnick, Newman M., assignor to Rohm & Haas Company, Philadelphia, Pa. Unsaturated heterocyclic alcohol. 2,473,497, June 21.
Bousquet, Joseph A., assignee: *See*—
Bergren, Julius.
Boykin, John R., Baltimore, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Frequency control system. 2,473,853, June 21.
Boypower, Inc., assignee: *See*—
Fosbender, Elmer K.
Bradley, Schuyler L., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,473,854, June 21.
Brandon, George E., East Orange, N. J., assignor to Allied Chemical & Dye Corporation. Coking high volatile coal involving incorporation therein of a limited amount of blast furnace fine dust. 2,473,987, June 21.
Brassell, Bryan, Santa Rosa, N. Mex. Self-reversing power jack. 2,473,566, June 21.
Braswell, Charles W., Long Beach, Calif. Nonslip golf glove. 2,474,030, June 21.
Braun, Frank C., New York, N. Y. Floral support. 2,473,855, June 21.
Brewer-Titchener Corporation, assignee: *See*—
Johannsen, Udo K.
Brinkoeter, Julius A., assignor to Ed Friedrich, Inc., San Antonio, Tex. Eliminate drippage of condensation in openview frozen food cases. 2,473,781, June 21.
Brock, Louis R., Hague, N. Y. Attachable lifting arm for bulldozer blades. 2,473,505, June 21.
Brockway Company, The, assignee: *See*—
Guarnaschelli, Stephen.
Brooks, Lester A., Stamford, Vt., assignor to Sprague Specialties Company, North Adams, Mass. Electrical conductor. 2,473,085, June 21.
Brooks, Richard E.: *See*—
Gresham, William F., Brooks, and Grigsby.
Brown, Ernest N.: *See*—
Wickizer, Gilbert S., and Brown.
Brown Flatube Company, assignee: *See*—
Brown, John W., Jr.
Welsh, Oral.
Brown, John W., Jr., Lakewood, assignor to Brown Flatube Company, Elyria, Ohio. Welding fins to tubular members by electric resistance welding. 2,473,633, June 21.
Brown, John W., Jr., Lakewood, assignor to Brown Flatube Company, Elyria, Ohio. Electric resistance welding method. 2,473,634, June 21.
Brown, John W., Jr., Lakewood, assignor to Brown Flatube Company, Elyria, Ohio. Portable heater. 2,473,783, June 21.
Brown, Richard J., Hastings on Hudson, N. Y., assignor to Anaconda Wire and Cable Company. Striping of vinyl resin coated wires with ketone dye solutions. 2,474,088, June 21.
Brown, Roland E.: *See*—
Lyon, Norman W., and Brown.
Brown, William C., Lincoln, assignor to Raytheon Manufacturing Company, Newton, Mass. Electronic discharge device. 2,473,567, June 21.
Browning, J. M. & M. S., Company, assignee: *See*—
Browning, Val A.
Browning, Val A., assignor to J. M. & M. S. Browning Company, Ogden, Utah. Firing mechanism. 2,474,180, June 21.
Bruen, George C., deceased, by S. E. Bruen, executrix, Chicago, assignor, by mesne assignments, of seventy and five-tenths per cent to said S. E. Bruen, five per cent to E. V. Dickinson, Highland Park, nine per cent to S. M. Bullock, Wilmette, Ill., ten and five-tenths per cent to G. A. Stuart, Denver, Colo., two per cent to J. Fisher, Chicago, one per cent to M. Thoencn, Elmwood Park, one per cent to G. H. Frederickson, Chicago, Ill., and one per cent to E. M. Thorsen, St. Joseph, Mo. Card filing equipment. 2,473,856, June 21.

Bruen, Sophie E., executrix, assignee: *See*—
Bruen, George C.
Bryant Electric Company, The, assignee: *See*—
Webster, Benjamin C.
Bullard Company, The, assignee: *See*—
Bullard, Edward P., III.
Bullard, Edward P., III, Fairfield, Conn., assignor to The Bullard Company. Positioning device. 2,473,506, June 21.
Bullard, Edward P., III, Fairfield, Conn., assignor to The Bullard Company. Positioning apparatus. 2,473,507, June 21.
Bullock, Giles E., Rochester, N. Y. Lubricant filtering system. 2,473,701, June 21.
Bullock, Sarah M., assignee: *See*—
Bruen, George C.
Bulman, Elvah O., Grand Rapids, Mich. Paper roll holder. 2,473,744, June 21.
Burchell, Fford, assignor to Burchell-Holloway Corporation, New York, N. Y. Apparatus for insertion in color display devices utilizing polarized light for securing changing saturation of specific hues in fixed zones as viewed by observers. 2,473,857, June 21.
Burchell-Holloway Corporation, assignee: *See*—
Burchell, Fford.
Burns, Frank D., Muskegon, Mich. Boat cover. 2,474,031, June 21.
Burrough, Joe, San Francisco, Calif. Internal-combustion engine. 2,473,936, June 21.
Burroughs Wellcome & Co. (U. S. A.) Inc., assignee: *See*—
Slomon, William.
Bntacet Limited, assignee: *See*—
Sulzbacher, Max.
Butler, Adolf G., Hawthorne, assignor to American Pipe & Construction Company, Los Angeles, Calif. Method and apparatus for welding structural cages. 2,473,858, June 21.
Butler, Adolf G., Hawthorne, assignor to American Pipe and Construction Co., Los Angeles, Calif. Method and apparatus for welding structural cages. 2,473,859, June 21.
Buttery, Kenneth T., assignor to Sutherland Paper Company, Kalamazoo, Mich. Display carton with support. 2,473,637, June 21.
Byrns, Alva C., Los Altos, assignor to The Permanente Metals Corporation, Oakland, Calif. Removing a fluorine compound from a liquid hydrocarbon. 2,474,032, June 21.
Caldwell, Kyle C., Knoxville, Tenn. Tray type liquid fuel burner. 2,473,568, June 21.
California Research Corporation, assignee: *See*—
Darragh, John L.
Denison, George H., Jr., and Condit.
Levine, Irving E.
Levine, Irving E., and Claussen.
Calloway Mills Company, assignee: *See*—
Parker, Samuel P.
Cameron, Edward H., Seattle, Wash. Safety automobile door lock handle. 2,473,937, June 21.
Camerota, Louis A., Burlington, assignor to Florence Pipe Foundry & Machine Company, Florence, N. J. Control system for hydraulic machinery. 2,473,676, June 21.
Campos, Adolph, Newark, N. J. Pyrophoric element feeding mechanism for lighters. 2,473,636, June 21.
Canisteo Industries, Inc., assignee: *See*—
Condon, Fred L.
Cannizzaro, Anthony H. and P. F., New York, N. Y. Combined photograph album and music box. 2,473,938, June 21.
Cannizzaro, Pauline F.: *See*—
Cannizzaro, Anthony H. and P. F.
Capewell Manufacturing Company, assignee: *See*—
Warner, Alden Y., and Craven.
Carlin, Arvid F., Mamaroneck, N. Y. Sharpening device. 2,473,702, June 21.
Carlin, James C., and R. R. Lloyd, Norristown, assignors to Lee Rubber & Tire Corporation, Conshohocken, Pa. Inner tube and making the same. 2,473,784, June 21.
Carman & Co., Inc., assignee: *See*—
Marrocco, Guy D.
Carnegie-Illinois Steel Corporation, assignee: *See*—
Ashton, William A.
Rendel, George H.
Carrier Corporation, assignee: *See*—
Silvera, Americo.
Trumbler, William E.
Carroll, Elbert H., deceased, West Boylston; H. W. Cowee and E. C. Carroll, executors, assignors to Carroll Pressed Metal Company, Worcester, Mass. Toe plate for ski bindings. 2,473,637, June 21.
Carroll, Elisabeth C., executrix: *See*—
Carroll, Elbert H.
Carroll Pressed Metal Company, assignee: *See*—
Carroll, Elbert H.
Carson, Boyce G., Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of ammonia salts of maleic acid. 2,474,089, June 21.
Carter, George I., Longmeadow, assignor to Harvey-Whipple, Incorporated, Springfield, Mass. Multiple tube forced-draft and air flow air heater. 2,474,090, June 21.
Cartun, Paul O., Cleveland Heights, Ohio, assignor to General Electric Company. Internal exhaust seal for electric lamps and similar devices. 2,473,860, June 21.
Cast, Don T., Columbus, Ohio. Portable heat-adjusting charcoal stove. 2,473,569, June 21.
Cate, Edward C., assignee: *See*—
Cate, William A.
Cate, William A., assignor of forty-nine per cent to E. C. Cate, Portland, Oreg. Rotary combustion motor. 2,473,785, June 21.
Celanese Corporation of America, assignee: *See*—
Shuman, Royal L.
Sowter, Percy F. C.
Chain Belt Company, assignee: *See*—
Olson, Albert M.
Chamberlin, Reginald H. D., and C. H. L. Wynne, London, and J. S. Northolt, assignors to D. Napier & Son Limited, London, England. Apparatus for metering the fuel supplied to prime movers. 2,474,033, June 21.
Chapman, Clarence E.: *See*—
Wixon, Paul E., and Chapman.
Chatterton, Robert T., Chappaqua, assignor to American Can Company, New York, N. Y. Method and apparatus for feeding sheets. 2,474,141, June 21.
Cherry-Burrell Corporation, assignee: *See*—
Kendall, Ira H.
Cherry Rivet Company, assignee: *See*—
Shaff, Ernest H.
Chicago Bridge & Iron Company, assignee: *See*—
Dewey, Raymond S.
Lebedeff, Michael N.
Chillson, Charles W., Caldwell, N. J., assignor to Curtiss-Wright Corporation. Propeller governor. 2,474,140, June 21.
Chirelstein, Nathan, Maplewood, N. J. Manufacturing attachment plugs. 2,473,570, June 21.
Chubb, Melvin F., Joplin, Mo., assignor to The Eagle-Picher Company. Machine for processing storage battery plates. 2,474,091, June 21.
Chubbuck, Leonard B., Hamilton, Ontario, Canada, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Metal-clad switchgear. 2,473,861, June 21.
Cincinnati Grinders Incorporated, assignee: *See*—
Kearing, Bernard A., and Decker.
Cincinnati Milling Machine Co., assignee: *See*—
Wilder, Warren, and Horlacher.
Clark, Winslow B. M., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Polarized electromagnet. 2,473,939, June 21.
Clark, Winslow B. M., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Fire alarm system. 2,473,940, June 21.
Claussen, William H.: *See*—
Levine, Irving E., and Claussen.
Clawsey, John D., New York, N. Y. Combination sink and dining table. 2,473,862, June 21.
Clayhourn, Glen L., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Transfer system. 2,473,863, June 21.
Cleveland Crane & Engineering Company, The, assignee: *See*—
Dehn, Roy F.
Coberly, Clarence J., Los Angeles, assignor to Kobe, Inc., Huntington Park, Calif. Heavy oil and sand pump. 2,473,864, June 21.
Coleman, Clarence B.: *See*—
Ridgely, Neville R., Jr., and Coleman.
Coleman, William H., Washington, D. C. Device for teaching music. 2,473,088, June 21.
Colilidge, Albert E., E. C. Dawes, and T. A. Gilbert, assignors to The Klinger Manufacturing Company Limited, London, England. Plasticizing knitted goods made from thermoplastic yarn. 2,474,093, June 21.
Collins, Douglas, Salisbury, N. C. Freezer shelf construction. 2,473,508, June 21.
Collins, Edgar V., Ames, Iowa. Rotary earth scraper. 2,473,786, June 21.
Colorphone, Inc., assignee: *See*—
Allen, Calvin H. and Mary E.
Colquitt, Odie, assignor to Patents, Inc., Denver, Colo. Combination water tank and truck body. 2,474,094, June 21.
Colstad, Charles N., Cranston, R. I., assignor, by mesne assignments, to W. A. Sheaffer Pen Company, Fort Madison, Iowa. Clip for writing instruments. 2,473,689, June 21.
Coltman, Alfred D., Vancouver, British Columbia, Canada, assignor to Graflex, Inc., Rochester, N. Y. Instrument mounting. 2,474,196, June 21.
Colton, Henry S., Shaker Heights, and R. W. Frischmuth, University Heights, Ohio, and R. L. Knowles, Bronxville, N. Y. Producing potassium tungstate. 2,473,703, June 21.
Combined Optical Industries Limited, assignee: *See*—
Cohnson, John.
Compagnie de Produits Chimiques et Electrometallurgiques Alais Froges et Camargue, assignee: *See*—
Beja, Maurice, and Loisy.
Compton, Henry P., Abilene, assignor of one-half to H. E. Montgomery, Dallas, Tex. Coin controlled package vending machine. 2,474,142, June 21.
Condit, Paul C.: *See*—
Denison, George H., Jr., and Condit.
Condon, Fred L., assignor to Canisteo Industries, Inc., Canisteo, N. Y. Railway crossing. 2,473,941, June 21.
Conn, Raymond A., Springfield, Nova Scotia, Canada. Jaw adjusting device for pipe wrenches. 2,473,787, June 21.

Cook, Milford M., Visalia, Calif. Fluid pressure actuated tire mounting or demounting device. 2,473,571, June 21.
Cooper, Nelson D., Mariemont, and E. A. Ruchty, Norwood, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Magnetic servo operator. 2,473,572, June 21.
Coppus Engineering Corporation, assignee: *See*—
Gibson, Carl W.
Cornthwaite, William R., and N. W. Flodin, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of polyvinyl ketals. 2,474,095, June 21.
Cowdrey, Cecil L.: *See*—
Simmons, Herbert, and Cowdrey.
Cowee, Howard W., executor: *See*—
Carroll, Elbert H.
Crabtree, Norris: *See*—
Smith, Ellis, Crabtree, Naylor, and Maw.
Craddock, Reginald V.: *See*—
Fragola, Caesar F., and Craddock.
Craig, Kenneth A., Appleton, Wis., assignor to Paper Patents Company. Bleaching poplar groundwood. 2,474,034, June 21.
Crain, Rollie, Marion, Ill. Grain threshing and separating machine. 2,473,788, June 21.
Crandon, Harry D., Woodstock, Conn., assignor to American Can Optical Company, Southbridge, Mass. Method and apparatus for making containers. 2,474,035, June 21.
Crane Co., assignee: *See*—
Marks, Milton M.
Crane Packing Company, assignee: *See*—
Schmitz, Carl E.
Craven, Wilbur J.: *See*—
Warner, Alden Y., and Craven.
Crawford, Cecil: *See*—
Crawford, Herman E. and C.
Crawford, Herman E., Kernersville, and C. Crawford, Durham, N. C. Knitting machine. 2,473,677, June 21.
Crise Electric Manufacturing Company, assignee: *See*—
Crise, George W.
Crise, George W., assignor to Crise Electric Manufacturing Company, Columbus, Ohio. Thermostatically operated switch. 2,473,789, June 21.
Crosby, Murray G., Upper Montclair, N. J., assignor to Radio Corporation of America. Automatic frequency control circuits. 2,473,790, June 21.
Crown Cork & Seal Company, Inc., assignee: *See*—
Henschen, Edgar, and Dennis.
Cumming, James M.: *See*—
Baker, Benjamin P., Van Sickle, and Cumming.
Cumming, Reginald L., assignor of twenty-five per cent to E. M. Streicher, E. G. Streicher, twenty-five per cent to E. M. Streicher, and twenty-five per cent to G. A. Weiss, Ypsilanti, Mich. Hydraulic transmission and clutch. 2,473,638, June 21.
Cuno Engineering Corporation, The, assignee: *See*—
Kroll, Alfred J., and Schnick.
Curd, Francis H. S., and F. L. Rose, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, Biguanide derivatives. 2,473,989, June 21.
Curley, John J., Brockton, Mass. Paperweight. 2,474,036, June 21.
Curtis, George E., Jr., Penn Wynne, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Refrigerator liner support. 2,473,573, June 21.
Curtiss-Wright Corporation, assignee: *See*—
Chillson, Charles W.
Murphy, Howard.
Rutledge, John E.
Cuthrell, Antum E., Pleasanton, Tex. Portable brush and tree cutting machine of the hammer-driven cutter blade type. 2,474,037, June 21.
Dalziel, William: *See*—
Wilson, Arthur D., and Dalziel.
Dane, Bruce W., Newark, N. J. Instrument mallet. 2,473,865, June 21.
Darragh, John L., Berkeley, assignor to California Research Corporation, San Francisco, Calif. Manufacture of halogenated aromatic compounds. 2,473,990, June 21.
Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Soubbing means. 2,473,678, June 21.
Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Locking means for rotary operating bars of door fasteners. 2,473,679, June 21.
Davies, Weyburn J., Pond Creek, Okla. Wrecking tool. 2,473,866, June 21.
Davignon, Ermand H., assignor to Metals & Controls Corporation, Attleboro, Mass. Composite metal. 2,474,038, June 21.
Davignon, Ermand H., assignor to Metals & Controls Corporation, Attleboro, Mass. Forming composite metal having a nickelplated beryllium-copper base and gold or silver bonded thereto by a copper-plated iron sheet. 2,474,039, June 21.
Davis, Joseph, assignor to Joseph Davis Plastics Co., Arlington, N. J. Rolling toy. 2,473,574, June 21.
Davis, Joseph, Plastics Co., assignee: *See*—
Davis, Joseph.
Davol Rubber Company, assignee: *See*—
Ausin, John M.
Dawes, Edwin C.: *See*—
Collidge, Albert E., Dawes, and Gilbert.
Dawson, John W., Auburndale, assignor to Raytheon Manufacturing Company, Newton, Mass. Resistance welding system. 2,473,575, June 21.
Dawson, John W., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Welding system. 2,473,576, June 21.
Day, James R., Peconic, N. Y., assignor to Radio Corporation of America. Pulse integrating circuits. 2,474,040, June 21.
Decker, Jacob: *See*—
Kearns, Bernard A., and Decker.
Deeter, Everett L., Washington, D. C. Voltage control system. 2,473,512, June 21.
De Groote, Melvin, University City, and B. Keiser, Webster Groves, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del. Carbonic acid amides of certain substituted glyoxalidines. 2,473,577, June 21.
Dehmel, Richard C., Summit, N. J. Optical training apparatus. 2,474,096, June 21.
Dehmel, Richard C., Summit, N. J. Chart holder. 2,474,097, June 21.
Dehn, Roy F., Cleveland, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio. Shear press. 2,473,942, June 21.
De Long, Herbert K., assignor to The Dow Chemical Company, Midland, Mich. Anodic coating of magnesium. 2,474,181, June 21.
Demeulenaere, Marcel, Flushing, N. Y. Cash register. 2,473,509, June 21.
Denison Engineering Company, The, assignee: *See*—
Renick, Wendell E.
Denison, George H., Jr., Oakland, and P. C. Condit, Berkeley, assignors, by mesne assignments, to California Research Corporation, San Francisco, Calif. Stabilization of organic substances. 2,473,510, June 21.
Denison, George H., Jr., Oakland, and P. C. Condit, Berkeley, assignors to California Research Corporation, San Francisco, Calif. Mineral oil compositions and the like. 2,473,511, June 21.
Dennison, Stanley W.: *See*—
Henschen, Edgar, and Dennis.
De Pree, Lee: *See*—
Barry, Arthur J., Gilkey, and De Pree.
Derby, John H., Scarsdale, N. Y. Remote control valve. 2,473,867, June 21.
Dewey, Raymond S., Chicago, Ill., assignor to Chicago Bridge & Iron Company. Sealing and positioning means for grinder mechanisms or the like. 2,473,513, June 21.
Dexdale Hosiery Mills, assignee: *See*—
Berger, Emil J., and West.
Diamond Alkali Company, assignee: *See*—
Robainson, Edward A.
Diamond Match Company, The, assignee: *See*—
Montague, Stephen F.
Dickinson, Edna V., assignee: *See*—
Bruen, George C.
Dimmick, Glenn L., Indianapolis, Ind., assignor to Radio Corporation of America. Photometric measurement of light values using automatic gain control in photomultiplier tubes. 2,474,098, June 21.
Dimmick, Glenn L., Haddonfield, N. J., assignor to Radio Corporation of America. Electromagnetic sound-powered telephone. 2,474,197, June 21.
Dimmock, Charles A., Jr., Springfield, Mass. Apparatus for scribing circles on cylindrical members. 2,474,041, June 21.
Di Renzo, Alfred, Passaic, N. J. Chair. 2,473,745, June 21.
Dispos-A-Tube, Inc., assignee: *See*—
Pohl, Herman L.
Domke, Edward A., assignor of twenty-four per cent to L. E. Riemer, twenty-four per cent to S. L. Piatkowski, Ann Arbor, and twenty-four per cent to H. E. Logan, East Ann Arbor, Mich. Load supporting roller. 2,473,868, June 21.
Doremus, John A., Chicago, Ill., assignor, by mesne assignments, to Raytheon Air Ream, Inc., Newton, Mass. Induction motor servo system. 2,473,791, June 21.
Doughty, Howard W., Amherst, assignor to Firetox Company, Holyoke, Mass. Fire extinguisher. 2,474,099, June 21.
Dow Chemical Company, The, assignee: *See*—
Alquist, Francis N., and Hopkins.
Barry, Arthur J., Gilkey, and De Pree.
De Long, Herbert K.
McIntire, Otis R.
Dowty Equipment Limited, assignee: *See*—
Killner, Frederick E.
Doyle, Edwin F., Amityville, assignor to Barker Brothers, Inc., Brooklyn, N. Y. Goblet buff. 2,473,869, June 21.
Dudley, James R., Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y. Synthetic resins derived from acrylonitrile adducts. 2,473,498, June 21.
Dufour, Maurice F.: *See*—
Hilla, Robert C., and Dufour.
Duman, Louis R., assignee: *See*—
Freeman, Ernest H.
DuMont, Allen B., Laboratories, Inc., assignee: *See*—
Berkley, Carl.
Maron, Meyer.
Dunn, Alfred L.: *See*—
Morrison, James J., and Dunn.

Dunham, Le Roy S., East Orange, and E. V. Steffensen, Belleville, assignors to Thomas A. Edison, Incorporated, West Orange, N. J. Impregnating carbonaceous bodies. 2,473,943, June 21.

Du Pont, E. I. de Nemours & Company, assignee: *See*—
Carson, Boyce G.
Cornthwaite, William R., and Flodin.
Eubank, Lowell D.
Eubank, Lowell D., and Krister.
Gresham, William F.
Gresham, William F., and Hardy.
Hanford, William E., Roland, and Mochel.
Hansley, Virgil L.
Loder, Donald J.
Taylor, Guy B.
Vining, William H.
Walker, Isaac F.

Durakool, Inc., assignee: *See*—
Keating, John P.

Eagle-Picher Company, The, assignee: *See*—
Chubb, Melvin F.
McCutcheon, Frank G.

Earnest, Frank W., Jr., Wilkes-Barre, Pa. Ice disintegrating utensil. 2,474,100, June 21.

Eastman, Nathaniel, New York, N. Y., assignor to New England Plastic Co. Inc., Leominster, Mass. Pry off type jar cap remover. 2,473,870, June 21.

Ebersole, George B., Akron, Ohio, assignor to The Babcock & Wilcox Company, Rockleigh, N. J. Air-swept pulverizer having internal flow area adjusting means. 2,473,514, June 21.

Edelman, Abraham, New York, assignor to The Liquidometer Corporation, Long Island City, N. Y. Totalizer. 2,473,578, June 21.

Edels, Harry, Stafford, assignor to The English Electric Company Limited, London, England. Electric arc welding. 2,473,871, June 21.

Edison, Thomas A., Incorporated, assignee: *See*—
Clark, Winslow B. M.
Dunham, Le Roy S., and Steffensen.

Egger, Leopold, Lins, Upper Austria. Artificial tooth. 2,473,515, June 21.

Egle, Edward J., Jr., Woodside, N. Y., assignor to the United States of America as represented by the United States Atomic Energy Commission. Vibration eliminating apparatus. 2,474,042, June 21.

Elektrokemisk A/S, assignee: *See*—
Hansen, Georg M.

Elliott Bay Mill Co., assignee: *See*—
Miller, William J.

Emery Industries, Inc., assignee: *See*—
Myers, Latimer D., and Fitzpatrick.

English Electric Company Limited, The, assignee: *See*—
Edels, Harry.

Epstein, H., assignee: *See*—
Freeman, Ernest H.

Erbe, John R.: *See*—
Stoltz, Glenn E., and Erbe.

Erickson, John W., Seattle, Wash. Door casing gauge. 2,473,639, June 21.

Etches, James H., Detroit, Mich. Collapsible camp stove. 2,474,043, June 21.

Eubank, Lowell D., Richland, Wash., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Foaming-type galvanizing fluxes and processes employing them. 2,473,570, June 21.

Eubank, Lowell D., Richland, Wash., and C. J. Krister, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Foaming galvanizing fluxes and processes employing them. 2,473,580, June 21.

Fageol, William B.: *See*—
Austin, Dwight E., and Fageol.

Fairey Aviation Company Limited, The, assignee: *See*—
Forsyth, Archibald G.

Farris, Edmond J., Bristol, Pa. Game device. 2,473,680, June 21.

Faulk, Donald P., Waltham, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrical circuits. 2,473,640, June 21.

Feldstein, Henry H., Cleveland, Ohio. Evaporator. 2,473,841, June 21.

Fisher, Benjamin, New York, N. Y. Baby high chair. 2,473,991, June 21.

Filtors, Incorporated, assignee: *See*—
Molyneux, Cecil P.

Firetox Company, assignee: *See*—
Doughty, Howard W.

First Industrial Corporation, assignee: *See*—
Riche, Arthur L.

Fisher, Charles H.: *See*—
Rehberg, Chessie E., and Fisher.

Fisher, Jay, assignee: *See*—
Brnen, George C.

Fitzpatrick, J. D.: *See*—
Myers, Latimer D., and Fitzpatrick.

Fleysher, Maurice H., Buffalo, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Manufacturing anthraquinone-C-arylthiazoles. 2,473,872, June 21.

Flodin, Nestor W.: *See*—
Cornthwaite, William R., and Flodin.

Florence Pipe Foundry & Machine Company, assignee: *See*—
Camerota, Louis A.

Fontaine, Athanas P., assignor to Bendix Aviation Corporation, Detroit, Mich. Automatic flap retractor. 2,473,792, June 21.

Forbender, Elmer K., assignor to Boypower, Inc., Los Angeles, Calif. Wheeled carrier. 2,473,873, June 21.

Ford, George E., Brighton, N. Y. Indicating instrument with magnetic drive. 2,473,581, June 21.

Forrest, John W., Brighton, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Prism system for refractometer of the Abbé type. 2,474,044, June 21.

Forster, Warren S.: *See*—
Lecher, Hans Z., Scalera, Joyce, and Forster.

Forsyth, Archibald G., Cheam, assignor to The Fairey Aviation Company Limited, Hayes, England. Propulsion means for aircraft and the like. 2,474,143, June 21.

Forsyth, Archibald G., Cheam, assignor to The Fairey Aviation Company Limited, Hayes, Middlesex, England, Electrically and power operated pitch changing mechanism. 2,474,144, June 21.

Found, Clifton G., and W. J. Winninghoff, Cleveland Heights, Ohio, assignors to General Electric Company. Low-pressure electric discharge device. 2,473,642, June 21.

Fowler, John, Stockport, England, assignor, by mesne assignments, to General Electric Company. Electric switch. 2,473,992, June 21.

Fragola, Caesar F., Brooklyn, and R. V. Craddock, Willigton Park, N. Y., assignors to The Sperry Corporation. Gyro flux valve compass system. 2,473,516, June 21.

Fram Corporation, assignee: *See*—
Robertson, Edward R.

Frank, Edward J.: *See*—
Muntwyler, Charles L., and Frank.

Fraser, Kenneth G., assignee: *See*—
Stillwagon, George B., Jr.

Fredericksen, George H., assignee: *See*—
Bruen, George C.

Freedman, Doris M., New York, N. Y. Adhesion testing machine. 2,473,517, June 21.

Freeland, Harry D., Waynesburg, Pa. Lifting jack. 2,474,045, June 21.

Freeman, Ernest H., Wilmette, assignor to H. Eptein and L. B. Duman, Chicago, Ill. Transformer. 2,473,746, June 21.

Fregeolle, Oscar, assignor to Hemphill Company, Central Falls, R. I. Selecting mechanism. 2,473,944, June 21.

Friedrich, Ed, Inc., assignee: *See*—
Brinkoetter, Julius A.

Fries, Karl W., assignor to Rhinelander Paper Company, Rhinelander, Wis. Producing lactic acid. 2,474,046, June 21.

Frischmuth, Robert W.: *See*—
Colton, Henry S., Knowles, and Frischmuth.

Froblom, John M., Holland, Mich. Toolmaker's vice or clamp. 2,473,643, June 21.

Frothingham, Harriett C.: *See*—
Frothingham, Harry A. and H. C.

Frothingham, Harry A. and H. C., Stamford, Conn. Kitchen cabinet having top opening with pedal operated closure. 2,474,101, June 21.

Furnas Electric Company, assignee: *See*—
Parmann, Edwin A.

Furzebill Laboratories Limited, assignee: *See*—
Namenyl-Katz, Laszlo.

Gamberg, Edward R.: *See*—
Jennings, Charles H., and Gamber.

Gambill, Marvin, Odessa, Tex. Water softener. 2,474,145, June 21.

Gangle, Charles C.: *See*—
Loeser, George H., and Gangle.

Ganong, Jonett C., Mahopac Falls, N. Y. Bait box. 2,473,874, June 21.

Gardner, Bernard C., Waltham, assignor to Raytheon Manufacturing Company, Newton, Mass. Grid structure. 2,473,793, June 21.

Garrard, Howard F., Osborn, and E. V. Rupp, Dayton, Ohio. Pressure breathing mask for aviation. 2,473,518, June 21.

Garetson, Owen L., Roswell, N. Mex., assignor to Phillips Petroleum Company. Hose connector and valve. 2,473,704, June 21.

Garrett Corporation, Airesearch Manufacturing Company division, The, assignee: *See*—
Ramsaur, Walter R.

General Electric Company, assignee: *See*—
Cartun, Paul O.
Found, Clifton G., and Winninghoff.
Fowler, John.
Greiner, Alfred.
Jordan, Paul B., and Pipkin.
Penon, Rene, and Lemaigre-Voreaux.
Stone, Melvin L.
Wyer, Richard F.

Ratalczak, Francis I.

General Steel Castings Corporation, assignee: *See*—
Pflager, Harry M.
Meyer, William H.

Gentile, Carmine J.: *See*—
Sacher, Murray H., and Gentile.

George, Ralph W., Riverhead, N. Y., assignor to Radio Corporation of America. Electrical contactor for movable shafts. 2,473,705, June 21.

Gershon, Benjamin, Chicago, Ill. Stove mat. 2,474,102, June 21.

Geuder, Paeschke & Frey C., assignee: *See*—
Lampiris, William.

Gibson, Carl W., assignor to Coppus Engineering Corporation, Worcester, Mass. Rotary fuel burner with removable fuel-conducting means. 2,473,945, June 21.

Gleseker, Leonard F., Preble, Ind. Preserving and maintaining color of green vegetables. 2,473,747, June 21.

Gilbert, Thomas A.: *See*—
Collidge, Albert E., Dawes, and Gilbert.

Gilkey, John W.: *See*—
Barry, Arthur J., Gilkey, and De Pree.

Gillette Safety Razor Company, assignee: *See*—
Mnros, Joseph.

Glittzer, Edward H., San Diego, Calif. Poise mounting for racing cars. 2,473,519, June 21.

Gleason, William W., assignor to Nachman Corporation, Chicago, Ill. Spring assembly for upholstery. 2,473,700, June 21.

Goldman, Paul R., Andover, assignor to Plymold Corporation, Lawrence, Mass. Tubes, pipes, and the like. 2,473,875, June 21.

Goldstaub, Helne H., Snaresbrook, England. Slide rule. 2,473,876, June 21.

Goldstein, Joseph, Brookline, Mass. Luminescent shoe. 2,473,877, June 21.

Goodrich, B. F., Company, The, assignee: *See*—
Hollerith, Charles.
Krots, Alvin S.
Smith, Grant W.

Goodwin, Vernon D., Floral Park, N. Y., assignor to Sylvania Electric Products Inc., Emporium, Pa. Carton for radio tubes and the like. 2,473,582, June 21.

Gorakowski, Andrew, Avoca, Pa. Expansible plug for sealing bores. 2,474,047, June 21.

Graflex, Inc., assignee: *See*—
Coltman, Alfred D.

Graham, George K., Oceanside, N. Y., assignor to Radio Corporation of America. System for volume compressions. 2,474,103, June 21.

Grand Rapids Hardware Company, assignee: *See*—
Viehweger, August.

Gray Manufacturing Company, The, assignee: *See*—
White, George H.

Gray, Samuel D., assignee: *See*—
Long, James I.

Great Atlantic & Pacific Tea Company, assignee: *See*—
Tully, John P.

Green, Edwin F., Ashland, Ky. Portable mold for concrete blocks. 2,473,748, June 21.

Greenlee, Elmer A., assignor to Barber-Colman Company, Rockford, Ill. Heating and ventilating system. 2,474,048, June 21.

Greiner, Alfred, Cleveland Heights, Ohio, assignor to General Electric Company. Electric lamp of double spiral convolution. 2,473,878, June 21.

Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. 1,3-dioxolane polymers. 2,473,994, June 21.

Gresham, William F., Wilmington, and J. V. E. Hardy, Bellevue, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthesis of metal carbonyls. 2,473,993, June 21.

Gresham, William F., Lindamere, R. E. Brooks, Edgemoor Terrace, and W. E. Grigsby, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthesis of diethyl ketone. 2,473,995, June 21.

Grigsby, William E.: *See*—
Gresham, William F., Brooks, and Grigsby.

Groene, William F., Cincinnati, and H. C. Kemper, Goshen Township, Clermont County, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Drive mechanism for automatic lathes. 2,474,104, June 21.

Grögl, Max F., Barranquilla, Colombia. Dental drill. 2,473,583, June 21.

Groza, John, Detroit, Mich. Sinker. 2,473,644, June 21.

Guardite Corporation, assignee: *See*—
Merriam, Charles J.

Guarnaschelli, Stephen, assignor to The Brockway Company, Naugatuck, Conn. Flexible metal hose connection. 2,473,879, June 21.

Gwaltney, Eugene C., Biddeford Pool, Maine, assignor to Saco-Lowell Shops, Boston, Mass. Device and process for twisting and spinning. 2,473,520, June 21.

Gwaltney, Eugene C., Biddeford Pool, Maine, assignor to Saco-Lowell Shops, Boston, Mass. Twisting device and method. 2,473,521, June 21.

Gwynn, Marion H., Mountain Lakes, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Cleaning metal catalysts with alcoholic caustic solution. 2,473,880, June 21.

H-P-M Development Corporation, assignee: *See*—
Tucker, Warren R.

Haas, Clarence C.: *See*—
Kriegbaum, George M., and Haas.

Hagan Corporation, assignee: *See*—
Markson, Alfred A.

Hagopian, Richard H., Halethorpe, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. High-frequency dielectric heating apparatus. 2,473,881, June 21.

Hagstrom, Jerome E.: *See*—
Johnson, Elmer C., and Hagstrom.

Hall, William M., Lexington, assignor to Raytheon Manufacturing Company, Newton, Mass. Modulation system. 2,473,794, June 21.

Hallberg, Elmer E., and J. C. Verstynen, assignors to Rockford Machine Tool Company, Rockford, Ill. Tracer mechanism for machine tools. 2,473,584, June 21.

Hammerstein, Arthur, Palatine, Ill. Dispenser with slitted resilient diaphragm. 2,473,707, June 21.

Hammerstrom, Karl R., Dormont, Pa., assignor to United States Steel Corporation of Delaware. Double truck mine car body. 2,473,946, June 21.

Hamstrom, Walter P., Seattle, Wash. Leg support device. 2,473,947, June 21.

Hanford, William E., Easton, Pa., J. R. Roland, and W. E. Mochel, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymers from ethylene and branched chain vinyl esters. 2,473,990, June 21.

Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. High-speed telegraphy signal recorder. 2,474,049, June 21.

Hansen, Georg M., Fiskaa, near Kristiansand, assignor to Elektrokemisk A/S, Oslo, Norway. Breaking up the charge in electric smelting furnaces. 2,473,681, June 21.

Hansley, Virgil L., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Partial reduction of polycyclic aromatic hydrocarbons. 2,473,997, June 21.

Harder, Edwin L., and C. E. Valentine, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,473,882, June 21.

Hardy, John V. E.: *See*—
Gresham, William F., and Hardy.

Harker, Donald C.: *See*—
Baker, Benjamin P., and Harker.

Harris, Fred E., Haverhill, Mass., and A. S. Hegeman, Jr., Glen Ridge, D. H. Mitchell, Cranford, and H. N. Snook, Maywood, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Angle measuring mechanism. 2,473,682, June 21.

Harris, Herbert H., Sacramento, Calif. Armrest. 2,474,050, June 21.

Harris, Robert L., assignor to The Standard Oil Company, Cleveland, Ohio. Treatment of crude oil. 2,473,522, June 21.

Harstick, William H., Oak Park, Ill., assignor to International Harvester Company. Speed controlled centrifugal valve. 2,473,948, June 21.

Hartford National Bank and Trust Company, assignee, trustee: *See*—
Jonker, Johan L. H., and Kleynen.
Kröger, Ferdinand A.
Wolf, Menno.

Harvey, Henry S., West Branch, Iowa. Power-operated portable general utility machine. 2,473,883, June 21.

Harvey-Whipple, Incorporated, assignee: *See*—
Carter, George I.

Harwood, Ray D., Elkhart, Ind. Salt and pepper shaker. 2,473,583, June 21.

Hatch, Hernis W., Atlanta, N. Y. Endless belt grader. 2,474,051, June 21.

Hathaway, Claude M., Denver, Colo. Electric pressure head. 2,474,140, June 21.

Hauser, Hermann, Binningen, and M. Bommer, Riehen, Switzerland, assignors to the Swiss firm of Ciba Limited. Anthrimide-carbazole dyestuffs. 2,473,949, June 21.

Hauser, Herman, Binningen, and M. Bommer, Riehen, Switzerland, assignors to the Swiss firm of Ciba Limited. Anthrimide-carbazole dyestuffs. 2,473,950, June 21.

Hayes, Ralph F., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Polymerized vinyl aromatic materials. 2,473,708, June 21.

Hegeman, Andrew S., Jr.: *See*—
Harris, Fred E., Hegeman, Mitchell, and Snook.

Hein, Carl C., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Contact means. 2,473,884, June 21.

Heller, Paul R.: *See*—
Baudry, Rene A., and Heller.

Helliwell, Ernest G., assignee: *See*—
Ransom, Jack.

Hemphill Company, assignee: *See*—
Fregeolle, Oscar.
St. Pierre, Eugene.

Henschen, Edgar, and S. W. Dennis, assignors to Crown Cork & Seal Company, Inc., Baltimore, Md. Container closing apparatus. 2,473,523, June 21.

Herman, Harold M., Chicago, Ill. Telegraphic code teacher. 2,473,749, June 21.

Heywood, Basil J., Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Monoazo dyestuffs. 2,473,885, June 21.

Hibbard, Donald L., and John N. M. Howells, United States Navy. Lead estimation training reflex gun sight. 2,473,524, June 21.

Hickey, Marvin M., South Bend, Ind. Stepladder tray or shelf. 2,473,951, June 21.

Hill, James E., and T. M. Ambler, San Antonio, Tex. Wave heater. 2,474,147, June 21.

Hills, Robert C., and M. F. Dufour, Nicaro, Cuba, assignors to Nicaro Nickel Company, New York, N. Y. Reduction of ores containing nickel. 2,473,795, June 21.

Hillyer, John C., Bartlesville, Okla., and D. A. Nicewander, Borger, Tex., assignors to Phillips Petroleum Company. Inhibiting polymerization and corrosiveness of furfural by mercaptobenzothiazole. 2,473,750, June 21.

Hines, Claude M., Verona, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Relay control system. 2,473,683, June 21.

Hitchcock, John H., assignor to Morgan Construction Company, Worcester, Mass. Machine for manufacturing spherical gears. 2,473,709, June 21.

Hobson, Charles F.: *See*—
Preisman, Louis, and Hobson.

Holland Furnace Company, assignee: *See*—
Weyenberg, Henry, and Tice.

Hollerith, Charles, Jackson, Mich., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio. Steerable tail wheel. 2,473,645, June 21.

Hollerith, Charles, Jackson, Mich., assignor, by mesne assignments, to The B. F. Goodrich Company, Akron, Ohio. Expander tube for brakes. 2,473,646, June 21.

Holst, Paul F. G.: *See*—
Reid, John D., and Holst.

Hood, Arthur, West Long Branch, N. J., and M. Sobel, New York, N. Y., and E. A. Terhune, Red Bank, N. J. Slip ring. 2,473,526, June 21.

Hoop, John G., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Atmosphere production. 2,473,525, June 21.

Hoop, John G., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Apparatus for production of heat-treating atmospheres. 2,473,527, June 21.

Hoover, Howard L., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Unwoven filamentary web and producing same. 2,473,528, June 21.

Hopkins, Charles W.: *See*—
Alquist, Francis N., and Hopkins.

Hordes, Irving, Yonkers, N. Y. Apparatus for casting dental restorations. 2,474,105, June 21.

Horlacher, Herman: *See*—
Wilder, Warren, and Horlacher.

Horr, Daniel G., Spokane, Wash. Axially expansible rotary cutter. 2,473,952, June 21.

Horton, Ronald J., London, England. Hair pad, hairband, or like article. 2,474,148, June 21.

Hosford, Norman F., Towaco, assignor to Bendix Aviation Corporation, Teterboro, N. J. Cabin altitude and oxygen use indicator. 2,473,586, June 21.

Houston, Charles E., San Marino, Calif. Harvester for packing lettuce, cabbage, celery and the like. 2,473,587, June 21.

Howard, Arthur G., Flint, Mich. Fumigating system. 2,473,684, June 21.

Howells, John N. M.: *See*—
Hibbard, Donald L., and Howells.

Huber, Howard E. and M. W., Watertown, N. Y., assignors to The New York Air Brake Company. Relief valve for hydraulic systems. 2,473,053, June 21.

Huber, Matthew W.: *See*—
Huber, Howard E. and M. W.

Hull, Frederick C., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Brazing alloy. 2,473,886, June 21.

Hulstedt, Otis L., Woodhull, Ill. Handy stoker scoop. 2,473,647, June 21.

Hultquist, Martin E., Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y. Preparation of heterocyclic compounds. 2,473,796, June 21.

Hume, Kenneth B., Kew, Melbourne, Victoria, Australia. Apparatus for cutting curved plates used in spherical tanks. 2,474,140, June 21.

Humphreys & Glasgow Limited, assignee: *See*—
MacGregor, Frank A.

Hydraulic Brake Company, assignee: *See*—
La Brie, Ludger E.

I. T. E. Circuit Breaker Company, assignee: *See*—
Rohn, Donald I.

Imperial Chemical Industries Limited, assignee: *See*—
Curd, Francis H. S., and Rose.
Heywood, Basil J.
Sarsfield, Norman F.

Independent Eastern Torpedo Company, The, assignee: *See*—
Kingston, Benson M., and McKinsey.

Innis Speiden and Company, assignee: *See*—
Hickerton, Jack M.

International Harvester Company, assignee: *See*—
Harstick, William H.
Kriegbaum, George M., and Haas.
Orelind, John R.
Van Buskirk, Ernest M.
Welty, Albert B.

Interval Instruments, Inc., assignee: *See*—
Rieber, Frank.

Inventors Guild, The, assignee: *See*—
Berger, Carl W.

Jackson, Herman F., and T. F. Spencer, Detroit, Mich. Heating and pressing comb. 2,474,106, June 21.

Jacobson, Arthur G., assignor, by mesne assignments, to The Miehle Printing Press & Manufacturing Company, Chicago, Ill. Sheet transfer gripper mechanism. 2,474,150, June 21.

Jaeger Machine Company, The, assignee: *See*—
Mandt, Obert G.

Jakeway, Gerald V., assignor to Keeler Brass Company, Grand Rapids, Mich. Control knob of thermoplastic material. 2,473,648, June 21.

Janette, John T., Kenilworth, assignor to Janette Manufacturing Company, Chicago, Ill. Centrifugal switch. 2,473,998, June 21.

Janette Manufacturing Company, assignee: *See*—
Janette, John T.

Jennings, Charles H.: *See*—
Steinert, Emil F., and Jennings.

Jennings, Charles H., Forest Hills, and E. R. Gamberg, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Protecting metal surfaces during soldering and brazing processes. 2,473,887, June 21.

Jensen, John, Chatsworth, Ill. Hobbyhorse. 2,473,640, June 21.

Jillson, Lyman W., Detroit, assignor to Wyandotte Chemicals Corporation, Wyandotte, Mich. Rotary drier seal. 2,473,710, June 21.

Johannsen, Udo K., assignor to Brewer-Titchener Corporation, Cortland, N. Y. Folding support for ironing boards and the like. 2,474,107, June 21.

Johansson, Ernest G., Belmont, assignor to Anchor Manufacturing Company, Boston, Mass. Current distribution panel. 2,473,685, June 21.

Johnson, Anton W., Masson, Quebec, Canada. Doctor operating mechanism. 2,474,052, June 21.

Johnson, Charles E., North Muskegon, assignor to Johnson Products, Inc., Muskegon Heights, Mich. Self-locking tappet screw. 2,473,752, June 21.

Johnson, Elmer C., and J. E. Hagstrom, assignors, by mesne assignments, to The Vendo Company, Kansas City, Mo. Bottle vending machine with magazine rotating on horizontal axis. 2,474,053, June 21.

Johnson, Eric G., Spalding, England. Heating and cooling system for horticultural houses and cloches. 2,473,589, June 21.

Johnson, Howard R., Baltimore, Md. Device for expelling static charges from dielectrical substances. 2,473,751, June 21.

Johnson, Howard R., Baltimore, Md. Microtome and electrostatic dispersal apparatus therefor. 2,473,753, June 21.

Johnson, John, assignor to Combined Optical Industries Limited, Slough, England. Molding lenses and like optical elements. 2,473,588, June 21.

Johnson Products, Inc., assignee: *See*—
Johnson, Charles E.

Jones, Anderson, assignee: *See*—
Long, James I.

Jones, Clinton, Hampton, Va. Electric release for toy guns. 2,474,054, June 21.

Jones, Roy W., Rochester, N. Y., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Static frequency changer. 2,473,990, June 21.

Jonker, Johan L. H., and P. H. J. A. Kleynen, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Amplifier circuits with double control. 2,473,754, June 21.

Jordan, Paul B., and M. Pipkin, Cleveland Heights, Ohio, assignors to General Electric Company. Lead-in wire for electric lamps and similar devices. 2,473,888, June 21.

Joyce, Asa W.: *See*—
Lecher, Hans Z., Scalera, Joyce, and Forster.

Kadleh, Abraham, Long Island City, N. Y. Mixing spout fixture for washbasins. 2,474,108, June 21.

Kaiser, Donald W., Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y. Triazolylene triazines and preparation thereof. 2,473,797, June 21.

Kalmus, Henry P., Chicago, Ill., assignor to Zenith Radio Corporation. Phonograph pickup with mechanical filter. 2,473,650, June 21.

Katz, Herman, Oakland, Calif. Adjustable target stage. 2,473,651, June 21.

Kayser, Guillaume M. A., Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C. Treatment of alkali cellulose. 2,473,954, June 21.

Kearns, Bernard A., and J. Decker, assignors to Cincinnati Grinders Incorporated, Cincinnati, Ohio. Rotary pump and motor hydraulic transmission system. 2,473,711, June 21.

Keating, John P., assignor to Duraknol, Inc., Elkhart, Ind. Electromagnetic mercury relay. 2,474,000, June 21.

Keeler Brass Company, assignee: *See*—
Jakeway, Gerald V.

Keene, Walter L., Dormont, assignor to Superior Steel Corporation, Carnegie, Pa. Composite billet and manufacture thereof. 2,473,686, June 21.

Kegan, Albert I., assignee: *See*—
Lehnherr, June L.

Keiser, Bernhard: *See*—
De Groote, Melvin, and Keiser.

Kelco Company, assignee: *See*—
Steiner, Arnold B., and Rothe.

Keller, Nellie G., and W. J., St. Louis, Mo. Refrigerated fan guard. 2,474,109, June 21.

Keller, William J.: *See*—
Keller, Nellie G. and W. J.

Kellogg, Homer G., Highland Park, assignor to Motor Products Corporation, Detroit, Mich. Method and apparatus for assembling parts. 2,473,590, June 21.

Kemper, Harry C.: *See*—
Groene, William F., and Kemper.
Le Blond, Richard K., and Kemper.

Kendall, Ira H., Potsdam, N. Y., assignor to Cherry-Burrell Corporation, Wilmington, Del. Receptacle handling apparatus. 2,473,955, June 21.

Kephart, John C., assignor to National Alfalfa Dehydrating and Milling Company, Lamar, Colo. Preservation of pigments in alfalfa. 2,474,182, June 21.

Kershaw, Norman G., London, England, assignor, by mesne assignments, to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure relay valve mechanism. 2,473,687, June 21.

Kerst, Donald W., Urbana, Ill., assignor to the United States of America as represented by the Secretary of the Navy. Stereoscopic X-ray pictures with betatron. 2,473,956, June 21.

Kienle, Roy H., Bound Brook, and G. P. Whitcomb, Watchung, N. J., assignors to American Cyanamid Company, New York, N. Y. Nonionic surface active agent. 2,473,798, June 21.

Kilner, Frederick E., assignor to Dowty Equipment Limited, Cheltenham, England. Valve. 2,473,591, June 21.

King, Etta E., and D. P. Tata, Leominster, Mass. Hair curling device. 2,473,957, June 21.

King, Victor L., Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y. Rocket propulsion by reacting alkyl-substituted mononuclear aromatic amines and nitric acid. 2,474,183, June 21.

Kingston, Benson M., Breckenridge, and M. H. McKinsey, Midland, Tex., assignors of one-half to Shell Development Company, San Francisco, Calif., and one-half to The Independent Eastern Torpedo Company, Breckenridge, Tex. Well fluid measurement. 2,473,713, June 21.

Kinney, Joseph, Jr., Bradford Woods, Pa., assignor to American Cladmetals Company. Procedure for making multiply metal stock. 2,473,712, June 21.

Klapman, Sol J., Chicago, Ill. Thermionic vacuum tube circuit for intercommunication systems. 2,473,652, June 21.

Klemperer, Hans, Belmont, assignor to Raytheon Manufacturing Company, Newton, Mass. Alternating current pulser circuit. 2,473,592, June 21.

Klemperer, Hans, Belmont, assignor to Raytheon Manufacturing Company, Newton, Mass. Condenser welding system. 2,473,799, June 21.

Kleynen, Petrus H. J. A.: *See*—
Jonker, Johan L. H., and Kleynen.

Klinger Manufacturing Company Limited, The, assignee: *See*—
Collidge, Albert E., Dawes, and Gilbert.

Knight, George H. F., Basingstoke, England. Mounting and driving the land rotor of agricultural or like vehicles. 2,473,800, June 21.

Knight, Theodore M., Alexandria, and D. A. McBee, Vienna, Va. Feed line machine. 2,473,529, June 21.

Knoll, Alvin H., assignor to The Procter & Gamble Company, Cincinnati, Ohio. Making bar soap with ingrained emblems. 2,473,530, June 21.

Knowles, Raymond L.: *See*—
Colton, Henry S., Frischmuth, and Knowles.

Kobe, Inc., assignee: *See*—
Coberly, Clarence J.

Kohnstamm, H., & Co. Inc., assignee: *See*—
Rich, Edward A.

Kranf, Herman C., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Controller. 2,473,880, June 21.

Kreidl, Norbert J., Rochester, N. Y., assignor to Monsanto Chemical Company. Black glass and making. 2,473,958, June 21.

Kriegbaum, George M., and C. C. Haas, Richmond, Ind., assignors to International Harvester Company. Reel drive for planters. 2,473,959, June 21.

Krister, Charles J.: *See*—
Eubank, Lowell D., and Krister.

Kröger, Ferdinand A., Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Silicate-titanate phosphors. 2,473,960, June 21.

Kroll, Alfred J., Forestville, and A. W. Schnick, assignors to The Cuno Engineering Corporation, Meriden, Conn. Igniter and lamp plug. 2,473,890, June 21.

Kropa, Edward L., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. Emulsions of polymerizable compositions. 2,473,801, June 21.

Krotz, Alvin S., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Rail truck suspension. 2,473,714, June 21.

Kuh, Erwin, New Brunswick, and H. S. Barnaby, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y. Preparation of 2,4,5-triamino-6-hydroxypyrimidine. 2,473,802, June 21.

Kuh, Erwin, New Brunswick, and J. M. Smith, Jr., North Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y. Purifying glutamic acid amides of pteroylglutamic acid. 2,474,184, June 21.

Kushman, Eleanor, assignee: *See*—
West, Harry D.

La Brie, Ludger E., assignor to Hydraulic Brake Company, Detroit, Mich. Master cylinder. 2,473,803, June 21.

Lacey, Robert M., West Orange, N. J., assignor to The Merritt Lacey Corporation, New York, N. Y. Image copying projection machine. 2,474,055, June 21.

Lackoff, Samuel K., Astoria, N. Y., assignor to Telomatic Products, Inc., Passaic, N. J. Centralized music transmission system. 2,474,110, June 21.

Laidig, Alfred H.: *See*—
Okress, Ernest C., and Laidig.

Lamhrechts, Kenneth A., St. Louis, Mo. Necktie and holder assembly. 2,473,593, June 21.

La Mont, Charles T., Milwaukee, Wis. Cumbination comb and toilet article. 2,473,594, June 21.

Lampiris, William, assignor to Geuder, Paeschke & Frey Co., Milwaukee, Wis. Induction can soldering machine. 2,473,755, June 21.

Lancaster, John T., Newton, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Turret type last pulling and relasting machine. 2,473,595, June 21.

Lantec, Clarence W., Bartlett, Ill., assignor to Bietman Electric Company. Disintegrator rotor for hammer mills and the like. 2,473,531, June 21.

Larsen, Leo M., Spokane, Wash. Reciprocating tool. 2,474,056, June 21.

Larson, Glen M.: *See*—
Lewis, Howard H., and Larson.

Lavietes, David P., Brooklyn, N. Y. Smoker's pipe. 2,473,715, June 21.

Lazare, Philippe, Marseille, France. Paintbox. 2,473,532, June 21.

Lebedeff, Michael N., Chicago, Ill., assignor to Chicago Bridge & Iron Company. Method and apparatus for corrugating sheet metal by a reciprocating bender with a pivoted side shaper. 2,473,533, June 21.

Le Blond, R. K., Machine Tool Company, The, assignee: *See*—
Cooper, Nelson D., and Huchty.
Groene, William F., and Kemper.
Le Blond, Richard K., and Kemper.
Waterson, Arthur P.

Le Blond, Richard K., Cincinnati, and H. C. Kemper, Goshen Township, Clermont County, assignors to The R. K. Le Blond Machine Tool Co., Cincinnati, Ohio. Milling machine feed mechanism. 2,473,596, June 21.

Lecher, Hans Z., Plainfield, M. Scalera, Somerville, A. W. Joyce, Plainfield, and W. S. Forster, Maplewood, N. J., assignors to American Cyanamid Company, New York, N. Y. Preparing 4-amino-1,8-naphthalic acid imides. 2,474,185, June 21.

Lechthaler, Charles H., J. W. Payne, and P. D. Valas, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Contacting gases and moving particle form solids. 2,474,199, June 21.

Ledoux, Arthur T., Littleton, N. H. Draft control for oil burners. 2,473,804, June 21.

Lee Rubber & Tire Corporation, assignee: *See*—
Carlin, James C., and Lloyd.

Lee, Russell, Wenonah, and F. E. Ray, Mantua, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Moisture content-temperature correlation in a moving bed catalyst regeneration process. 2,474,198, June 21.

Lehmberg, William H.: *See*—
Raymond, James J., and Lehmberg.

Lehnherr, June L., Newton, Kans., assignor of one-third to A. I. Kegan, Chicago, Ill. Cutting device. 2,473,756, June 21.

Leland, George H., Dayton, Ohio. Bomb shackle and release. 2,473,597, June 21.

Leland, George H., Dayton, Ohio. Fabricated rotary solenoid. 2,473,598, June 21.

Lemaigre-Voreaux, Pierre: *See*—
Penon, Rene, and Lemaigre-Voreaux.

Le Tourneau, R. G., Inc., assignee: *See*—
Le Tourneau, Robert G.

Le Tourneau, Robert G., Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif. Endless track. 2,474,057, June 21.

Lever Brothers Company, assignee: *See*—
Wilson, Arthur D., and Dalziel.

Levine, Irving E., Berkeley, assignor to California Research Corporation, San Francisco, Calif. Oxidation of organic compounds. 2,474,001, June 21.

Levine, Irving E., and W. H. Claussen, Berkeley, assignors to California Research Corporation, San Francisco, Calif. Producing dicarboxylic acid anhydrides. 2,474,002, June 21.

Levy, Marion L., Cleveland, Ohio. Bearing bracket. 2,474,151, June 21.

Levy, Marion L., Cleveland, Ohio. Directional air flow louver. 2,474,152, June 21.

Lewis, Howard B., Venice, and G. M. Larson, Hollywood, Calif. Flexible ammunition chute. 2,473,716, June 21.

Liebel, Robert A., Allentown, Pa. Change of direction rollers. 2,473,599, June 21.

Lifton, Lewis, New York, N. Y. Stabilized brief case. 2,474,003, June 21.

Liger, Andrew W., Westboro, Mass., assignor, by mesne assignments, to Battelle Development Corporation, Columbus, Ohio. Composition for and method of electrode-position of lead. 2,474,092, June 21.

Lillard, Urban, Miami, Fla. Rifle sight conversion attachment. 2,473,891, June 21.
Lily-Tulip Cup Corporation, assignee: *See*—
Amberg, Walter E.
Linde Air Products Company, The, assignee: *See*—
Lobosco, Roscoe H.
Liquidometer Corporation, The, assignee: *See*—
Edelman, Abraham.
Liska, Raymond H.: *See*—
Verderber, Joseph, and Liska.
Littelfuse, Incorporated, assignee: *See*—
Sundt, Edward V.
Little, Harry C., San Rafael, Calif. Oil burner having air admission and fuel vaporization means. 2,473,653, June 21.
Livesay, Everett G., New Orleans, La. Flame cutting torch machine. 2,474,153, June 21.
Lloyd, Rex R., Boulder City, Nev. Production of magnesium oxide. 2,473,534, June 21.
Lloyd, Robert R.: *See*—
Carlin, James C., and Lloyd.
Lobl Manufacturing Company, The, assignee: *See*—
Porter, Malcolm E.
Lobosco, Roscoe R., Elizabeth, N. J., assignor to The Linde Air Products Company. Coating work with an electron-emissive material to improve inert gas-shielded refractory-electrode alternating current arc welding. 2,473,600, June 21.
Lobosco, Roscoe R., Elizabeth, N. J., assignor to The Linde Air Products Company. Gas shielded direct-current arc welding. 2,473,601, June 21.
Loder, Donald J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of ethyleneurea. 2,474,004, June 21.
Loeser, George H., Maiden, and C. C. Gangie, Woburn, assignors to United-Carr Fastener Corporation, Cambridge, Mass. Rotary cleaning tool. 2,473,654, June 21.
Logan, Howard E., assignee: *See*—
Domke, Edward A.
Lohn, Leif K., Norwich, N. Dak. Combine platform control. 2,473,655, June 21.
Loisy, René A.: *See*—
Beja, Maurice, and Loisy.
Long, James L. Levy, assignor of twenty per cent to G. Moody, twenty per cent to A. Jones, and twenty per cent to S. D. Gray, North Little Rock, Ark. Dash-controlled hydraulic jack. 2,473,757, June 21.
Lorain Products Corporation, assignee: *See*—
Pohm, George H.
Loumiet et Lavigne, Jean, Plays de la Teja, Itabo, Cuba. Fluid separator. 2,473,602, June 21.
Ludwig, Leon R., Wilkinsburg, and R. P. Baker, Turtle Creek, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,473,892. June 21.
Lyle, Frederick W., Irwin, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Object detecting and indicating device. 2,473,893, June 21.
Lynn, Clarence, Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Furnace structure. 2,473,894, June 21.
Lyon, Norman W., and R. E. Brown, Springfield, assignors to Package Machinery Company, East Longmeadow, Mass. Machine for forming article supporting pallets for wrapping machines. 2,473,656, June 21.
MacGregor, Frank A., assignor to Humphreys & Glasgow Limited, Westminster, England. Stack valve of water gas generators and the like. 2,474,111, June 21.
Maeder, Abbott S., deceased, by L. M. Murphy, administratrix, East Hempstead, N. Y., assignor to The Sperry Corporation. Switching and modulation system. 2,473,535, June 21.
Maillen & Benson, Inc., assignee: *See*—
Maillen, Harry D.
Maillen, Harry D., assignor to Maillen & Benson, Inc., Long Beach, Calif. Tip cleaner holder. 2,473,758, June 21.
Mallory, Marion, assignor to The Mallory Research Company, Detroit, Mich. Two-cycle opposed piston engine. 2,473,759, June 21.
Mallory, Marion, assignor to The Mallory Research Company, Detroit, Mich. Internal-combustion engine. 2,473,760, June 21.
Mallory, Marion, assignor to The Mallory Research Company, Detroit, Mich. Speed control for internal-combustion engines. 2,473,761, June 21.
Mallory, Marion, assignor to The Mallory Research Company, Detroit, Mich. Speed control for internal-combustion engines. 2,473,762, June 21.
Mallory, Marion, Detroit, Mich. Ignition timing control means for internal-combustion engines. 2,473,805, June 21.
Mallory, Marion, Detroit, Mich. Engine governor. 2,473,806, June 21.
Mallory, Marion, Detroit, Mich. Engine governor. 2,473,807, June 21.
Mallory, Marion, Detroit, Mich. Fuel temperature control for internal-combustion engines. 2,473,808, June 21.
Mallory Research Company, The, assignee: *See*—
Mallory, Marion.
Mandt, Obert G., and A. S. Millikin, assignors to The Jaeger Machine Company, Columbus, Ohio. Machine or apparatus for surfacing roads. 2,473,961, June 21.
Marks, Milton M., assignor to Crane Co., Chicago, Ill. Reinforced core. 2,474,180, June 21.
Markson, Alfred A., Mount Lebanon, assignor, by mesne assignments, to Hagen Corporation, Pittsburgh, Pa. Pressure totalizing device. 2,473,717, June 21.
Maron, Meyer, assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Oscillograph circuit to avoid distortion. 2,473,718, June 21.
Marrocco, Guy D., Brooklyn, assignor to Carman & Co., Inc., New York, N. Y. Safety pin. 2,474,112, June 21.
Martin, Gustav J., and H. Urist, assignors to The National Drug Company, Philadelphia, Pa. 2-acetoxybenzyl acetylsalicylate. 2,474,005, June 21.
Martin, Lynn P.: *See*—
Olson, Wilbur K., and Martin.
Martin, Lynn P., assignor to W. A. Scheaffer Pen Company, Fort Madison, Iowa. Clip for writing instruments. 2,473,688, June 21.
Mathey, Donald N., Platte, S. Dak. Holder attachment for wagons. 2,473,763, June 21.
Mathieson Chemical Corporation, assignee: *See*—
Woodward, Eric R.
Maw, Harold J.: *See*—
Smith, Ellis, Crabtree, Naylor, and Maw.
Maycock, Russel L., Oakland, assignor to Shell Development Company, San Francisco, Calif. Rotary contactor for fluids. 2,474,006, June 21.
Maycock, Russel L., Oakland, assignor to Shell Development Company, San Francisco, Calif. Method of and apparatus for contacting fluids. 2,474,007, June 21.
McBee, David A.: *See*—
Knight, Theodore M., and McBee.
McBee, Lance T., Paris Island, S. C. Cervical splint. 2,474,200, June 21.
McCauley, Clandius R., New Orleans, La. Liquid level translating means. 2,474,154, June 21.
McClintock, Edward H., West Springfield, Mass. Window frame and sash. 2,473,657, June 21.
McCoy, Harry E., U. S. Navy. Device to reproduce timing disks. 2,473,536, June 21.
McCullough, Paul J., assignor, by mesne assignments, to The Toastswell Company, Incorporated, St. Louis, Mo. Automatic toaster. 2,473,719, June 21.
McCutcheon, Frank G., Henryetta, Okla., assignor to The Eagle-Picher Company. Recovering cadmium. 2,473,962, June 21.
McDonald, Harry W., Kansas City, Mo. Rotary bit operating mechanism. 2,473,537, June 21.
McIntire, Otis R., assignor to The Dow Chemical Company, Midland, Mich. Liquid styrene-butadiene interpolymers. 2,473,538, June 21.
McKelvey, Robert E., Los Angeles, Calif. Speed selection unit. 2,473,963, June 21.
McKinsey, Mark H.: *See*—
Kingston, Benson M., and McKinsey.
McLaughlin, Kenneth M.: *See*—
Pryalak, Nicholas E., and McLaughlin.
McNeill, Locksley D., Winnipeg, Manitoba, Canada. Collar stiffener. 2,474,058, June 21.
Meacham, Lamed A., New Providence, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Stabilization of cathode beam tubes. 2,473,691. June 21.
Mednick, Philip, Brooklyn, N. Y. Chair. 2,473,895, June 21.
Melzer, Julius F., Port Chester, N. Y. Heating apparatus. 2,474,155, June 21.
Merck & Co., Inc., assignee: *See*—
Wolf, Frank J.
Merriam, Charles J., Winnetka, Ill., assignor, by mesne assignments, to Guardite Corporation, Wilmington, Del. High-frequency drying. 2,473,539, June 21.
Merritt Lacey Corporation, The, assignee: *See*—
Lacey, Stobert M.
Metafiltration Company Limited, The, assignee: *See*—
Pickard, Joseph A.
Metals & Controls Corporation, assignee: *See*—
Davignon, Ermand H.
Meyer, William H., St. Louis, Mo., assignor to General Steel Castings Corporations, Granite City, Ill. Railway truck pedestal liner. 2,474,008, June 21.
Michiana Products Corporation, assignee: *See*—
Nygren, Carl.
Miehle Printing Press & Manufacturing Company, The, assignee: *See*—
Jacobson, Arthur G.
Peyrebrune, Henri E.
Miklina, Stanley J., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Frictional servomotor. 2,473,896, June 21.
Miller, John W., assignor to Motor Wheel Corporation, Lansing, Mich. Heater. 2,473,810, June 21.
Miller, Josef H., Seattle, Wash. Marine propeller device. 2,473,603, June 21.
Miller, Raymond J., assignor to Bendix Aviation Corporation, Detroit, Mich. Fluid coupling. 2,473,809, June 21.
Miller, Stanley L., Hinckley, England. Electrical musical instrument. 2,473,897, June 21.

Miller, Tobias, Cleveland Heights, Ohio. Electrical motor and dynamo brush. 2,473,540, June 21.
Miller, William J., assignor to Elliott Bay Mill Co., Seattle, Wash. Roller pressure bar for veneer lathes. 2,473,541, June 21.
Milligan, Lawrence D., Lake Forest, Ill. Broiler. 2,473,658, June 21.
Millikin, Arnold S.: *See*—
Mandt, Obert G., and Millikin.
Miner, W. H., Inc., assignee: *See*—
Dath, George E.
Minneapolis-Honeywell Regulator Company, assignee: *See*—
Baak, Albert E.
Sparrow, Hubert T.
Sparrow, Hubert T., and Baak.
Wild, Rudolf F.
Minnesota Mining & Manufacturing Company, assignee: *See*—
Hoover, Howard L.
Mitchell, Donald H.: *See*—
Harris, Fred E., Hegeman, Mitchell, and Snook.
Mochel, Walter E.: *See*—
Hanford, William E., Roland, and Mochel.
Molyneux, Cecil P., Hampton Bays, assignor to Filtors, Incorporated, Long Island City, N. Y. Oil filter and pump combination. 2,474,009, June 21.
Monsanto Chemical Company, assignee: *See*—
Barreto, Antonio.
Hayes, Ralph F.
Kreidl, Norbert J.
Montague, Stephen F., Oswego, assignor, by mesne assignments, to The Diamond Match Company, New York, N. Y. Apparatus for forming wooden spoons from blanks. 2,473,720, June 21.
Montclair Research Corporation, assignee: *See*—
Rost, John H.
Montgomery, H. E., assignee: *See*—
Compton, Henry P.
Montgomery, Terryl B., Wauwatosa, and T. H. Bloodworth, Waukesha, assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Current limiting system for Ward-Leonard drives. 2,473,721, June 21.
Moody, Glen, assignee: *See*—
Long, James I.
Moore Enmeling & Manufacturing Company, The, assignee: *See*—
Moore, Walter B.
Moore, Walter B., Coshocton, assignor to The Moore Enameling & Manufacturing Company, West Lafayette, Ohio. Handle for cooking utensils. 2,473,964, June 21.
Morgan Construction Company, assignee: *See*—
Hitchcock, John H.
Morrison, James J., and A. L. Duna, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey. Self-supporting aerial electric conducting cable. 2,473,965, June 21.
Morrison, Frederick C., Buffalo, N. Y. Inclined current hydraulic separator. 2,474,059, June 21.
Mosher, James N., South Bend, Ind. Cabinet and exercising device. 2,474,060, June 21.
Motor Products Corporation, assignee: *See*—
Kellogg, Homer G.
Motor Research Corporation, assignee: *See*—
Allison, William D.
Motor Wheel Corporation, assignee: *See*—
Miller, John W.
Moulton, Harold R., assignor to American Optical Company, Southbridge, Mass. Producing thin microporous silica coatings having reflection reducing characteristics and the articles so coated. 2,474,061, June 21.
Mowat, John H., and J. H. Boothe, Pearl River, assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y. Desoxy iso-xanthopterins and making same. 2,473,811, June 21.
Muntwyler, Charles L., Oak Park, and E. J. Frank, Cicero, assignors to AA Wire Products Co., Chicago, Ill. Garment hanger. 2,473,898, June 21.
Muros, Joseph, Cambridge, assignor to Gillette Safety Razor Company, Boston, Mass. Blade magazine. 2,473,812, June 21.
Murphy, Daniel W., West Islip, N. Y. Undergarment for men. 2,473,692, June 21.
Murphy, Gerald E., Portsmouth, Ohio. Clamping ring. 2,474,062, June 21.
Murphy, Howard, Glen Ridge, N. J., assignor to Curtiss-Wright Corporation. Articulated and universal joint for propellers and other mechanisms. 2,473,899, June 21.
Murphy, Lauretta M., administratrix: *See*—
Maeder, Abbott S.
Musgrave, Herman C., East Cleveland, assignor to Towmotor Corporation, Cleveland, Ohio. Industrial truck. 2,473,859, June 21.
Muth, Frank W., Green Island, N. Y. Page notching device. 2,473,604, June 21.
Myers, Latimer D., and J. D. Fitzpatrick, assignors to Emery Industries, Inc., Cincinnati, Ohio. Plasticizer. 2,474,010, June 21.
Nachman Corporation, assignee: *See*—
Gleason, William W.
Namenyi-Katz, Laszlo, London, assignor of one-half to Pursehill Laboratories Limited, Boreham Wood, England. Counting mechanism. 2,474,158, June 21.
Napier, D., & Son Limited, assignee: *See*—
Chambertin, Reginald H. D., Wynne, and Skellern.
Sammons, Herbert, and Cowdrey.
National Alfalfa Dehydrating and Milling Company, assignee: *See*—
Kephart, John C.
National Blank Book Company, assignee: *See*—
Schade, John.
National Cash Register Company, The, assignee: *See*—
Adams, Clyde S.
National Drug Company, The, assignee: *See*—
Martin, Gustav J., and Urist.
National Smelting Company Limited, The, assignee: *See*—
Robson, Stanley.
Navy, United States of America, as represented by the Secretary of the, assignee: *See*—
Kerst, Donald W.
Ross, Donald E.
Schuck, Oscar H.
Naylor, Sydney: *See*—
Smith, Ellis, Crabtree, Naylor, and Maw.
Needlman, Barney, Chicago, Ill. Display alarm. 2,474,157, June 21.
Neely, William H., assignor to The Universal Wire Spring Company, Cleveland, Ohio. Spring clip. 2,474,158, June 21.
Nelson, Alex A., Pleasant Ridge, Mich. Molding hollow articles. 2,473,722, June 21.
Nelson, Alex A., Pleasant Ridge, Mich. Making prosthesis. 2,473,723, June 21.
New England Plastic Co., Inc., assignee: *See*—
Eastman, Nathaniel.
Newton, Herman S., Temple, Tex. Brush sander head. 2,474,063, June 21.
New York Air Brake Company, The, assignee: *See*—
Huber, Howard E. and M. W.
Nicaro Nickel Company, assignee: *See*—
Hills, Robert C., and Dufour.
Nicewander, Daniel A.: *See*—
Hillyer, John C., and Nicewander.
Norwood Company, The, assignee: *See*—
Bode, Robert G.
Nygren, Carl, Michigan City, Ind., assignor to Michiana Products Corporation. High-temperature fan. 2,473,813, June 21.
Nygren, Carl, Michigan City, Ind., assignor to Michiana Products Corporation. High-temperature fan. 2,473,814, June 21.
Oakley, John, Springfield, assignor to Perkins Machine and Gear Company, West Springfield, Mass. Tool apparatus. 2,473,815, June 21.
Okress, Ernest C., Montclair, and A. H. Laidig, Bloomfield, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Ultra high frequency coupler between contiguous ends of aligned wave guide sections. 2,473,724, June 21.
Olson, Albert M., Wauwatosa, assignor to Chain Belt Company, Milwaukee, Wis. Control system for fluid motors. 2,474,187, June 21.
Olson, Wilbert E., St. Paul, Minn. Quick-change gun sight. 2,473,966, June 21.
Olson, Wilbur K., and L. P. Martin, assignors to W. A. Sheaffer Pen Company, Fort Madison, Iowa. Clip for writing instruments. 2,473,690, June 21.
Orelind, John E., Wilmette, Ill., assignor to International Harvester Company. Speed controlled centrifugal valve. 2,473,967, June 21.
Orlando, Anthony, Bronx, N. Y. Platform type shoe, slipper or the like and making same. 2,473,605, June 21.
Osipow, Lloyd I., Bronx, N. Y. Electric steaming stand. 2,474,113, June 21.
Oswald, Emile, Rockaway Park, N. Y. Hair clip. 2,473,725, June 21.
Overly, Lloyd H., Maryville, Tenn. Structural metal awning. 2,474,011, June 21.
Package Machinery Company, assignee: *See*—
Lyon, Norman W., and Brown.
Padowicz, Henry N., Livingston, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of compounding rosin, resin oil, and polyisobutylene. 2,473,606, June 21.
Paper Patents Company, assignee: *See*—
Cralc, Kenneth A.
Park, Allan J., Lakewood, Ohio. Clamp. 2,473,764, June 21.
Parker, Samuel P., assignor, by mesne assignments, to Callaway Mills Company, La Grange, Ga. Belting. 2,473,607, June 21.
Parmann, Edwin A., assignor to Furnas Electric Company, Batavia, Ill. Welded structure and assembling same. 2,473,660, June 21.
Patents, Inc., assignee: *See*—
Colquitt, Odie.
Paton, Richard T., New York, N. Y. Corneal trephine. 2,473,968, June 21.
Paul, Joseph, Milwaukee, Wis. Sanding block. 2,474,064, June 21.
Payne, John W.: *See*—
Lechthaler, Charles H., Payne, and Valas.
Payne, W. Harvey, & Co., assignee: *See*—
Payne, William H.
Payne, William H., Hinsdale, assignor to W. Harvey Payne & Co., Chicago, Ill. Electric pump. 2,473,726, June 21.
Payot, Charles, assignee: *See*—
Ruchti, Charles.

Peabody, Howard B., Lake Forest, assignor to The Pioneer Company, Chicago, Ill. Double-acting solenoid for control of model railroad switches. 2,473,661, June 21.

Pejois, Louis G. A., Asnieres, assignor to P. Rabanit, Paris, France. View taking apparatus. 2,474,159, June 21.

Penon, René, St. Cloud, and P. Lamaigre-Voreaux, Paris, France, assignors to General Electric Company. Electrode coating process. 2,473,900, June 21.

Perkins, Julian L., assignor to Perkins Machine and Gear Company, West Springfield, Mass. Drive mechanism. 2,473,816, June 21.

Perkins Machine and Gear Company, assignee: *See*—
Oakley, John.
Perkins, Julian L.

Permanente Metals Corporation, assignee: *See*—
Byrns, Alva C.

Petrolite Corporation, Ltd., assignee: *See*—
De Groote, Melvin, and Keiser.

Peyrebrune, Henri E., River Forest, assignor, by mesne assignments, to Miehle Printing Press and Manufacturing Company, Chicago, Ill. Ductor roller adjustment and method. 2,474,160, June 21.

Pfager, Harry M., St. Louis, Mo., assignor to General Steel Castings Corporation, Granite City, Ill. Railway truck. 2,474,012, June 21.

Phelps, Allen S., Orangeburg, assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y. Production of riboflavin. 2,473,817, June 21.

Phelps, Allen S., Orangeburg, assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y. Producing riboflavin. 2,473,818, June 21.

Philco Corporation, assignee: *See*—
Curtiss, George E., Jr.
Sunstein, David E.

Phillips Petroleum Company, assignee: *See*—
Garretson, Owen L.
Hillyer, John C., and Nicewander.
Platts, Vern O.
Stormont, Joseph E.

Philpott, La Verne R., Washington, D. C. Electric tachometer. 2,473,542, June 21.

Piatkowski, Stephen L., assignee: *See*—
Domke, Edward A.

Pickard, Joseph A., Acton, London, assignor to The Metafiltration Company Limited, Hounslow, England. Lubricating oil filter. 2,474,161, June 21.

Pierce, Lawrence, Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Push button operated circuit interrupter. 2,473,901, June 21.

Pioneer Company, The, assignee: *See*—
Peabody, Howard B.

Pipkin, Marvin: *See*—
Jordan, Paul B., and Pipkin.

Pittman, Ralph R., North Little Rock, Ark. Multiple gap arc interrupter. 2,473,819, June 21.

Platts, Vern O., Phillips, Tex., assignor to Phillips Petroleum Company. Liquid flow measuring apparatus. 2,473,765, June 21.

Plock, John, Southold, N. Y. Oyster opening method. 2,473,608, June 21.

Plock, John L., Southold, N. Y. Oyster opening apparatus. 2,473,609, June 21.

Plymold Corporation, assignee: *See*—
Goldman, Paul R.

Pohl, Herman L., San Francisco, Calif., assignor to Dispos-A-Tube, Inc. Enema tube. 2,474,188, June 21.

Pohm, George H., assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio. Rectifying arrangement. 2,473,662, June 21.

Pollard, Charles E., Jr., Hohokus, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Mercury contact device. 2,473,693, June 21.

Polymerizable Products Limited, assignee: *See*—
Weizmann, Charles.

Porter, Grover D., Roscoe, Ill. Distribution apparatus. 2,474,065, June 21.

Porter, Malcolm E., assignor to The Lobl Manufacturing Company, Middleboro, Mass. Electric switch. 2,474,189, June 21.

Porter, Malcolm E., assignor to The Lobl Manufacturing Company, Middleboro, Mass. Thermostatic switch. 2,474,190, June 21.

Prahman, Charles E., Cincinnati, Ohio. Unit for hanging and protecting a garment. 2,473,902, June 21.

Preisman, Louis, and C. F. Hobson, assignors to Barium Reduction Corporation, Charleston, W. Va. Making hydrogen sulfide. 2,474,066, June 21.

Preisman, Louis, assignor to Barium Reduction Corporation, Charleston, W. Va. Production of carbon bisulfide and hydrogen sulfide. 2,474,067, June 21.

Procter & Gamble Company, The, assignee: *See*—
Knoll, Alvin H.

Pryalak, Nicholas E., Florham Park, and K. M. McLaughlin, Summit, N. J., assignors to Radio Corporation of America. Ultra high frequency electron discharge device. 2,473,909, June 21.

Purifoy, George R., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric control system for vehicle ride stabilizing equipment. 2,473,903, June 21.

Rabanit, Paul, assignee: *See*—
Pejois, Louis G. A.

Radio Corporation of America, assignee: *See*—
Atwood, John B., and Trevor.
Barton, Loy E.
Crosby, Murray G.
Day, James R.
Dimmick, Glenn L.

Pryalak, Nicholas E., and McLaughlin.
Wheeler, Benjamin F.
Wickizer, Gilbert S., and Brown.

Ramsaur, Walter R., assignor to The Garrett Corporation, Airresearch Manufacturing Company division, Los Angeles, Calif. Oil cooler having automatic bimetal thermostat controlled shutter. 2,474,162, June 21.

Randolph, Arthur J., Santa Rosa, Calif. Apparatus for the manufacture of studs. 2,473,543, June 21.

Ransom, Jack, Cardiff, Wales, assignor of one-third to E. Sanders, Dunnington, and one-third to E. G. Helliwell, Tettenhall, England. Rocking horse. 2,474,114, June 21.

Rataiczak, Francis I., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,473,904, June 21.

Rawis Brothers Company, assignee: *See*—
Rawis, Vaughn.

Rawis, Vaughn, assignor to Rawis Brothers Company, Lima, Ohio. Tread lug rebuilding method for tires. 2,474,013, June 21.

Ray, Frederick E.: *See*—
Lee, Russell, and Ray.

Raymond, James J., Newburgh, N. Y., and W. H. Lehmberg, Riverside, Conn., assignors to American Felt Company, Boston, Mass. Making microporous sheet material. 2,474,201, June 21.

Raytheon Air Beam, Inc., assignee: *See*—
Doremus, John A.

Raytheon Manufacturing Company, assignee: *See*—
Anderson, Mauritz L.
Brown, William C.
Dawson, John W.
Faulk, Donald P.
Gardner, Bernard C.
Hall, William M.
Klemperer, Hans.
Richards, Hans K.
Schmidt, Robert C.
Smith, Charles G.
Spencer, Percy L.
Stiefel, Karl J.
Stolberg, Sven A.
Stutsman, Paul W.
Tuller, William G.
Young, Kenneth A.

Read, Julia, New York, N. Y. Pettibra slip. 2,474,115, June 21.

Rehberg, Chessie E., Glenside, and C. H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture. Polyalkylcyclohexanol acrylates. 2,473,544, June 21.

Reid, Graeme, Essex Fells, N. J. Variable-speed power transmission. 2,473,545, June 21.

Reid, John D., Cincinnati, and P. F. G. Holst, Mount Healthy, assignors to Avco Manufacturing Corporation, Cincinnati, Ohio. Tone control. 2,474,101, June 21.

Reid, Ronald, Iriam, England. Automatic control system. 2,473,905, June 21.

Remington Rand Inc., assignee: *See*—
Thierfelder, Emil F.

Rendel, George H., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Apparatus for measuring differential speed. 2,474,116, June 21.

Rendel, George H., Mount Lebanon, Pa., assignor to Carnegie-Illinois Steel Corporation. Thickness gauge. 2,474,117, June 21.

Renick, Wendell E., Grove City, assignor to The Denison Engineering Company, Columbus, Ohio. Manually operated hydraulic press. 2,473,694, June 21.

Rhinelander Paper Company, assignee: *See*—
Fries, Karl W.

Ricards, Charles L.: *See*—
Tollison, Paul L., and Ricards.

Rich, Edward A., Brooklyn, assignor to H. Kohnstamm & Co. Inc., New York, N. Y. Cover cloth for clothes pressing machines. 2,473,906, June 21.

Richards, Hans K., Chicago, Ill., assignor, by mesne assignments, to Raytheon Manufacturing Company. Magnetron-type phonograph pickup. 2,473,820, June 21.

Richardson, Harry C., assignor to The Troy Sunshade Company, Troy, Ohio. Window mechanism. 2,473,821, June 21.

Riche, Arthur L., Freeport, Ill., assignor to First Industrial Corporation, Wilmington, Del. Snap acting device and electric switch. 2,473,970, June 21.

Richey, Ralph C., Chicago, Ill., assignor to American Box Board Company, Grand Rapids, Mich. Box partition. 2,473,766, June 21.

Ridgely, Neville R., Jr., and C. B. Coleman, Baltimore, Md., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Remote tuner control system. 2,473,907, June 21.

Rieber, Frank, assignor to Interval Instruments, Inc., New York, N. Y. Barometer. 2,473,610, June 21.

Riemer, George, Chicago, Ill. Check swing hinge. 2,474,164, June 21.

Riemer, Leonard E., assignee: *See*—
Domke, Edward A.

Riley, Charles P., assignor to American Optical Company, Southbridge, Mass. Gripping means for microscope mechanical stages. 2,474,163, June 21.

Riley Stoker Corporation, assignee: *See*—
Balmer, James A.

Roberts, Ann G., Chestertown, Md. Hair drying apparatus. 2,474,165, June 21.

Roberts, Earl, Easton, Pa. Plural lens camera. 2,473,707, June 21.

Robertson, Edward R., St. Margarets-on-Thames, Twickenham, England, assignor, by mesne assignments, to Fram Corporation, East Providence, R. I. Oil filtering apparatus. 2,473,727, June 21.

Robinson Aviation, Inc., assignee: *See*—
Robinson, Leslie V.

Robinson, Edward A., Pittsburgh, Pa., assignor to Dismond Alkali Company, Cleveland, Ohio. Water softening detergent and making same. 2,473,822, June 21.

Robinson, Leslie V., assignor to Robinson Aviation, Inc., New York, N. Y. Compression testing apparatus. 2,474,118, June 21.

Robson, Stanley, Redland, Bristol, assignor to The National Smelting Company Limited, London, England. Production of zinc. 2,473,611, June 21.

Rockford Machine Tool Company, assignee: *See*—
Halberg, Elmer E., and Verstynen.

Rohm & Haas Company, assignee: *See*—
Roctnick, Hewman M.

Rohrbach, John J., Rochester, assignor to Shuron Optical Company, Inc., Geneva, N. Y. Plastic brace bar spectacle with pivoting lens connections. 2,474,119, June 21.

Roland, John R.: *See*—
Hanford, William E., Roland, and Mochel.

Rose, Francis L.: *See*—
Curd, Francis H. S., and Rose.

Ross, Donald E., Ocean Beach, Calif., assignor to the United States of America as represented by the Secretary of the Navy. Underwater transducer. 2,473,971, June 21.

Rothe, Lloyd B.: *See*—
Steiner, Arnold B., and Rothe.

Ruben, Samuel, New Rochelle, N. Y. Alkaline primary cell. 2,473,546, June 21.

Rubin, Herbert, New York, N. Y. Supporting means for basketball baskets. 2,473,908, June 21.

Ruchti, Charles, assignor of one-third to H. Besson and one-third to C. Payot, Lausanne, Switzerland. Duct element, intended in particular for laying electric cables. 2,473,909, June 21.

Ruchty, Eugene A.: *See*—
Cooper, Nelson D., and Ruchty.

Ruddies, George F., Chicago, Ill. Preserving alkyl metal compounds. 2,473,972, June 21.

Ruiz, Ignacio L., New York, N. Y. Crab trap. 2,473,910, June 21.

Rumsey, Herbert, Jr., Rochester, N. Y. Package. 2,474,120, June 21.

Rumsey, Herbert, Jr., Rochester, N. Y. Package. 2,474,166, June 21.

Rundell, Raymond R., Miami, Fla. Receptacle holder. 2,474,167, June 21.

Rupp, Earl V.: *See*—
Garrard, Howard F., and Rupp.

Rust, John B., Montclair, N. J., assignor to Montclair Research Corporation. Quaternary ammonium compounds and making same. 2,474,202, June 21.

Rutledge, John E., Normandy, Mo., assignor to Curtiss-Wright Corporation. Structural joint. 2,473,728, June 21.

Sacher, Murray H., Staten Island, N. Y., and C. J. Gentile, Waterbury, Conn. Cigarette or like holder and dispenser. 2,474,168, June 21.

Saco-Lowell Shops, assignee: *See*—
Gwaltney, Eugene C.

St. Pierre, Eugene, Pawtucket, assignor to Hemphill Company, Central Falls, R. I. Gap closer. 2,473,975, June 21.

Salz, Max, New York, N. Y. Color facsimile apparatus. 2,473,729, June 21.

Sammons, Herbert, Gerrards Cross, and C. L. Cowdrey, Markyate, assignors to D. Napier & Son Limited, London, England. Air intake system of internal-combustion engines. 2,474,068, June 21.

Samuel Stamping and Enameling Company, assignee: *See*—
Shelton, Roy.

Sanders, Arthur F., Penzance, England. Control of fuel-injection engines. 2,474,121, June 21.

Sanders, Eric, assignee: *See*—
Ransom, Jack.

Sands, Robert E., Philadelphia, Pa. Method of and apparatus for finishing garments. 2,473,823, June 21.

Sarra, Mario, New Britain, Conn. Lamp shade. 2,473,768, June 21.

Sarsfield, Norman F., Runcorn, England, assignor to Imperial Chemical Industries Limited. Production of fluorocarbons. 2,473,911, June 21.

Saya, John F., Powersite, Mo. Refrigerating means. 2,473,730, June 21.

Scalera, Mario: *See*—
Lecher, Hana Z., Scalera, Joyce, and Forster.

Schade, John, assignor to National Blank Book Company, Holyoke, Mass. Ring binder construction. 2,473,665, June 21.

Schelwer, Albert T., Erie, Pa. Coupling. 2,473,973, June 21.

Schinman, Carl E., Seattle, Wash. Support means for oil pipes and electrodes in oil burners. 2,473,769, June 21.

Schlesman, Carleton H., Camden, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Electronic curve plotting device. 2,474,192, June 21.

Schmidt, Robert C., assignor to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device. 2,473,547, June 21.

Schmitz, Carl E., assignor to Crane Packing Company, Chicago, Ill. Retainer for fluid seals. 2,474,123, June 21.

Schneck, Frederick W., Santa Monica, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind. Pilot valve. 2,474,122, June 21.

Schnick, Arthur W.: *See*—
Kroll, Alfred J., and Schnick.

Schuck, Oscar H., Belmont, Mass., assignor to the United States of America as represented by the Secretary of the Navy. Underwater sound detecting and indicating system. 2,473,974, June 21.

Schulman, James H., Cambridge, assignor to Sylvania Electric Products Inc., Salem, Mass. Calcium silicate phosphor. 2,474,198, June 21.

Schultz, Arthur B., Wilmington, Del., assignor to All American Airways, Inc. Parachute leader. 2,474,124, June 21.

Schultz, Arthur B., Wilmington, Del., assignor to All American Airways, Inc. Vehicle based arresting gear. 2,474,125, June 21.

Schutle and Koerting Company, assignee: *See*—
Boehm, Frederick.

Schwinn, Frank W., Chicago, Ill. Tire relief valve. 2,473,912, June 21.

Seagram, Joseph E., & Sons, Inc., assignee: *See*—
Block, Seymour S.

Seaman, Harry J., Milwaukee, Wis. Mixing. 2,473,770, June 21.

Seebold, James E., assignor to Standard Oil Company, Chicago, Ill. Catalytic conversion system. 2,474,014, June 21.

Selas Corporation of America, assignee: *See*—
Bennett, Clarence H.

Serval Slide Fasteners, Inc., assignee: *See*—
Voity, Maurice.

Shaff, Ernest H., Spring Lake, Mich., assignor to Cherry Rivet Company, Los Angeles, Calif. Apparatus for upsetting blind rivets having right angle bend in stem. 2,473,913, June 21.

Shapiro, Joseph, assignee: *See*—
Wixon, Paul E., and Chapman.

Shaw, Harold F., assignor to F. A. Whitney Carriage Company, Leominster, Mass. Latch for drop-side cribs. 2,473,914, June 21.

Shaw, Harry, Healy, Whitworth Rochdale, England. Instrument for the measurement of surface finishes. 2,474,015, June 21.

Shawinigan Resins Corporation, assignee: *See*—
Wilson, Wilfred K.

Sheaffer, W. A., Pen Company, assignee: *See*—
Colstad, Charles N.
Martin, Lynn P.
Olson, Wilbur K., and Martin.

Shell Development Company, assignee: *See*—
Kingston, Benson M., and McKinsey.
Maycock, Russel L.
Van den Bussche, Hendrik K. J.

Shelton, Roy, assignor to Samuel Stamping and Enameling Company, Chattanooga, Tenn. Metal radiant for gas heaters. 2,474,169, June 21.

Shepard, Stanley Y., Sr., Atherton, Calif. Iron holder. 2,473,731, June 21.

Shilling, Clark C., San Diego, Calif. Vehicle springing assembly. 2,473,732, June 21.

Shuman, Royal L., Newark, N. J., assignor to Celanese Corporation of America. Trialkyl phenyl phosphates from purified petroleum alkyl phenols. 2,473,612, June 21.

Shumway, Newell S., Phoenix, Ariz. Concrete mold. 2,473,824, June 21.

Shuron Optical Company, Inc., assignee: *See*—
Rohrbach, John J.

Silvera, Americo, assignor to Carrier Corporation, Syracuse, N. Y. Food freezing tunnel. 2,474,069, June 21.

Singer Manufacturing Company, The, assignee: *See*—
Trickey, Philip H.

Skellern, John: *See*—
Chamberlin, Reginald H. D., Wynne, and Skellern.

Slater, Edward G., Muskegon, Mich. Towel rack. 2,473,771, June 21.

Slepian, Joseph, Pittsburgh, and A. B. White, Edgewood, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Heating and welding system. 2,473,915, June 21.

Smith, Arthur E., Los Angeles, Calif. Syringe. 2,473,733, June 21.

Smith, Arthur E., Los Angeles, Calif. Hypodermic syringe. 2,473,734, June 21.

Smith, Charles G., Medford, assignor to Raytheon Manufacturing Company, Newton, Mass. Communication system. 2,473,612, June 21.

Smith, Charles G., Medford, assignor to Raytheon Manufacturing Company, Newton, Mass. Television receiver screen. 2,473,825, June 21.

Smith, Charles G., Medford, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrical discharge device. 2,473,826, June 21.

Smith, Edwin W.: *See*—
Topham, Laurence E., and Smith.

Smith, Ellis, and N. Crabtree, Bradford, S. Naylor, Wibsey, Bradford, and H. J. Maw, Guiseley, England. Air cleaner for carburetors. 2,474,017, June 21.

Smith, Grant W., Grand Forks, N. Dak., assignor to The B. F. Goodrich Company, New York, N. Y. Polymerization of vinylidene compounds in aqueous emulsion in the presence of ionizable silver compounds and ammonia. 2,473,548, June 21.

Smith, Grant W., Grand Forks, N. Dak., assignor to The B. F. Goodrich Company, New York, N. Y. Polymerizing vinylidene compounds in aqueous medium in the presence of silver ion and oxalate ion. 2,473,549, June 21.

Smith, James M., Jr.: *See*—
Kuh, Erwin, and Smith.

Smith, Sydney, Lawrenceville, N. J. Roller bearing assembly. 2,474,016, June 21.

Snook, Harry N.: *See*—
Harris, Fred E., Hegeman, Mitchell, and Snook.

Snyder, Eugene, Philadelphia, assignor to American Chemical Paint Company, Ambler, Pa. Method of and material for protecting and conditioning metal surfaces. 2,473,614, June 21.

Snyder, Frederick D., Milton, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Relay system. 2,473,916, June 21.

Sobel, Morris: *See*—
Hood, Arthur, Sobel, and Terhune.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Lechthaler, Charles H., Payne, and Valas.
Lee, Russell, and Ray.
Schlesman, Carleton H.

Sokolik, Edward, New Brighton, Minn. Swivel for electric cables. 2,474,070, June 21.

Solomon, William, London, England, assignor to Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y. Manufacture of complex organic antimony compounds. 2,473,735, June 21.

Sowter, Percy F. C., Spondon, near Derby, England, assignor, by mesne assignments, to Celanese Corporation of America. Stretching cellulose acetate filaments. 2,473,615, June 21.

Sparrow, Hubert T., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Supercharger compression temperature control system. 2,474,018, June 21.

Sparrow, Hubert T., Minneapolis, Minn., and A. E. Baak, Los Angeles, Calif., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control apparatus. 2,474,203, June 21.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Directly heated cathode. 2,473,550, June 21.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Electronic discharge device of the cavity resonator type. 2,473,827, June 21.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device of the magnetron type. 2,473,828, June 21.

Spencer, Thomas F.: *See*—
Jackson, Herman F., and Spencer.

Sperry Corporation, The, assignee: *See*—
Fragola, Caesar F., and Craddock.
Maeder, Abbott S.

Sprague Specialties Company, assignee: *See*—
Brooks, Lester A.

Standard Oil Company, The, assignee: *See*—
Harris, Robert L.
Seebold, James E.

Stanley, Henry M., Bubl, Minn. Wallpaper trimmer. 2,473,551, June 21.

Staw, Morris, Forest Hills, Long Island, N. Y. Device for heat sealing seams. 2,473,552, June 21.

Steffensen, Einar V.: *See*—
Dunham, Le Roy S., and Steffensen.

Steiner, Arnold B., La Jolla, and L. B. Rothe, assignors to Kelco Company, San Diego, Calif. Stabilizer for icings. 2,474,019, June 21.

Steinert, Emil F., Williamsville, and C. H. Jennings, Buffalo, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Alternating current arc welding system. 2,473,917, June 21.

Stephenson, Basil, Weybridge, assignor to Vickers-Armstrongs Limited, London, England. Elliptical boundary frame for openings in pressure cabins for aircraft. 2,473,610, June 21.

Stern, Nathan Sally, New York, N. Y. Microfilm reader and projecting apparatus. 2,473,736, June 21.

Stetson, Allyn E., Chicago, Ill. Power sprinkler. 2,474,071, June 21.

Stevens, Roy R., Forest Hills, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Multivalve control station for servomotors. 2,473,695, June 21.

Stewart-Warner Corporation, assignee: *See*—
Tramontini, Vernon N.

Stiefel, Karl J., Waltham, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrical control system. 2,473,617, June 21.

Stillwagon, George B., Jr., assignor of one-half to K. G. Fraser, Dayton, Ohio. Universal joint. 2,473,618, June 21.

Stokes, Arthur J., Washington, D. C. Method of and apparatus for measuring the film strength of liquids. 2,473,553, June 21.

Stolberg, Sven A., Chicago, Ill., assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass. Repeat device for automatic phonographs. 2,473,829, June 21.

Stoltz, Glenn E., Pittsburgh, and J. R. Erbe, Mount Lebanon, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system for electrolytic processes. 2,473,918, June 21.

Stone, Melvin L., East Cleveland, Ohio, assignor to General Electric Company. Method and apparatus for assembling incandescent lamp mounts. 2,473,919, June 21.

Stoner, George H., Seattle, Wash., assignor to Boeing Airplane Company. Air bearing gyroscope. 2,474,072, June 21.

Storment, Joseph E., Bartlesville, Okla., assignor to Phillips Petroleum Company. Level control in packed towers. 2,473,737, June 21.

Streicher, Edwin G., assignee: *See*—
Cumming, Reginald I.

Stuart, Clarence C., assignor to Traffic Transport Engineering, Inc., Dearborn, Mich. Motorcar carrier. 2,473,830, June 21.

Stuart, G. A., assignee: *See*—
Bruen, George C.

Stutsman, Paul W., Needham, assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass. Glow tube rectifier. 2,473,831, June 21.

Stutsman, Paul W., Needham, assignor, by mesne assignments, to Raytheon Manufacturing Company, Newton, Mass. Electrical system. 2,473,832, June 21.

Stutsman, Paul W., Needham, assignor to Raytheon Manufacturing Company, Newton, Mass. Gaseous discharge device. 2,473,833, June 21.

Submarine Signal Company, assignee: *See*—
Beechlyn, John T.
Benioff, Hugo.
Turner, Edwin E., Jr.

Sulzbacher, Max, assignor to Butacet Limited, London, England. Separation of acetone and butyl alcohol from fermented mash by activated charcoal. 2,474,170, June 21.

Sundt, Edward V., Chicago, Ill., assignor to Littelfuse, Incorporated. High-voltage tester and indicator. 2,474,073, June 21.

Sunstein, David E., Elkins Park, Pa., assignor to Philco Corporation. Apparatus for continuously predicting trends in observed data. 2,474,074, June 21.

Superior Steel Corporation, assignee: *See*—
Keene, Walter L.

Sutherland Paper Company, assignee: *See*—
Buttery, Kenneth T.

Swanson, Ziegner, De Kalb, Ill. Slicethickness gauge for slicers. 2,474,171, June 21.

Swiss firm of Ciba Limited, The, assignee: *See*—
Hunziker, Hermann, and Bommer.

Sylvania Electric Products Inc., assignee: *See*—
Goodwin, Vernon D.
Schulman, James H.

Talley, Hyrum M., Alhambra, Calif. Welding apparatus. 2,474,075, June 21.

Talobre, André, Oyonnax, France. Spectacles with interchangeable lenses. 2,473,619, June 21.

Tata, Domenic P.: *See*—
King, Etta E., and Tata.

Taylor, Guy B., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Fractionation of linear polyamides and products obtained thereby. 2,473,020, June 21.

Taylor, Joseph E., Philadelphia, Pa. Electric locking device. 2,473,664, June 21.

Teague, Walter D., Jr., Alpine, assignor to Bendix Aviation Corporation, Teterboro, N. J. Valve. 2,473,620, June 21.

Telomatic Products, Inc., assignee: *See*—
Lackoff, Samuel K.

Terhune, Edgar A.: *See*—
Hood, Arthur, Sobel, and Terhune.

Thatcher, Thomas J., Huntington Station, N. Y. Variable capacity vane pump. 2,473,921, June 21.

Thierfelder, Emil F., Ilion, assignor to Remington Rand Inc., Buffalo, N. Y. Recording and computing machine. 2,473,738, June 21.

Thoenen, Marie, assignee: *See*—
Bruen, George C.

Thompson, Claude H., Binghamton, N. Y. Dispensing container. 2,474,076, June 21.

Thompson, Grinder Company, The, assignee: *See*—
Wilson, John C.

Thorsen, E. M., assignee: *See*—
Bruen, George C.

Thurston, Jack T., Cos Cob, Conn., assignor to American Cyanamid Company, New York, N. Y. N-heterocyclic substituted guanamines. 2,474,194, June 21.

Tice, Wayne E.: *See*—
Weyenberg, Henry, and Tice.

Tidwell, Wendell B., assignor to Window-Frame Corporation, Norfolk, Va. Reversible window construction. 2,474,126, June 21.

Timm, John C., Girard, Ohio. Metallic structural element. 2,473,976, June 21.

Tinnerman, George A., assignor to Tinnerman Products, Inc., Cleveland, Ohio. Fastening device. 2,475,172, June 21.

Tinnerman Products, Inc., assignee: *See*—
Tinnerman, George A.

Toastswell Company, Incorporated, The, assignee: *See*—
McCullough, Paul J.

Tobias, Cornelius A., Berkeley, Calif. Breathing indicator. 2,473,922, June 21.

Tollison, Paul L., North Plainfield, and C. L. Richards, South Plainfield, assignors to Wood Newspaper Machinery Corporation, Plainfield, N. J. Clamping apparatus for tension locked printing plates. 2,474,127, June 21.

Tonnelier, John E., New York, N. Y. Cable lubricator. 2,474,128, June 21.

Topham, Laurence E., Wenham, and E. W. Smith, Beverly, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Rounding machine. 2,473,621, June 21.

Townsitor Corporation, assignee: *See*—
Musgrave, Herman C.

Traffic Transport Engineering, Inc., assignee: *See*—
Stuart, Clarence C.

Tramontini, Vernon N., Indianapolis, Ind., assignor to Stewart-Warner Corporation, Chicago, Ill. Welding apparatus. 2,474,129, June 21.

Trevor, Bertram: *See*—
Atwood, John B., and Trevor.

Trickey, Philip H., North Plainfield, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Dual-voltage dual speed capacitor motor. 2,474,195, June 21.

Trinko, Victoria, Downers Grove, Ill. Complete cigarette case. 2,474,173, June 21.

Troy Sunshade Company, The, assignee: *See*—
Richardson, Harry C.

Trumpler, William E., Olean, assignor to Carrier Corporation, Syracuse, N. Y. Compressor with interchangeable stage elements. 2,474,077, June 21.

Trunwell, Harry, St. John, New Brunswick, Canada. Tying device. 2,473,622, June 21.

Tucker, Warren R., Dayton, Ohio, assignor to H-P-M Development Corporation, Wilmington, Del. Hydraulic control system for variable delivery pumps. 2,474,174, June 21.

Tuller, William G., Watertown, assignor to Raytheon Manufacturing Company, Newton, Mass. Coupling between transmitter and wave guide system. 2,473,834, June 21.

Tully, John P., Bellerose, assignor to The Great Atlantic & Pacific Tea Company, New York, N. Y. Produce counter. 2,474,130, June 21.

Turner, Dennis R., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrolytic polishing process. 2,473,923, June 21.

Turner, Edwin E., Jr., West Roxbury, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Interchange of electrical and acoustical energy. 2,473,835, June 21.

Tut, Inc., assignee: *See*—
Tutton, Gordon N.

Tutton, Gordon N., assignor to Tut, Inc., Auburn, N. Y. Enclosing case for fishing rods and the like. 2,473,977, June 21.

Twin Coach Company, assignee: *See*—
Austin, Dwight E., and Fageol.

United-Carr Fastener Corporation, assignee: *See*—
Loeser, George H., and Gangle.

United Shoe Machinery Corporation, assignee: *See*—
Lancaster, John T.
Topham, Laurence E., and Smith.

United States Atomic Energy Commission, United States of America as represented by the, assignee: *See*—
Egle, Edward J., Jr.

United States Steel Corporation of Delaware, assignee: *See*—
Hammerstrom, Karl R.

Universal Wire Spring Company, The, assignee: *See*—
Neely, William H.

Urist, Harold: *See*—
Martin, Gustav J., and Urist.

Valas, Peter D.: *See*—
Lechthaler, Charles H., Payne, and Valas.

Valentine, Carroll E.: *See*—
Harder, Edwin L., and Valentine.

Van Buskirk, Ernest M., East Moline, Ill., assignor to International Harvester Company. Center divider for tractor-mounted harvesters. 2,473,978, June 21.

Van den Bussche, Hendrik K. J., Delft, Netherlands, assignor to Shell Development Company, San Francisco, Calif. Liquid fuel burner with rotateble atomising cup. 2,474,020, June 21.

Vang, Alfred, New York, N. Y. Electric stored energy resistance welding system. 2,473,772, June 21.

Van Nort, William W. K., Cabin John, Md. Propeller. 2,473,665, June 21.

Van Sickle, Roswell C.: *See*—
Baker, Benjamin P., Van Sickle, and Cumming.

Vendo Company, The, assignee: *See*—
Johnson, Elmer C., and Hagstrom.

Verderber, Joseph, and R. H. Lieka, Cleveland, Ohio. Lawn mower. 2,474,131, June 21.

Vernet, Sergius, Yellow Springs, Ohio. Piston sealing means. 2,474,132, June 21.

Verstynen, Joseph C.: *See*—
Hallberg, Elmer E., and Verstynen.

Vickers-Armstrongs Limited, assignee: *See*—
Stephenson, Basil.

Viehweger, August, Comstock Park, assignor to Grand Rapids Hardware Company, Grand Rapids, Mich. Sash balance. 2,473,666, June 21.

Vining, William H., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of metal compounds. 2,474,021, June 21.

Volty, Maurice, New York, N. Y., assignor to Serval Slide Fasteners, Inc. Apparatus for manufacturing slide fasteners. 2,473,623, June 21.

Von Segebaden, Ernst, Drottningholm, assignor to Arenco Aktiebolag, Stockholm, Sweden. Supporting observers in range-finder systems. 2,474,133, June 21.

Wade, Stanley M., Benicia, Calif. Combined collar holder and tie supporter. 2,473,739, June 21.

Waldman, Harry, assignee: *See*—
Wilson, Christopher R.

Walker, Isaac F., Hockessin, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Synthetic linear polyamides and retarding crystallization of said polyamides. 2,473,924, June 21.

Wallace & Tiernan Co. Inc., assignee: *See*—
Booth, George M.

Waller, Coy W., Pearl River, assignor to American Cyanamid Company, New York, N. Y. Purifying pteroylglutamic acid. 2,474,022, June 21.

Walton, George M., Shaker Heights, assignor to Air-Maze Corporation, Cleveland, Ohio. Liquid filter element. 2,473,979, June 21.

War, United States of America as represented by Secretary of, assignee: *See*—
Weiss, Saul.

Warner, Alden Y., Farmington, and W. J. Craven, East Hartford, assignors to The Capewell Manufacturing Company, Hartford, Conn. Quick-release connector for straps and the like. 2,473,554, June 21.

Warner, Michael M., Chicago, Ill. Spray gun. 2,473,667, June 21.

Waterson, Arthur P., Tulsa, Okla., assignor to The R. K. LeBlond Machine Tool Company, Cincinnati, Ohio. Hydraulic tool control unit. 2,474,134, June 21.

Webster, Benjamin C., Fairfield, assignor to The Bryant Electric Company, Bridgeport, Conn. Lamp holder for double-ended discharge lamps. 2,473,925, June 21.

Weiss, George A., assignee: *See*—
Cumming, Reginald I.

Weiss, Saul, Washington, D. C., assignor to the United States of America as represented by the Secretary of War. Breech-loading mortar with obturator case. 2,473,555, June 21.

Weissmann, Charles, assignor to Polymerisable Products Limited, London, England. Carrying out condensation reactions. 2,474,175, June 21.

Welch, Edward, Valley Falls, R. I. Waterproof garment. 2,473,740, June 21.

Welsh, Oral, assignor to Brown Fintube Company, Elyria, Ohio. Electric resistance welding method. 2,473,668, June 21.

Welty, Albert B., Moline, Ill., assignor to International Harvester Company. Moisture tester for controlling recirculation of material in drying apparatus. 2,474,204, June 21.

Welty, Albert B., Moline, Ill., assignor to International Harvester Company. Pneumatic grain elevator. 2,474,206, June 21.

Wenck, Claude E., Rockford, Ill. Hook and line holder. 2,474,176, June 21.

Wesley, Homer C., Sr., Louisville, Ky. Device for softening beards. 2,473,926, June 21.

West, Harry D., Bay City, assignor of one-half to E. Kushman, Saginaw, Mich. Toothbrush. 2,473,773, June 21.

West, Howard K.: *See*—
Berger, Emil J., and West.

Western Electric Company, Incorporated, assignee: *See*—
Harris, Fred E., Hegeman, Jr., Mitchell, and Snook.
Padowicz, Henry N.

Westinghouse Air Brake Company, The, assignee: *See*—
Hines, Claude M.
Kershaw, Norman G.
Stevens, Roy R.

Westinghouse Electric Corporation, assignee: *See*—
Aldrich, Donald F.
Altfather, Conrad T.
Askey, John S.
Baker, Benjamin P., and Harker.
Baker, Benjamin P., Van Sickle, and Cumming.
Barnun, Herman F.
Baudry, Rene A., and Heller.
Baxter, Harold G.
Beck, Edward F. W.
Becker, Maximilian C.
Boykin, John R.
Bradley, Schuyler L.
Chubbuck, Leonard B.
Claybourn, Glen L.
Hagopian, Richard H.
Harder, Edwin L., and Valentine.
Hein, Carl C.
Hoop, John G.
Hull, Frederick C.
Jennings, Charles H., and Gamber.
Krapf, Herman C.
Ludwig, Leon R., and Baker.
Lyle, Frederick W.
Lynn, Clarence.
Mikina, Stanley J.
Okrent, Ernest C., and Laidig.
Pierce, Lawrence.
Purifoy, George R.
Ridgely, Neville R., Jr., and Coleman.
Slepian, Joseph, and White.
Snyder, Frederick D.
Steinert, Emil F., and Jennings.
Stoltz, Glenn E., and Erbe.
Turner, Dennie R.
White, Alfred B.
Weyenberg, Henry, and W. E. Tice, assignors to Holland Furnace Company, Holland, Mich. Incinerator. 2,473,624, June 21.
Wheeler, Benjamin F., Haddonfield, N. J., assignor to Radio Corporation of America. Motion-picture continuous film editing system. 2,473,625, June 21.
Whitcomb, Gordon P.: *See*—
Kienle, Roy H., and Whitcomb.
White, Alfred B.: *See*—
Slepian, Joseph, and White.
White, Alfred B., Murrysville, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Apparatus for and method of percussive welding. 2,473,927, June 21.
White, Alfred B., Murrysville, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Arc welding system. 2,473,928, June 21.
White, George H., Hartford, Conn., assignor to The Gray Manufacturing Company. Adjustable earpiece support. 2,474,135, June 21.
White, Gerald E., assignor to White Products Corporation, Middleville, Mich. Tank port and coupling. 2,473,669, June 21.
White, Harvey L., Springfield, Ohio. Magnet for electric bulbs. 2,473,623, June 21.
White Products Corporation, assignee: *See*—
White, Gerald E.
Whitney, F. A., Carriage Company, assignee: *See*—
Shaw, Harold F.
Wickizer, Gilbert S., and E. N. Brown, Riverhead, N. Y., assignors to Radio Corporation of America. Thermocouple with radiating fins. 2,473,627, June 21.
Wilcox, Earl, Jr., Grand Junction, Colo. Adjustable hitch clamp. 2,474,078, June 21.
Wild, Rudolf F., Philadelphia, Pa., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Cathode-ray indicator. 2,474,177, June 21.
Wilder, Warren, and H. Horlacher, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio. Pattern controlled milling machine. 2,473,741, June 21.
Wiley, Carl A., Xenia, Ohio. Device for controlling oscillating circuits. 2,473,556, June 21.
Willner, Hugo, Vancouver, British Columbia, Canada. Guitar. 2,473,980, June 21.
Wilson, Arthur D., Grays, and W. Dalziel, Birkenhead, England, assignors to Lever Brothers Company. Packing of plastic material. 2,474,136, June 21.
Wilson, Christopher R., assignor of one-half to H. Waldman, Philadelphia, Pa. Rotating wing for aircraft. 2,474,079, June 21.
Wilson, John C., assignor to The Thompson Grinder Company, Springfield, Ohio. Grinding machine. 2,473,670, June 21.
Wilson, Wilfred K., assignor to Shawinigan Resins Corporation, Springfield, Mass. Polymerization process. 2,473,929, June 21.
Window-Frame Corporation, assignee: *See*—
Tidwell, Wendell B.
Winninghoff, Wilford J.: *See*—
Found, Clifton G., and Winninghoff.
Witte, George W., Philadelphia, Pa. Holder for collapsible tubes. 2,474,080, June 21.
Wixon, Paul E., and C. E. Chapman, Baltimore, Md., assignors to J. Shapiro. Paper cup beader. 2,473,836, June 21.
Wolf, Frank J., Westfield, assignor to Merck & Co., Inc., Rahway, N. J. 2- and 4-sulfanilamido quinazoline. 2,473,931, June 21.
Wolf, Gaylord E., Pittsburgh, Pa. Package for dispensing interfolded sheets. 2,473,932, June 21.
Wolf, Menno, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Deflection circuit. 2,473,983, June 21.
Wolf, Morris D., Chicago, Ill. One-person seesaw. 2,474,081, June 21.
Wood, Francis G., East Detroit, Mich. Illuminated radio antenna. 2,473,981, June 21.
Wood, Frederic E., Oak Park, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Electromagnetic relay. 2,473,982, June 21.
Wood Newspaper Machinery Corporation, assignee: *See*—
Tollison, Paul L., and Ricards.
Woodruff, Morgan L., Waban, Mass. Davit. 2,473,557, June 21.
Woodward, Eric R., New York, N. Y., assignor to Mathieson Chemical Corporation. Bleaching glyceridic esters. 2,473,930, June 21.
Wuensch, Charles E., Saratoga, Calif. Centrifugal ball mill. 2,473,558, June 21.
Wunder, Franz, St. Louis County, assignor to All-Die, Inc., St. Louis, Mo. Die and die set for shoe parts and the like. 2,473,837, June 21.
Wurzburger, Paul D., Cleveland Heights, Ohio. Pipe coupling. 2,474,178, June 21.
Wutz, John, Chicago, Ill. Skate. 2,474,082, June 21.
Wyandotte Chemicals Corporation, assignee: *See*—
Jillson, Lyman W.
Wyer, Richard F., Rexford, N. Y., assignor to General Electric Company. Gas-shielded alternating current arc welding. 2,474,023, June 21.
Wynne, Charles H. L.: *See*—
Chamberlin, Reginald H. D., Wynne, and Skellern.
Yackley, William J., Peoria, Ill. Crutch. 2,473,671, June 21.
Young, Kenneth A., Waban, assignor to Raytheon Manufacturing Company, Newton, Mass. Coupling system for wave guides. 2,474,137, June 21.
Zakel, Paul, Stockton, Calif. Load ejecting mechanism for carrying scrapers. 2,473,774, June 21.
Zenith Radio Corporation, assignee: *See*—
Kalmus, Henry P.
Zielinski, Joseph, Brooklyn, N. Y. Sprayer nozzle. 2,473,933, June 21.
Ziliotto, Giovanni C., Lake Orion, Mich. Dust collector. 2,473,672, June 21.
Zimmermann, Lukas, Birmingham, Mich. Work rest and forming the same. 2,474,138, June 21.
Zimmerman, Merritt A., assignor to Associated Laboratories, Inc., Cleveland, Ohio. Auxiliary charging device for internal-combustion engines. 2,474,083, June 21.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 21ST DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Air compressor. C. D. MacCracken. Re. 23,126, June 21.
Cursor, Slide rule. J. J. Smidl. Re. 23,127, June 21.
Hearing aid, Bone conduction. H. Koch. Re. 23,125, June 21.
N-dimethylethanolamine, Preparation of. W. F. Gresham. Re. 23,124, June 21.
Vinyl chloride, Production of. J. F. Weller. Re. 23,128, June 21.

LIST OF DESIGN INVENTIONS

Ash tray and saucer, Combined. O. C. Tweet. 154,224, June 21.
Bag or similar article, Clothespin. P. Gold. 154,200, June 21.
Bagging machine. P. L. Snyder and C. Miller. 154,219, June 21.
Beater, Liquid. J. O. Hutton. 154,202, June 21.
Bowl, Mixing. H. H. Varney. 154,225, June 21.
Brooch or similar article. A. Philippe. 154,214, June 21.
Cabinet or the like, Clothes and shoe. A. P. Finkelstein. 154,199, June 21.
Cap, Container. A. H. Jung. 154,204, June 21.
Chest or similar article, Cake. M. S. Dumke. 154,197, June 21.
Coaster. T. A. Steede and R. C. Prsil. 154,220, June 21.
Comb, Ring. S. Kovacs and D. J. Fulkerson. 154,205, June 21.
Cup, Dinner. H. A. Roberts. 154,217, June 21.
Decanter. J. H. Clark and H. Richards. 154,196, June 21.
Dish, Paper. J. D. Reifsnyder. 154,216, June 21.
Display rack, Merchandise. E. F. Todd. 154,223, June 21.
Doll. E. L. Adams. 154,194, June 21.
Dress. S. J. Goldfarb. 154,201, June 21.
Duplicating machine. R. W. Quirk. 154,215, June 21.
Earring or similar article. A. Philippe. 154,211–13, June 21.
Garment, Feet equipped outer. E. E. Tanner, Jr. 154,222, June 21.
Griddle and skillet, Combination. A. Beck. 154,195, June 21.
Hanger, Clothes. F. B. Kraus. 154,206–7, June 21.
Key chain and watch, Combined extension. N. N. Okun. 154,210, June 21.
Shower fixture. W. H. Melrink. 154,209, June 21.
Spectacle temple. R. F. E. Stegeman. 154,221, June 21.
Stool and control for dental chairs, Combined operator's. C. W. Johnson and J. T. Clark. 154,203, June 21.
Textile fabric. L. MacGregor. 154,208, June 21.
Toothbrush and toothpaste holder or similar article, Combined. H. R. Sigler and C. A. Layatrom. 154,218, June 21.
Vending machine, Popcorn. F. P. Emerson. 154,198, June 21.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 21st DAY OF JUNE, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Adjustable earpiece support. G. H. White. 2,474,135, June 21.
Adjustable hitch clamp. E. Wilcox, Jr. 2,474,078, June 21.
Adjusting device for pipe wrenches, Jaw. R. A. Conn. 2,473,787, June 21.
Air filter. A. H. Bahnson, Jr. 2,473,501, June 21.
Air intake system of internal-combustion engines. H. Sammons and C. L. Cowdrey. 2,474,068, June 21.
Alarm, Display. B. Needlman. 2,474,157, June 21.
Alcohol, Unsaturated heterocyclic. N. M. Bortnick. 2,473,497, June 21.
Alkaline primary cell. S. Ruben. 2,473,546, June 21.
Alloy: *See*—
Brazing alloy.
Alternating current pulser circuit. H. Klemperer. 2,473,592, June 21.
Ammonia salts of maleic acid, Production of. B. G. Carson. 2,474,089, June 21.
Anthraquinone-C-arylthiazoles, Manufacturing. M. H. Fleysher. 2,473,872, June 21.
Anthrimide-carbazole dyestuffs. H. Hauser and M. Bommer. 2,473,949, June 21.
Apparatus for and method of percussive welding. A. B. White. 2,473,927, June 21.
Apparatus for casting dental restorations. I. Hordes. 2,474,105, June 21.
Apparatus for continuously predicting trends in observed data. D. E. Sunstein. 2,474,074, June 21.
Apparatus for cutting curved plates used in spherical tanks. K. B. Hume. 2,474,149, June 21.
Apparatus for cutting tubes. J. L. Anderson. 2,473,559, June 21.
Apparatus for forming wooden spoons from blanks. S. F. Montague. 2,473,720, June 21.
Apparatus for insertion in color display devices utilizing polarized light for securing changing saturation of specific hues in fixed zones as viewed by observers. F. Burchell. 2,473,857, June 21.
Apparatus for manufacturing slide fasteners. M. Voity 2,473,623, June 21.
Apparatus for measuring differential speed. G. H. Rendel. 2,474,116, June 21.
Apparatus for metering the fuel supplied to prime movers. R. H. D. Chamberlin, C. H. L. Wynne, and J. Skellern. 2,474,033, June 21.
Apparatus for scribing circles on cylindrical members. C. A. Dimmock, Jr. 2,474,041, June 21.
Apperatus for testing the accuracy of movements. C. Berkley. 2,473,700, June 21.
Apparatus for the manufacture of studs. A. J. Randolph. 2,473,543, June 21.
Apparatus for upsetting blind rivets having right angle bend in stem. E. H. Shaff. 2,473,913, June 21.
Arc welding, Electric. H. Edels. 2,473,871, June 21.
Arc welding, Gas shielded direct-current. R. R. Lobosco. 2,473,601, June 21.
Arc welding system. A. B. White. 2,473,928, June 21.
Arc welding system, Alternating current. E. F. Steinert and C. H. Jennings. 2,473,917, June 21.
Armrest. H. H. Harris. 2,474,050, June 21.
Arrester, Lightning. E. F. W. Beck. 2,473,849, June 21.
Arrester, Lightning. E. F. W. Beck and J. S. Ferguson. 2,473,850, June 21.
Assembly for upholstery, Spring. W. W. Gleason. 2,473,706, June 21.
Assembly, Necktie and holder. K. A. Lambrechts. 2,473,593, June 21.
Assembly, Vehicle springing. C. C. Shilling. 2,473,732, June 21.
Atmosphere production. J. G. Hoop. 2,473,525, June 21.
Attachment for wagons, Holder. D. N. Mathey. 2,473,763, June 21.
Awning, Structural metal. L. H. Overly. 2,474,011, June 21.
Axially expansible rotary cutter. D. G. Horr. 2,473,952, June 21.
Baby high chair. B. Felsher. 2,473,991, June 21.
Backstop for electromagnetic devices. M. C. Becker. 2,473,851, June 21.
Bag holder. G. Aspinall. 2,474,025, June 21.
Bait box. J. C. Ganong. 2,473,874, June 21.
Balance, Sash. A. Viehweger. 2,473,666, June 21.
Bar for veneer lathes, Roller pressure. W. J. Miller. 2,473,541, June 21.
Barometer. F. Rieber. 2,473,610, June 21.
Beader, Paper cup. P. E. Wixon and C. E. Chapman. 2,473,836, June 21.
Bearing assembly, Roller. S. Smith. 2,474,016, June 21.
Bearing bracket. M. I. Levy. 2,474,151, June 21.
Belt grader, Endless. B. W. Hatch. 2,474,051, June 21.
Belting. S. P. Parker. 2,473,607, June 21.
Biguanide derivatives. F. H. S. Curd and F. L. Rose. 2,473,980, June 21.
Billet and manufacture thereof, Composite. W. L. Keene. 2,473,686, June 21.
Binder construction, Ring. J. Schade. 2,473,663, June 21.
Bleaching poplar groundwood. K. A. Craig. 2,474,034, June 21.
Block: *See*—
Sanding block.
Boat cover. F. D. Burns. 2,474,031, June 21.
Box: *See*—
Bait box.
Combined photograph album and music box.
Bracket: *See*—
Bearing bracket.
Brazing alloy. F. C. Hull. 2,473,886, June 21.
Breaker, Circuit. H. G. Baxter. 2,473,848, June 21.
Breaking up the charge in electric smelting furnaces. G. M. Hansen. 2,473,681, June 21.
Breathing indicator. C. A. Tobias. 2,473,922, June 21.
Breech-loading mortar with obturator case. S. Weiss. 2,473,555, June 21.
Broiler. L. D. Milligan. 2,473,658, June 21.
Brush, Electrical motor and dynamo. T. Miller. 2,473,540, June 21.
Buff, Goblet. E. F. Doyle. 2,473,869, June 21.
Burner: *See*—
Tray type liquid fuel burner.
Burner with rotatable atomizing cup, Liquid fuel. H. K. J. van den Buesche. 2,474,020, June 21.
Cabin altitude and oxygen use indicator. N. F. Hosford. 2,473,586, June 21.
Cabinet and exercising device. J. N. Mosher. 2,474,060, June 21.
Cabinet having top opening with pedal operated closure, Kitchen. H. A. and H. C. Frothingham. 2,474,101, June 21.
Cable: *See*—
Self-supporting aerial electric conducting cable.
Cable lubricator. J. E. Tonneller. 2,474,128, June 21.
Cadmium, Recovering. F. G. McCutcheon. 2,473,962, June 21.
Calcium silicate phosphor. J. H. Schulman. 2,474,193, June 21.
Can remover, Pry off type jar. N. Eastman. 2,473,870, June 21.
Car body, Double truck mine. K. R. Hammerstrom. 2,473,946, June 21.
Carbon bisulfide and hydrogen sulfide, Production of. L. Preisman. 2,474,067, June 21.
Carbonic acid amides of certain substituted glyoxalidines. M. De Groote and B. Keiser. 2,473,577, June 21.
Carrier: *See*—
Motorcar carrier. Wheeled carrier.
Carrying out condensation reactions. C. Weizmann. 2,474,175, June 21.
Carton for radio tubes and the like. V. D. Goodwin. 2,473,582, June 21.
Case: *See*—
Complete cigarette case. Stabilized brief case.
Case for fishing rods and the like, Enclosing. G. N. Tutton. 2,473,977, June 21.
Cathode, Directly heated. P. L. Spencer. 2,473,550, June 21.
Cathode-ray indicator. R. F. Wild. 2,474,177, June 21.
Centrifugal ball mill. C. E. Wuensch. 2,473,558, June 21.
Centrifugal switch. J. T. Janette. 2,473,998, June 21.
Chair: *See*—
Baby high chair.
Chair. A. Di Renzo. 2,473,745, June 21.
Chair. P. Mednick. 2,473,893, June 21.
Change of direction rollers. R. A. Liebel. 2,473,599, June 21.
Charging device for internal-combustion engines, Auxiliary. M. A. Zimmerman. 2,474,083, June 21.
Chart holder. R. C. Dehmel. 2,474,097, June 21.
Chuck, Independent leverage. W. A. Ashton. 2,473,935, June 21.
Chute, Flexible ammunition. H. B. Lewis and G. M. Larson. 2,473,716, June 21.

Circuit: *See*—
Alternating current pulser Deflection circuit.
circuit.
Circuit for intercommunication systems, Thermionic vacuum tube. S. J. Klapman. 2,473,652, June 21.
Circuit interrupter, Push button operated. L. Pierce. 2,473,901, June 21.
Circuit to avoid distortion, Oscillograph. M. Maron. 2,473,718, June 21.
Circuits, Electrical. D. P. Faulk. 2,473,640, June 21.
Circuits, Pulse integrating. J. R Day 2,474,040, June 21.
Circuits with double control, Amplifier. J. L. H. Jonker and P. H. J. A. Kleynen. 2,473,754, June 21.
Clamp: *See*—
Adjustable hitch clamp.
Clamp. A. J. Park. 2,473,764, June 21.
Clamping apparatus for tension locked printing plates. P. L. Tollison and C. L. Ricards. 2,474,127, June 21.
Clamping ring. G. E. Murphy. 2,474,062, June 21.
Cleaner for carburetors, Air. E. Smith, N. Crabtree, S. Naylor, and H. J. Maw. 2,474,017, June 21.
Cleaning composition, Acid. F. N. Alquist and C. W. Hopkins. 2,474,170, June 21.
Cleaning device, Diaper. G. L. Berry. 2,473,852, June 21.
Cleaning metal catalysts with alcoholic caustic solution. M. H. Gwynn. 2,473,880, June 21.

Clip for writing instruments. L. P. Martin. 2,473,688, June 21.
Clip for writing instruments. W. K. Olson and L. P. Martin. 2,473,690, June 21.
Closer, Gap. E. St. Pierre. 2,473,975, June 21.
Coating of magnesium, Anodic. H. K. De Long. 2,474,181, June 21.
Coating process, Electrode. R. Penon and P. Lamaigre-Voreaux. 2,473,900, June 21.
Coating work with an electron-emissive material to improve inert gas-shielded refractory-electrode alternating current arc welding. R. R. Lobosco. 2,473,600, June 21.
Code teacher, Telegraphic. H. M. Herman. 2,473,749, June 21.
Coil, Dynamoelectric machine field. J. S. Askey. 2,473,842, June 21.
Coking high volatile coal involving incorporation therein of a limited amount of blast furnace flue dust. G. E. Brandon. 2,473,987, June 21.
Collar holder and tie supporter, Combined. S. M. Wade. 2,473,739, June 21.
Collar stiffener. L. D. McNeill. 2,474,058, June 21.
Combination comb and toilet article holder. C. T. La Mont. 2,473,594, June 21.
Combination sink and dining table. J. D. Clawsey. 2,473,862, June 21.
Combined photograph album and music box. A. H. and P. F. Cannizzaro. 2,473,038, June 21.
Communication system. C. G. Smith. 2,473,613, June 21.
Compass system, Gyro flux valve. C. F. Fragola and R. V. Craddock. 2,473,516, June 21.
Complete cigarette case. V. Trinko. 2,474,173, June 21.
Complex organic antimony compounds, Manufacture of. W. Solomon. 2,473,735, June 21.
Composite metal. E. H. Davignon. 2,474,038, June 21.
Composite metal having a nickel-plated beryllium-copper base and gold or silver bonded thereto by a copper-plated iron sheet, Forming. E. H. Davignon. 2,474,039, June 21.
Composition for and method of electrodeposition of lead. A. W. Liger. 2,474,092, June 21.
Compounds, Preserving alkyl metal. G. F. Ruddles. 2,473,972, June 21.
Compounds, Production of metal. W. H. Vining. 2,474,021, June 21.
Compressor with interchangeable stage element. W. E. Trumpler. 2,474,077, June 21.
Concrete mold. N. S. Shumway. 2,473,824, June 21.
Conductor, Electrical. L. A. Brooks. 2,473,985, June 21.
Connector for straps and the like, Quick-release. A. Y. Warner and W. J. Craven. 2,473,554, June 21.
Constant-speed electric motor. C. T. Altfather. 2,473,839, June 21.
Contact device, Mercury. C. E. Pollard, Jr. 2,473,693, June 21.
Contact means. C. C. Hein. 2,473,884, June 21.
Contacting gases and moving particle form solids. C. H. Lechthaler, J. W. Payne, and P. D. Valas. 2,474,199, June 21.
Contactor for fluids, Rotary. R. L. Maycock. 2,474,006, June 21.
Contactor for movable shafts, Electrical. R. W. George. 2,473,705, June 21.
Container: *See*—
Dispensing container.
Container closing apparatus. E. Henschen and S. W. Dennis. 2,473,523, June 21.
Control apparatus. H. F. Barsun. 2,473,845, June 21.
Control apparatus. H. T. Sparrow and A. E. Baak. 2,474,203, June 21.
Control apparatus, Pressure. A. E. Baak. 2,473,776, June 21.
Control circuits, Automatic frequency. M. G. Crosby. 2,473,790, June 21.
Control for internal-combustion engines, Fuel temperature. M. Marion. 2,473,808, June 21.
Control for internal-combustion engines, Speed. M. Mallory. 2,473,761-2, June 21.
Control for oil burners, Draft. A. T. Ledoux. 2,473,804, June 21.
Control of fuel-injection engines. A. F. Sanders. 2,474,121, June 21.
Control station for servo-motors, Multivalve. R. R. Stevens. 2,473,695, June 21.
Control system, Automatic. R. Reid. 2,473,905, June 21.
Control system, Electrical. K. J. Stiefel. 2,473,617, June 21.
Control system for electrolytic processes. G. E. Stoltz and J. R. Erbe. 2,473,918, June 21.
Control system for fluid motors. A. M. Olson. 2,474,187, June 21.
Control system for hydraulic machinery. L. A. Camerota. 2,473,676, June 21.
Control system for variable delivery pumps, Hydraulic. W. R. Tucker. 2,474,174, June 21.
Control system for vehicle ride stabilizing equipment, Electric. G. R. Purifoy. 2,473,903, June 21.
Control system, Frequency. J. R. Boykin. 2,473,853, June 21.
Control system, Relay. C. M. Hines. 2,473,683, June 21.
Control system, Remote tuner. N. R. Ridgely, Jr., and C. B. Coleman. 2,473,907, June 21.
Control system, Supercharger compression temperature. H. T. Sparrow. 2,474,018, June 21.
Control system, Voltage. E. L. Deeter. 2,473,512, June 21.
Control unit, Hydraulic tool. A. P. Waterson. 2,474,134, June 21.
Controller. H. C. Krapf. 2,473,889, June 21.
Conversion attachment, Rifle sight. U. Lillard. 2,473,891, June 21.
Conversion system, Catalytic. J. E. Seebold. 2,474,014, June 21.
Cooler having automatic bimetal thermostat controlled shutter, Oil. W. R. Ramseur. 2,474,162, June 21.
Core, Reinforced. M. M. Marks. 2,474,186, June 21.
Corneal trephine. R. T. Paton. 2,473,968, June 21.
Counter, Produce. J. P. Tully. 2,474,130, June 21.
Counting mechanism. L. Namenyi-Katz. 2,474,156, June 21.
Coupler between contiguous ends of aligned wave guide sections, Ultra high frequency. E. C. Okresa and A. H. Laidig. 2,473,724, June 21.
Coupling: *See*—
Fluid coupling. Pipe coupling.
Coupling. A. T. Schweier. 2,473,973, June 21.
Coupling between transmitter and wave guide system. W. G. Tuller. 2,473,834, June 21.
Coupling system for wave guides. K. A. Young. 2,474,137, June 21.
Cover: *See*—
Boat cover.
Cover cloth for clothes pressing machines. E. A. Rich. 2,473,906, June 21.
Cover for telephone desk sets, Decorative. C. H. and M. E. Allen. 2,473,775, June 21.
Crab trap. I. L. Ruiz. 2,473,910, June 21.
Crude oil, Treatment of. R. L. Harris. 2,473,522, June 21.
Crutch. W. J. Yackley. 2,473,671, June 21.
Cup with rounded bottom, Conical paper. W. E. Amberg. 2,473,840, June 21.
Curling device, Hair. E. E. King and D. P. Tate. 2,473,957, June 21.
Cutter: *See*—
Axially expansible rotary cutter.
Cutting device. J. L. Lehnherr. 2,473,756, June 21.
Cutting machine of the hammer-driven cutter blade type, Portable brush and tree. A. E. Cuthrell. 2,474,037, June 21.
Cylinder, Master. L. E. La Brie. 2,473,603, June 21.
Dash-controlled hydraulic jack. J. I. Long. 2,473,757, June 21.
Davit. M. L. Woodruff. 2,473,557, June 21.
Deflection circuit. M. Wolf. 2,473,983, June 21.
Desoxy iso-xanthopterins and making same. J. H. Mowat and J. H. Boothe. 2,473,811, June 21.
Detergent and making same, Water softening. E. A. Robinson. 2,473,822, June 21.
Device and process for twisting and spinning. E. C. Gwaltney. 2,473,520, June 21.
Device for controlling oscillating circuits. C. A. Wiley. 2,473,556, June 21.
Device for expelling static charges from dielectrical substances. H. R. Johnson. 2,473,751, June 21.
Device for heat sealing seams. M. Staw. 2,473,552, June 21.
Device for softening beards. H. C. Wesley, Sr. 2,473,926, June 21.
Device for teaching music. W. H. Coleman. 2,473,988, June 21.
Device to reprodnce timing disks. H. E. McCoy. 2,473,536, June 21.
Dicarboxylic acid anhydrides, Producing. I. E. Levine and W. H. Claussen. 2,474,002, June 21.

Die and die set for shoe parts and the like. F. Wunder. 2,473,837, June 21.
Discharge device, Electrical. C. G. Smith. 2,473,820, June 21.
Discharge device, Electron. R. C. Schmidt. 2,473,547, June 21.
Discharge device, Electronic. W. C. Brown. 2,473,567, June 21.
Discharge device, Gaseous. P. W. Stutsman. 2,473,833, June 21.
Discharge device, Low-pressure electric. C. G. Found and W. J. Winninghoff. 2,473,642, June 21.
Discharge device of the cavity resonator type, Electronic. P. L. Spencer. 2,473,827–8, June 21.
Discharge device of the magnetron type, Electron. P. L. Spencer. 2,473,828, June 21.
Discharge device, Ultra high frequency electron. N. E. Prysiak and K. M. McLaughlin. 2,473,969, June 21.
Dispenser with slitted resilient diaphragm. A. Hammerstein. 2,473,707, June 21.
Dispensing container. C. H. Thompson. 2,474,070, June 21.
Display carton with support. K. T. Buttery. 2,473,635, June 21.
Distribution apparatus. G. D. Porter. 2,474,065, June 21.
Divider for tractor-mounted harvesters, Center. E. M. Van Buskirk. 2,473,978, June 21.
Doctor operating mechanism. A. W. Johnson. 2,474,052, June 21.
Door casing gauge. J. W. Erickson. 2,473,639, June 21.
Drill, Dental. M. F. Grogl. 2,473,583, June 21.
Drive for planters, Reel. G. M. Kriegbaum and C. C. Haas. 2,473,959, June 21.
Drive mechanism. J. L. Perkins. 2,473,816, June 21.
Drive mechanism for automatic lathes. W. F. Groene and H. C. Kemper. 2,474,104, June 21.
Drying apparatus. B. R. Andrews. 2,473,629, June 21.
Drying apparatus, Hair. A. G. Roberts. 2,474,165, June 21.
Dual-voltage dual speed capacitor motor. P. H. Trickey. 2,474,195, June 21.
Duct element, Intended in particular for laying electric cables. C. Ruchti. 2,473,909, June 21.
Dust collector. G. C. Zillotto. 2,473,672, June 21.
Dyestuffs, Anthrimide-carbazole. H. Hauser and M. Rommer. 2,473,950, June 21.
Dyestuffs, Disazo. C. I. Anderson. 2,474,024, June 21.
Dyestuffs, Monoazo. B. J. Heywood. 2,473,885, June 21.
Ejecting mechanism for carrying scrapers, Load. P. Zakel. 2,473,774, June 21.
Electric pump. W. H. Payne. 2,473,726, June 21.
Electric steaming stand. L. I. Osipow. 2,474,113, June 21.
Electric switch. J. Fowler. 2,473,992, June 21.
Electric switch. M. E. Porter. 2,474,189, June 21.
Electrical system. P. W. Stutsman. 2,473,832, June 21.
Electrically and power operated pitch changing mechanism. A. G. Forsyth. 2,474,144, June 21.
Electromagnet, Polarized. W. B. M. Clark. 2,473,939, June 21.
Enema tube. H. L. Pohl. 2,474,188, June 21.
Engine: *See*—
Internal-combustion engine. Two-cycle opposed piston engine.

Self-reversing power jack.
Joint: *See*—
Structural joint. Universal joint.
Lactic acid, Producing. K. W. Fries. 2,474,046, June 21.
Lamp of double spiral convolution, Electric. A. Greiner. 2,473,878, June 21.
Last pulling and relasting machine, Turret type. J. T. Lancaster. 2,473,595, June 21.
Latch for drop-side cribs. H. F. Shaw. 2,473,914, June 21.
Lawn mower. J. Verderber and R. H. Liska. 2,474,131, June 21.
Lead-in wire for electric lamps and similar devices. P. B. Jordan and M. Pipkin. 2,473,888, June 21.
Leg support device. W. P. Hamstrom. 2,473,947, June 21.
Lens camera, Plural. E. Roberts. 2,473,767, June 21.
Level control in packed towers. J. E. Storment. 2,473,737, June 21.
Lifting arm for bulldozer blades, Attachable. L. R. Brock. 2,473,505, June 21.
Lifting, braking, and jacking system for vertical-shaft rotating machines. R. A. Baudry and P. R. Heller. 2,473,847, June 21.
Lifting jack. H. D. Freeland. 2,474,045, June 21.
Limiting system for Ward-Leonard drives, Current. T. B. Montgomery and T. H. Bloodworth. 2,473,721, June 21.
Liner, Railway truck pedestal. W. H. Meyer. 2,474,006, June 21.
Liquid level translating means. C. R. McCauley. 2,474,154, June 21.
Liquid styrene-butadiene interpolymers. O. R. McIntire. 2,473,538, June 21.
Lock handle, Safety automobile door. E. H. Cameron. 2,473,937, June 21.
Locking device, Electric. J. E. Taylor. 2,473,664, June 21.
Locking means for rotary operating bars of door fasteners. G. E. Dath. 2,473,679, June 21.
Loop with thermocouple, Pickup. H. Benioff. 2,473,779, June 21.
Louver, Directional air flow. M. I. Levy. 2,474,152, June 21.
Lubricating oil filter. J. A. Pickard. 2,474,101, June 21.
Lubricator: *See*—
Cable lubricator.
Lug rebuilding method for tires, Tread. V. Rawls. 2,474,013, June 21.
Machine for forming article supporting pallets for wrapping machines. N. W. Lyon and R. E. Brown. 2,473,656, June 21.
Machine for manufacturing spherical gears. J. H. Hitchcock. 2,473,709, June 21.
Machine for straightening and sizing castings, forgings, stampings, or the like. C. W. Bell. 2,473,673, June 21.
Machine or apparatus for surfacing roads. C. G. Mandt and A. S. Millikin. 2,473,901, June 21.
Magazine, Blade. J. Muros. 2,473,812, June 21.
Magnesium oxide, Production of. R. R. Lloyd. 2,473,534, June 21.
Magnet for electric bulbs. H. L. White. 2,473,626, June 21.
Making prosthesis. A. A. Nelson. 2,473,723, June 21.
Mallet, Instrument. B. W. Dane. 2,473,865, June 21.
Manganese dioxide, Preparation of. M. Beja and R. A. Loley. 2,473,563, June 21.
Manually operated hydraulic press. W. E. Renick. 2,473,894, June 21.
Mask for aviation, Pressure breathing. H. F. Garrard and E. V. Rupp. 2,473,518, June 21.
Mat, Stove. B. Gershon. 2,474,102, June 21.
Means to eliminate drippage of condensation in open-view frozen food cases. J. A. Brinkoeter. 2,473,781, June 21.
Measurement of light values using automatic gain control in photomultiplier tubes, Photometric. G. L. Dimmick. 2,474,098, June 21.
Measuring apparatus, Liquid flow. V. G. Platts. 2,473,765, June 21.
Measuring mechanism, Angle. F. E. Harris, A. S. Hegeman, Jr., D. H. Mitchell, and H. N. Snook. 2,473,682, June 21.
Metal radiant for gas heaters. R. Shelton. 2,474,169, June 21.
Method and apparatus for assembling incandescent lamp mounts. M. L. Stone. 2,473,919, June 21.
Method and apparatus for assembling parts. H. G. Kellogg. 2,473,590, June 21.
Method and apparatus for corrugating sheet metal by a reciprocating bender with a pivoted side shaper. M. N. Lebedeff. 2,473,533, June 21.
Method and apparatus for feeding sheets. R. T. Chatterton. 2,474,141, June 21.
Method and apparatus for making containers. H. D. Crandon. 2,474,035, June 21.
Method and apparatus for welding structural cages. A. G. Butler. 2,473,858–9, June 21.
Method of and apparatus for contacting fluids. R. L. Maycock. 2,474,007, June 21.
Method of and apparatus for finishing garments. R. E. Sands. 2,473,823, June 21.
Method of and apparatus for measuring the film strength of liquids. A. J. Stokes. 2,473,553, June 21.
Method of and material for protecting and conditioning metal surfaces. E. Snyder. 2,473,614, June 21.
Microporous sheet material, Making. J. J. Raymond and W. H. Lebmberg. 2,474,201, June 21.
Microtome and electrostatic dispersal apparatus therefor. H. R. Johnson. 2,473,753, June 21.
Mill: *See*—
Centrifugal ball mill.
Milling machine, Pattern controlled. W. Wilder and H. Horlacher. 2,473,741, June 21.
Mineral oil compositions and the like. G. H. Denison, Jr., and P. C. Condit. 2,473,511, June 21.
Mixing, Art of. H. J. Seaman. 2,473,770, June 21.
Modulation system. W. M. Hall. 2,473,794, June 21.
Moisture content-temperature correlation in a moving bed catalyst regeneration process. R. Lee and F. E. Ray. 2,474,198, June 21.
Mold: *See*—
Concrete mold.
Mold for concrete blocks, Portable. E. F. Green. 2,473,748, June 21.
Molding hollow articles. A. A. Nelson. 2,473,722, June 21.
Molding lenses and like optical elements. J. Johnson. 2,473,588, June 21.

Motor: *See*—
Constant-speed electric motor.
Rotary combustion motor.
Dual-voltage dual speed capacitor motor.
Motorcar carrier. C. C. Stuart. 2,473,830, June 21.
Mounting: *See*—
Instrument mounting.
Mounting and driving the land rotor of agricultural or like vehicles. G. H. F. Knight. 2,473,800, June 21.
Mounting for electron discharge device of the high-frequency type. J. B. Atwood and B. Trevor. 2,474,026, June 21.
Mounting for racing cars, Poise. E. H. Gillitzer. 2,473,519, June 21.
Multiple tube forced-draft and air flow air heater. G. L. Carter. 2,474,090, June 21.
Musical instrument, Electrical. S. L. Miller. 2,473,897, June 21.
N-heterocyclic substituted guanamines. J. T. Thurston. 2,474,194, June 21.
Notching device, Page. F. W. Moth. 2,473,604, June 21.
Nozzle. F. Boehm. 2,473,674, June 21.
Nozzle, Sprayer. J. Zielinski. 2,473,933, June 21.
Object detecting and indicating device. F. W. Lyle. 2,473,893, June 21.
Oil burner having air admission and fuel vaporization means. H. C. Little. 2,473,653, June 21.
Oiler, Hand. A. G. Anderson. 2,473,696, June 21.
1,3-dioxolane polymers. W. F. Gresham. 2,473,994, June 21.
Ores containing nickel, Reduction of. R. C. Hills and M. F. Dufour. 2,473,795, June 21.
Organic compounds, Oxidation of. I. E. Levine. 2,474,001, June 21.
Oscillator, Concentric line. C. A. Boddie. 2,473,504, June 21.
Oyster opening apparatus. J. L. Plock. 2,473,609, June 21.
Oyster opening method. J. Plock. 2,473,608, June 21.
Package. H. Rumsey, Jr. 2,474,120, June 21.
Package. H. Rumsey, Jr. 2,474,166, June 21.
Package for dispensing interfolded sheets. G. E. Wolf. 2,473,932, June 21.
Packing of plastic material. A. D. Wilson and W. Dalziel. 2,474,130, June 21.
Paintbox. P. Lasare. 2,473,532, June 21.
Panel, Current distribution. E. G. Johansson. 2,473,685, June 21.
Paper roll holder. E. O. Bulman. 2,473,744, June 21.
Paperweight. J. J. Curley. 2,474,036, June 21.
Parachute leader. A. B. Schultz. 2,474,124, June 21.
Partition, Box. R. C. Richey. 2,473,766, June 21.
Pattern mechanism for knitting machines. E. J. Berger and H. K. West. 2,473,503, June 21.
Phenol salts from aqueous solutions, Recovery of. C. W. Berger. 2,474,028, June 21.
Phonograph pickup, Magnetron-type. H. K. Richards. 2,473,820, June 21.
Pickup with mechanical filter, Phonograph. H. P. Kalmus. 2,473,650, June 21.
Pilot valve. F. W. Schneck. 2,474,122, June 21.
Pin: *See*—
Safety pin.
Pipe: *See*—
Smoker's pipe.
Pipe coupling. P. D. Wurzburger. 2,474,178, June 21.
Plasticizer. L. D. Myers and J. D. Fitzpatrick. 2,474,010, June 21.
Plasticising knitted goods made from thermoplastic yarn. A. E. Collidge, E. C. Dawes, and T. A. Gilbert. 2,474,093, June 21.
Platform control, Combine. L. K. Lohn. 2,473,655, June 21.
Plotting device, Electronic curve. C. H. Schleaman. 2,474,192, June 21.
Plug: *See*—
Igniter and lamp plug.
Plug for sealing bores, Expansible. A. Gorskowski. 2,474,047, June 21.
Plugs, Manufacturing attachment. N. Chirelstein. 2,473,570, June 21.
Polishing process, Electrolytic. D. R. Turner. 2,473,923, June 21.
Polyalkyl-cyclohexanol acrylates. C. E. Rebberg and C. H. Fisher. 2,473,544, June 21.
Polychlorophenols in fermentation of carbohydrates. A. Barreto. 2,473,630, June 21.
Polymerizable compositions, Emulsions of. E. L. Kropa. 2,473,801, June 21.
Polymerization of vinylidene compounds in aqueous emulsion in the presence of ionizable silver compounds and ammonia. G. W. Smith. 2,473,548, June 21.
Polymerization process. W. K. Wilson. 2,473,929, June 21.
Polymerized vinyl aromatic materials. R. F. Hayes. 2,473,708, June 21.
Polymerizing vinylidene compounds in aqueous medium in the presence of silver ion and oxalate ion. G. W. Smith. 2,473,549, June 21.
Polymers from ethylene and branched chain vinyl esters. W. E. Hanford, J. R. Roland, and W. E. Mochel. 2,473,996, June 21.
Polyvinyl ketals, Production of. W. R. Cornthwaite and N. W. Flodin. 2,474,095, June 21.
Port and coupling, Tank. G. E. White. 2,473,669, June 21.
Portable heater. J. W. Brown, Jr. 2,473,783, June 21.
Positioning device. E. P. Bullard, III. 2,473,506–7, June 21.
Preparing 4-amino-1,8-naphthalic acid imides. H. Z. Lecher, M. Scalera, A. W. Joyce, and W. S. Forster. 2,474,185, June 21.
Preservation of pigments in alfalfa. J. C. Kephart. 2,474,182, June 21.
Preserving and maintaining color of green vegetables, Art of. L. F. Gieseker. 2,473,747, June 21.
Press: *See*—
Manually operated hydraulic press.
Shear press.
Pressure head, Electric. C. M. Hathaway. 2,474,146, June 21.
Prism system for refractometer of the Abbé-type. J. W. Forrest. 2,474,044, June 21.
Procedure for making multiply metal stock. J. Kinney, Jr. 2,473,712, June 21.
Processing storage battery plates, Machine for. M. F. Chubb. 2,474,091, June 21.
Producing potassium tungstate. H. S. Colton, R. W. Frischmuth, and R. L. Knowles. 2,473,703, June 21.
Production of heat-treating atmospheres, Apparatus for. J. G. Hoop. 2,473,527, June 21.
Projection machine, Image copying. R. M. Lacey. 2,474,055, June 21.
Propeller. G. Annesley. 2,473,697, June 21.
Propeller. W. W. K. Van Nort. 2,473,665, June 21.
Propeller device, Marine. J. H. Miller. 2,473,603, June 21.
Propulsion for aircraft and the like. A. G. Forsyth. 2,474,143, June 21.
Protecting metal surfaces during soldering and brazing processes. C. H. Jennings, and E. R. Gamberg. 2,473,887, June 21.
Pteroylglutamic acid, Purifying. C. W. Waller. 2,474,022, June 21.
Pulverizer having internal flow area adjusting means, Air-swept. G. B. Ebersole. 2,473,514, June 21.
Pump: *See*—
Electric pump.
Heavy oil and sand pump.
Variable capacity vane pump.
Pump and motor hydraulic transmission system, Rotary. B. A. Kearns, and J. Decker. 2,473,711, June 21.
Purifying glutamic acid amides of pteroylglutamic acid. E. Kuh, and J. M. Smith, Jr. 2,474,184, June 21.
Quaternary ammonium compounds and making same. J. B. Rust. 2,474,202, June 21.
Rack: *See*—
Towel rack.
Radio antenna, Illuminated. F. G. Wood. 2,473,981, June 21.
Railway crossing. F. L. Condon. 2,473,941, June 21.
Razor, Electromechanical safety. M. Berger. 2,474,027, June 21.
Reader and projecting apparatus, Microfilm. N. S. Stern. 2,473,736, June 21.
Rearview mirror adjustable by rotation about a median axis. F. J. Aves. 2,473,098, June 21.
Receptacle holder. R. R. Rundell. 2,474,187, June 21.
Reciprocating tool. L. M. Larsen. 2,474,056, June 21.
Recorder, High-speed telegraphy signal. C. W. Hansell. 2,474,049, June 21.
Recording and computing machine. E. F. Thierfelder. 2,473,738, June 21.
Rectifier, Glow tube. P. W. Stutaman. 2,473,831, June 21.
Rectifying arrangement. G. H. Pohm. 2,473,662, June 21.
Reduction of polycyclic aromatic hydrocarbons, Partial. V. L. Hansley. 2,473,997, June 21.
Refacing device, Breaker point. H. C. Bartlow, Sr. 2,474,086, June 21.
Refrigerating apparatus. F. I. Rataiczak. 2,473,904, June 21.
Refrigerating means. J. F. Saye. 2,473,730, June 21.
Refrigerator liner support. G. E. Curtiss, Jr. 2,473,573, June 21.
Register, Cash. M. Demeulenaere. 2,473,509, June 21.
Regulating system. D. F. Aldrich. 2,473,838, June 21.
Regulating system. S. L. Bradley. 2,473,854, June 21.
Regulating system. E. L. Harder and C. E. Valentine. 2,473,882, June 21.
Relay, Electromagnetic. F. E. Wood. 2,473,982, June 21.
Relay, Electromagnetic mercury. J. P. Keating. 2,474,000, June 21.
Relay system. F. D. Snyder. 2,473,916, June 21.
Release for toy guns, Electric. C. Jones. 2,474,054, June 21.
Remote control valve. J. H. Derby. 2,473,867, June 21.
Repeat device for automatic phonographs. S. A. Stolberg. 2,473,829, June 21.
Resins derived from acrylonitrile adducts, Synthetic. J. R. Dudley. 2,473,498, June 21.
Resonator, Variable cavity. J. T. Beechlyn. 2,473,777, June 21.
Retainer for fluid seals. C. E. Schmitz. 2,474,123, June 21.
Retractor, Automatic flap. A. P. Fontaine. 2,473,792, June 21.

Riboflavin, Producing. A. S. Phelps. 2,473,818, June 21.
Riboflavin, Production of. A. S. Phelps. 2,473,817, June 21.
Ring: *See*—
Clamping ring.
Slip ring.
Rocket propulsion by reacting alkyl-substituted mononuclear aromatic amines and nitric acid. V. L. King. 2,474,183, June 21.
Roller adjustment and method, Ductor. H. E. Peyrebrune. 2,474,160, June 21.
Roller, Load supporting. E. A. Domke. 2,473,868, June 21.
Rotary bit operating mechanism. H. W. McDonald. 2,473,537, June 21.
Rotary cleaning tool. G. H. Loeser and C. C. Gangle. 2,473,654, June 21.
Rotary combustion motor. W. A. Cate. 2,473,785, June 21.
Rotor for hammer mills and the like, Disintegrator. C. W. Lanter. 2,473,531, June 21.
Rounding machine. L. E. Topham and E. W. Smith. 2,473,621, June 21.
Rule, Slide. H. H. Goldstaub. 2,473,676, June 21.
Safety pin. G. D. Marrocco. 2,474,112, June 21.
Sander head, Brush. H. S. Newton. 2,474,063, June 21.
Sanding block. J. Paul. 2,474,064, June 21.
Scoop, Handy stoker. O. L. Hulstedt. 2,473,647, June 21.
Scraper, Rotary earth. E. V. Collins. 2,473,786, June 21.
Screen, Television receiver. C. G. Smith. 2,473,825, June 21.
Screw and nut, Antifriction. W. B. Barnes. 2,473,743, June 21.
Screw, Self-locking tappet. C. E. Johnson. 2,473,752, June 21.
Seal for electric lamps and similar devices, Internal exhaust. P. O. Cartun. 2,473,860, June 21.
Seal, Rotary drier. L. W. Jillson. 2,473,710, June 21.
Sealing and positioning means for grinder mechanisms or the like. R. S. Dewey. 2,473,513, June 21.
Sealing means, Piston. S. Vernet. 2,474,132, June 21.
Secondary amines of 3,3 bis(p-aminophenyl) phthalide. C. S. Adams. 2,474,084, June 21.
Seesaw, One-person. M. D. Wolf. 2,474,061, June 21.
Selecting mechanism. O. Fregeolle. 2,473,944, June 21.
Self-reversing power jack. B. Brassell. 2,473,566, June 21.
Self-supporting aerial electric conducting cable. J. J. Morrison and A. L. Duna. 2,473,665, June 21.
Separation of acetone and butyl alcohol from fermented mash by activated charcoal. M. Sulsbacher. 2,474,170, June 21.
Separator: *See*—
Fluid separator.
Inclined current hydraulic separator.
Servomotor, Frictional. S. J. Mikina. 2,473,896, June 21.
Servo operator, Magnetic. N. D. Cooper and E. A. Ruchty. 2,473,572, June 21.
Servo system, Induction motor. J. A. Doremus. 2,473,791, June 21.
Sewing-machine feed. S. Adler. 2,473,934, June 21.
Shackle and release, Bomb. G. H. Leland. 2,473,597, June 21.
Shade, Lamp. M. Sarra. 2,473,708, June 21.
Shaker, Salt and pepper. R. D. Harwood. 2,473,585, June 21.
Sharpening device. A. F. Carlin. 2,473,702, June 21.
Shear press. R. F. Dehn. 2,473,942, June 21.
Shoe, Luminescent. J. Goldstein. 2,473,877, June 21.
Shoe, slipper or the like and making same, Platform type. A. Orlando. 2,473,005, June 21.
Signaling device for vehicles. H. J. Beemer. 2,473,631, June 21.
Silicate-titanate phosphors. F. A. Kroger. 2,473,900, June 21.
Silicon halides, Preparation of. A. J. Barry, J. W. Gilkey, and L. De Pree. 2,474,087, June 21.
Sinker. J. Gross. 2,473,544, June 21.
Skate. J. Wutz. 2,474,082, June 21.
Slip, Petti-bra. J. Read. 2,474,115, June 21.
Slip ring. A. Hood, M. Sobel, and E. A. Terhune. 2,473,526, June 21.
Slivers of artificial fibers, Production of. W. G. Abbott, Jr. 2,473,499, June 21.
Smoker's pipe. D. P. Lavietes. 2,473,715, June 21.
Snap acting device and electric switch. A. L. Riche. 2,473,970, June 21.
Snubbing means. G. E. Dath. 2,473,678, June 21.
Soap with ingrained emblems, Making bar. A. H. Knoll. 2,473,530, June 21.
Soldering machine, Induction can. W. Lampiris. 2,473,755, June 21.
Solenoid, Fabricated rotary. G. H. Leland. 2,473,598, June 21.
Solenoid for control of model railroad switches, Double-acting. H. B. Peabody. 2,473,661, June 21.
Sound detecting and indicating system, Underwater. G. H. Schuck. 2,473,974, June 21.
Spectacle with pivoting lens connections, Plastic brace bar. J. J. Rohrbach. 2,474,119, June 21.
Spectacles with interchangeable lenses. A. Talobre. 2,473,619, June 21.
Speed controlled centrifugal valve. W. H. Herstick. 2,473,948, June 21.
Speed controlled centrifugal valve. J. R. Orelind. 2,473,987, June 21.
Splint, Cervical. L. T. McBee. 2,474,200, June 21.
Spring clip. W. H. Neely. 2,474,158, June 21.
Spring suspension, Vehicle. D. E. Austin and W. B. Fageol. 2,473,500, June 21.
Sprinkler, Power. A. F. Stetson. 2,474,071, June 21.
Stabilization of cathode beam tubes, L. A. Meacham. 2,473,691, June 21.
Stabilization of organic substances. G. H. Denison, Jr., and P. C. Condit. 2,473,510, June 21.
Stabilized brief case. L. Lifton. 2,474,003, June 21.
Stabilizer for icings. A. B. Steiner and L. B. Rothe. 2,474,019, June 21.
Stand: *See*—
Electric steaming stand.
Floral support.
Refrigerator liner support.
Steerable tail wheel. C. Hollerith. 2,473,645, June 21.
Stove, Collapsible camp. J. H. Etches. 2,474,043, June 21.
Store, Portable heat-adjusting charcoal. D. T. Cast. 2,473,569, June 21.
Stretching cellulose acetate filaments. P. F. C. Sowter. 2,473,815, June 21.
Striping of vinyl resin coated wires with ketone dye solutions. R. J. Brown. 2,474,088, June 21.
Structural element, Metallic. J. C. Timm. 2,473,976, June 21.
Structural joint. J. E. Rutledge. 2,473,728, June 21.
Strut, Extensible. R. G. Bode. 2,473,632, June 21.
Support: *See*—
Adjustable earpiece support.
Display carton with support.
Support for ironing boards and the like, Folding. U. K. Johannsen. 2,474,107, June 21.
Support means for oil pipes and electrodes in oil burners. C. E. Schinman. 2,473,709, June 21.
Supporting means for basketball baskets. H. Rubin. 2,473,908, June 21.
Supporting observers in range-finder systems. E. von Segebaden. 2,474,138, June 21.
Surface active agent, Nonionic. R. H. Kienle and G. P. Whitcomb. 2,473,798, June 21.
Suspension, Rail truck. A. S. Krotz. 2,473,714, June 21.
Swing hinge, Check. G. Riemer. 2,474,164, June 21.
Switch: *See*—
Centrifugal switch.
Electric switch.
Snap acting device and electric switch.
Thermostatic switch.
Thermostatically operated switch.
Switch. J. R. Bird. 2,473,565, June 21.
Switchgear, Metal-clad. L. B. Chubbuck. 2,473,861, June 21.
Switching and modulation system. A. S. Maeder. 2,473,585, June 21.
Swivel for electric cables. E. Sokolik. 2,474,070, June 21.
Synthesis of diethyl ketone. W. F. Gresham, R. E. Brooks, and W. E. Grigsby. 2,473,995, June 21.
Synthesis of metal carbonyls. W. F. Gresham and J. V. E. Hardy. 2,473,993, June 21.
Synthetic linear polyamides and process for retarding crystallization of said polyamides. I. F. Walker. 2,473,924, June 21.
Syringe. A. E. Smith. 2,473,733, June 21.
Syringe, Hypodermic. A. E. Smith. 2,473,734, June 21.
System for volume compressions. G. K. Graham. 2,474,103, June 21.
Table: *See*—
Combination sink and dining table.
Tachometer, Electric. L. V. R. Philpott. 2,473,542, June 21.
Target stage, Adjustable. H. Kats. 2,473,651, June 21.
Telephone, Electromagnetic soundpowered. G. L. Dimmick. 2,474,197, June 21.
Tester and indicator, High-voltage. E. V. Sundt. 2,474,073, June 21.
Tester, Flexibility. M. L. Anderson. 2,473,841, June 21.
Tester for controlling recirculation of material in drying apparatus, Moisture. A. B. Welty. 2,474,204, June 21.
Testing apparatus, Compression. L. V. Robinson. 2,474,116, June 21.
Testing machine, Adhesion. D. M. Freedman. 2,473,517, June 21.
Thermocouple with radiating fins. G. S. Wickizer and E. N. Brown. 2,473,627, June 21.
Thermostatic switch. M. E. Porter. 2,474,190, June 21.
Thermostatically operated switch. G. W. Crise. 2,473,780, June 21.
Thickness gauge. G. H. Rendel. 2,474,117, June 21.
Thin microporous silica coatings having reflection reducing characteristics and the articles so coated, Producing. H. R. Moulton. 2,474,061, June 21.
Tip cleaner holder. H. D. Maiden. 2,473,758, June 21.
Tire mounting or demounting device, Fluid pressure actuated. M. M. Cook. 2,473,571, June 21.
Tire relief valve. F. W. Schwinn. 2,473,912, June 21.
Toaster, Automatic. P. J. McCullough. 2,473,719, June 21.
Toe plate for ski bindings. E. H. Carroll. 2,473,637, June 21.
Tone control. J. D. Reid and P. F. G. Holst. 2,474,191, June 21.

Tool: *See*—
Reciprocating tool. Wrecking tool.
Rotary cleaning tool.
Tool apparatus. J. Oakley. 2,473,815, June 21.
Tooth, Artificial. L. Egger. 2,473,515, June 21.
Toothbrush. H. D. West. 2,473,773, June 21.
Torch machine, Flame cutting. E. G. Livesay. 2,474,153, June 21.
Totalizer. A. Edelman. 2,473,578, June 21.
Totalising device, Pressure. A. A. Markson. 2,473,717, June 21.
Towel rack. E. G. Slater. 2,473,771, June 21.
Toy, Rolling. J. Davis. 2,473,574, June 21.
Tracer mechanism for machine tools. E. E. Hallberg and J. C. Verstynen. 2,473,584, June 21.
Track, Endless. R. G. Le Tourneau. 2,474,057, June 21.
Traction device. C. W. Boone. 2,473,782, June 21.
Tractor drive mechanism. G. Albright. 2,474,085, June 21.
Training apparatus, Optical. R. C. Dehmel. 2,474,096, June 21.
Transducer, Electroacoustic. L. E. Barton. 2,473,846, June 21.
Transducer, Underwater. D. E. Ross. 2,473,971, June 21.
Transfer system. G. L. Clayboum. 2,473,863, June 21.
Transformer. E. H. Freeman. 2,473,746, June 21.
Transmission and clutch, Hydraulic. R. I. Cumming. 2,473,638, June 21.
Transmission system, Centralized music. S. K. Lackoff. 2,474,110, June 21.
Transmission, Variable-speed power. G. Reid. 2,473,545, June 21.
Transmitter, Spark. H. Benioff. 2,473,780, June 21.
Trap: *See*—
Crab trap.
Tray or shelf, Stepladder. M. M. Hickey. 2,473,951, June 21.
Tray type liquid fuel burner. K. C. Caldwell. 2,473,568, June 21.
Treatment of alkali cellulose. G. M. A. Kayser. 2,473,954, June 21.
Trialkyl phenyl phosphates from purified petroleum alkyl phenols. R. L. Shuman. 2,473,612, June 21.
Triazolylene triazines and preparation thereof. D. W. Kaiser. 2,473,797, June 21.
Trimmer, Wallpaper. H. M. Stanley. 2,473,551, June 21.
Tripping device. D. I. Bohn. 2,474,029, June 21.
Truck, Industrial. H. C. Musgrave. 2,473,650, June 21.
Truck, Railway. H. M. Pflager. 2,474,012, June 21.
Tube: *See*—
Enema tube.
Tube for brakes, Expander. C. Hollerith. 2,473,646, June 21.
Tubes, pipes, and the like. P. R. Goldman. 2,473,875, June 21.
Tunnel, Food freezing. A. Silvera. 2,474,069, June 21.
Twisting device and method. E. C. Gwaltney. 2,473,521, June 21.
2-acetoxybenzyl acetylsalicylate. G. J. Martin and H. Uriet. 2,474,005, June 21.
2- and 4-sulfanilamido quinazoline. F. J. Wolf. 2,473,931, June 21.
Two-cycle opposed piston engine. M. Mallory. 2,473,759, June 21.
2,4,5-triamino-6-hydroxypyrimidine, Preparation of. E. Kuh, and H. S. Barnaby. 2,473,802, June 21.
Tying device. H. Truswell. 2,473,622, June 21.
Undergarment for men. D. W. Murphy. 2,473,692, June 21.
Unit and system, Heater. E. B. Barnes. 2,473,562, June 21.
Unit for hanging and protecting a garment. C. E. Prahman. 2,473,902, June 21.
Unit, Speed selection. R. E. McKelvey. 2,473,963, June 21.
Unit water heater. E. S. Bagley. 2,473,560, June 21.
Unit, Water purification. G. M. Booth. 2,473,986, June 21.
Universal joint. G. B. Stillwagon, Jr. 2,473,618, June 21.
Utensil, Ice disintegrating. F. W. Earnest, Jr. 2,474,100, June 21.
Utility machine, Power-operated portable general. H. S. Harvey. 2,473,883, June 21.
Valve: *See*—
Hose connector and valve. Speed controlled centrifPilot valve. ugal valve.
Remote control valve. Tire relief valve.
Valve. F. E. Kiliner. 2,473,591, June 21.
Valve. W. D. Teague, Jr. 2,473,620, June 21.
Valve for hydraulic systems, Relief. H. E. and M. W. Huber. 2,473,953, June 21.
Valve mechanism, Fluid pressure relay. N. G. Kershaw. 2,473,687, June 21.
Valve of water gas generators and the like, Stack. F. A. MacGregor. 2,474,111, June 21.
Varisble capacity vane pump. T. J. Thatcher. 2,473,921, June 21.
Vehicle based arresting gear. A. B. Scholtz. 2,474,125, June 21.
Vending machine, Coin controlled package. H. P. Compton. 2,474,142, June 21.
Vending machine with magazine rotating on horizontal axis, Bottle. E. C. Johnson and J. E. Hagstrom. 2,474,053, June 21.
Vibration eliminating apparatus. E. J. Egle, Jr. 2,474,042, June 21.
View taking apparatus. L. G. A. Pejois. 2,474,150, June 21.
Vise or clamp, Toolmaker's. J. M. Frobiom. 2,473,843, June 21.
Water softener. M. Gambill. 2,474,145, June 21.
Water tank and truck body, Combination. O. Colquitt. 2,474,094, June 21.
Wave heater. J. E. Hill and T. M. Ambler. 2,474,147, June 21.
Web and producing same, Unwoven filamentary. H. L. Hoover. 2,473,528, June 21.
Welded structure and assembling same. E. A. Parmann. 2,473,660, June 21.
Welding apparatus. H. M. Talley. 2,474,075, June 21.
Welding apparatus. V. N. Tramontini. 2,474,129, June 21.
Welding fins to tubular members by electric resistance welding. J. W. Brown, Jr. 2,473,633, June 21.
Welding method, Electric resistance. J. W. Brown, Jr. 2,473,634, June 21.
Welding method, Electric resistance. G. Welsh. 2,473,668, June 21.
Welding system. J. W. Dawson. 2,473,576, June 21.
Welding system, Condenser. H. Klemperer. 2,473,799, June 21.
Welding system, Electric stored energy resistance. A. Vang. 2,473,772, June 21.
Welding system, Resistance. J. W. Dawson. 2,473,575, June 21.
Wheel: *See*—
Steerable tail wheel.
Wheeled carrier. E. K. Fosbender. 2,473,873, June 21.
Winding device or winch. W. D. Allison. 2,473,628, June 21.
Window construction, Reversible. W. B. Tidwell. 2,474,126, June 21.
Window mechanism. H. C. Richardson. 2,473,821, June 21.
Wing for aircraft, Rotating. C. R. Wilson. 2,474,079, June 21.
Work rest and forming the same. L. Zimmermann. 2,474,138, June 21.
Wrecking tool. W. J. Davies. 2,473,866, June 21.
X-ray pictures with betatron, Stereoscopic. D. W. Kerst. 2,473,956, June 21.
Zinc, Production of. S. Robson. 2,473,611, June 21.

CLASSIFICATION OF PATENTS

ISSUED JUNE 21, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

1— 1: 2,473,590
2— 48: 2,473,740

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE FLETT

No. 5572. Decided April 12, 1949

[— F.2d —; 81 USPQ 388]

1. PATENTABILITY—METHOD—APPLICATION TO SPECIFIC MATERIAL.

Where the characteristics of active carbon as an adsorbent of color and odor in various solutions and substances was well known, *Held* that no invention was required to apply it to solutions while they were in the liquid state for the purpose of retarding for a time the development of an unpleasant odor.

2. SAME—PARTICULAR SUBJECT MATTER—METHOD OF RETARDING DEVELOPMENT OF ODOR IN ALKYL ARYL SULFONATES.

Certain claims to an alleged invention in a method of retarding the development of an unpleasant odor in a mixture of alkyl aryl sulfonates *Held* not presenting patentable subject matter in view of the prior art.

APPEAL from the Patent Office. Serial No. 510,667.

AFFIRMED.

Forbes Silsby and *I. Harry Rosenberg* for Flett.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

GARRETT, *C. J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming that of the Primary Examiner rejecting all the claims, numbered 1 to 8, inclusive, 9 and 10, of appellant's application for patent relating to the production of mixtures of alkyl aryl sulfonates. All the claims are method claims and the specification recites, in substance, that the alleged invention relates to improving the properties, especially the odor, of mixtures of alkyl aryl (or benzene) sulfonates which contain as nuclear substituents radicals derived from the hydrocarbons present in a kerosene fraction of petroleum.

The claims are quite long, contain much functional matter, and do not differ from each other in any patentable sense. Claim 1 is deemed sufficient to illustrate the subject matter. It reads:

1. A method of retarding the development of an unpleasant odor in a mixture of alkyl aryl sulfonates having as nuclear substituents radicals derived from a polycomponent hydrocarbon mixture of mineral origin by a Friedel and Crafts condensation, said mixture containing impurities which impart a color to said mixture and impurities which cause development of an unpleasant odor in said mixture when stored in the dry form, *which comprises treating an aqueous solution of said impure mixture of alkyl aryl sulfonates containing at least 4 parts of the impure mixture of alkyl aryl sulfonates per 100 parts by weight of the solution with an active carbon adsorbent, the amount of active carbon being sufficient to substantially decolorize an aqueous sugar solution of the same concentration and color, separating the treated solution from the adsorbent, and evaporating the solution to dryness*, whereby the mixture of alkyl aryl sulfonates is rendered capable of being stored in the dry form for a longer period of time without developing an unpleasant odor to an undesirable degree than an identical mixture of alkyl aryl sulfonates which has not been subjected to said treatment, even though no substantial improvement in the color of said aqueous solution of the mixture of alkyl aryl sulfonates is effected by said treatment.

The italicized language covers the alleged invention.

In several of the claims "benzene" is used instead of "aryl" in naming the mixture treated and the brief for appellant recites other differences (which are unimportant so far as patentability is concerned) in the following:

Claims 1, 2 and 5 define the above process broadly.

Claims 3, 4, 6, 7 and 8 limit the temperature of the active carbon treatment to a temperature above 40° C. and specifically 60° to 80° C. (in claim 8).

Claims 6, 7, 8 and 11 limit the concentration of the aqueous solution subjected to the treatment to 4 to 14 parts by weight of the impure sulfonate mixture per 100 parts by weight of the solution.

Claims 10 and 11 are more limited forms of claims 5 and 7 in which the amount of active carbon employed is 3 to 6 parts per 100 parts by weight of the impure sulfonate mixture.

The claims were held unpatentable over a patent to Guenther et al., 2,220,099, dated November 5, 1940, in view of the disclosure of a publication described as "'Chemical Engineering Catalog,' 17th Ed., 1932, pages 703, 722 & 742."

It was held that the Guenther et al. patent discloses a method of preparing sulfonates substantially similar to the method disclosed in appellant's specification. This holding, so far as method is concerned, is not challenged by appellant.

The "Chemical Engineering Catalog" was cited for its disclosure of the uses of activated carbon in the purification of various solutions. Concerning it the Board said:

> • • • with regard to the use of active carbon for the purpose of deodorizing liquids, we think that the publication to which the Examiner refers amply discloses such use. In connection with the product, "Darco," page 722, the first paragraph points out that this highly activated carbon has the property of deodorizing liquids, solutions and liquefiable substances. It has been used in the purification of oils, fats and waxes of various kinds, as well as solutions of organic chemicals. It is stated, in short, any liquid from which it is desired to eliminate impurities in the form of odor may be treated with this product. Page 703 of the publication refers to "Carbex," activated carbon, which also has the property of purifying liquid materials.

It was the opinion of the Board that, in view of the art cited, "it would be obvious to a person skilled in the art to apply such a well known purifying agent [active carbon] to the products of Guenther et al. for the purpose of removing impurities therefrom which give rise to unpleasant odors."

Vol. 623 • No. 4 Tuesday, June 28, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

The brief for appellant insists that there is a distinction between the prior art cited and his alleged invention in that the prior art merely teaches the use of specific active carbon adsorbents as agents for the removal of colored and odorous impurities from various substances, while he teaches that the application of the active carbon adsorbent, which he describes, to an odorless solution will produce an advantageous result upon the solution product after it is dried and stored.

It is noted that the appealed claims describe the active carbon adsorbent which appellant proposes to use in a somewhat peculiar way. It is to be (as defined in claim 1, supra) in an amount "sufficient to substantially decolorize an aqueous sugar solution of the same concentration and color."

We assume from that description that, in order to determine the amount of the active carbon which should be used as a step in appellant's process of deodorization, the amount of such carbon required to decolorize a solution composed of sugar and water is first determined and this amount is then used in the solution from which the alkyl aryl (or alkyl benzene) sulfonates are developed and eventually stored in dried form. The claims recite that the latter solution contains (*a*) impurities which impart a color to it and (*b*) impurities which cause the development of an unpleasant odor when the mixture is stored after being dried.

The claims themselves are not entirely clear as to the solution being odorless before the ultimate products are dried and stored, but they are capable of that construction, and the brief for appellant treats them as having that meaning. Furthermore, the brief treats the claims as meaning that color in the solution is not affected and that only the impurities which cause the development of the odor in the dried product are affected. It is said, in fact, that at the time the carbon element is injected into the solution the solution is substantially odorless.

We quote the following from the brief for appellant:

> Owing to the strong surface active properties of the mixtures of alkyl aryl sulfonates of the type referred to in the rejected claims, appellant made a discovery which was not to have been expected from Chemical Engineering Catalog and the Guenther patent, when he found that active carbon will remove, from aqueous solutions of the type and concentration called for in the rejected claims, impurities which are not colored or odorous but which cause eventual development of odor in the dried mixtures.
>
> • • • • • • •
>
> Both Examiner and the Board of Appeals have treated this case as if they were dealing merely with a malodorous substance present as an impurity in a known substance. Such is not the case at all.
>
> This application relates to the removal of an impurity *of unknown constitution*, which does not manifest itself as such during the course of manufacture of the product, and which does not make its presence known until a *considerable period has elapsed after manufacture* of the product *has been completed*, at which time it generates an obnoxious odor in the product which is slight at first but increases in intensity with the passage of time. [Italics quoted.]

It does not seem to be questioned by appellant that the cited prior art teaches the use of an active carbon adsorbent for the purpose of deodorizing (as well as for decoloring) liquids, solutions, and liquefiable substances. The "Chemical Engineering Catalog" teaches that, referring to a highly activated carbon sold under the trade name of "Darco." The alkyl aryl (or benzene) sulfonates, into which the introduction of the active carbon is taught by appellant, is a solution in liquid form at the time the carbon is introduced. It is said, in substance, in the brief for appellant, that the solution is odorless at that time, but that it contains "an impurity of unknown constitution" which makes its presence known by emitting an obnoxious odor a considerable time after manufacture of the ultimate product has been completed.

[1], [2] The brief for appellant is quite elaborate and to a considerable extent repetitious. We have studied it carefully together with the affidavits of Messrs. Toone and Snell filed in support of the teachings of the specification. We are not convinced, however, that appellant's contribution to the art presents patentable subject matter. The characteristics of active carbon as an adsorbent of color and odor in various solutions and substances being well known, it does not seem to us that invention was required to apply it to solutions while they were in the liquid stage (which is a stage incident to the manufacture of the eventually dried alkyl aryl [or benzene] sulfonates) for the purpose of retarding for a time the development of an unpleasant odor.

A question of res judicata was injected into the case. The Examiner in an early office action held the question to have been adjudicated in the rejection of an earlier application by appellant, but it was not set forth in the Examiner's statement following the appeal to the Board, nor was it mentioned in the Board's decision. It is at least questionable whether the rule was actually relied upon in the final disposition of the case by the Board and in view of our conclusion on the merits it is unnecessary to our decision to pass upon that question.

The decision of the Board of Appeals is affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE SMITH

No. 5575. Decided April 12, 1949

[— F.2d —; 81 USPQ 393]

PATENTABILITY—PARTICULAR SUBJECT MATTER—ELECTRICAL HEATING UNITS.

Certain claims to an electric heating unit and method of producing a cover for such unit *Held* properly rejected as unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 435,567.

AFFIRMED.

Clyde A. Norton and *M. Theodore Simmons* (*Eugene C. Taylor* of counsel) for Smith.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

JACKSON, *J.:*

The Primary Examiner of the United States Patent Office rejected as unpatentable over the prior art, article claims 1 to 4, inclusive, 6, and 7, and method claim 5 of an application for a patent for "Electrical Heating Units," Serial No. 435,567, filed March 20, 1942. The Board of Appeals affirmed the decision of the Examiner. From that decision, this appeal was taken.

The prior art relied on is as follows: Ashbaugh, 428,443, May 20, 1890; Steinhardt, 1,442,910, January 23, 1923; Lightfoot, 1,617,489, February 15, 1927; Beck et al., 2,060,968, November 17, 1936; Adams, 2,107,924, February 8, 1938.

Appellant's motion to dismiss the appeal as to claim 1 will be granted.

The Primary Examiner in addition to the rejection of the claims as unpatentable over the prior art, also rejected them as unpatentable over an issue decided by the Board in appeal No. 38,411, which involved the abandonment of application No. 182,711 of the same appellant. The Board of Appeals did not sustain that rejection.

Claims 2 and 5 are illustrative of the involved subject matter and read as follows:

> 2. An electric heating unit having a metal body cast directly about a core comprising a solid rod of ceramic dielectric disposed in contiguous layers forming substantially a vertical helix, the rod having embedded therein a spirally wound resistance wire filament with attached terminals, which latter project outwardly from said helix, the walls of the body outside the core being thin, and a well in the body extending from the top thereof downwardly and near to the core.
>
> 5. The method of producing a core for an electric heating element which consists in spirally winding the resistance wire with separated loops, surrounding and filling the spiral with plastic ceramic dielectric, arranging the coated spiral in substantially a helix with contiguous layers and with the ends projecting outwardly from the helix, and firing the core to fix its shape and to drive off gases therefrom.

The application relates to electrical heating units used in coffee percolators and similar devices. The method involved, as may be observed from a reading of claim 5, has relation to the production of what is called the "core" of the device. The quoted claims are readily understandable and require no further description.

The patent to Ashbaugh relates to an electrical heater. It discloses resistance wires through the middle of fire-clay block or the like, which is placed about the wires. The block is then dried, baked, and encased in a metallic jacket.

The Steinhardt patent relates to electrically heated vessels made of ceramic material and a method for making them. It discloses a cup-like structure at the bottom of which the heating means is situated. There is disclosed in the structure a helical groove in which is placed the conducting wire. Then the wire is covered with ceramic material which "should not be too wet" and the article is baked.

The Lightfoot patent provides for electrically heated devices and a method of their manufacture. There is disclosed in the patent a heating element comprising a helical resistor enclosed in a tubular metal jacket from which it is thoroughly insulated. The patent discloses a method of making the heating device which consists in winding a heating element in helical form around a metal pipe. A metallic shield is then cast onto the pipe section to provide a covering. The type of heating element used is defined by reference to an earlier Lightfoot patent, No. 1,359,400, dated November 16, 1920. The drawings in that patent disclose a helical resistor insulated from a metallic jacket. The insulation, which is in granular form, is poured into the jacket and compacted after the resistor has been inserted, thus insulating the resistor from the jacket and also each turn of the resistor wire from the other turns. The resistor may be bent into various forms, one of the forms shown in the drawings being helical.

The Beck et al. patent relates to an electrical heating device and a method for making it. It is stated that one of the objects of the patent is a method for producing a heating device by applying an insulating coating to a resistor wire, then hardening the coating and embodying the resistor wire thus coated in a cast metal. There is disclosed a coating over the resistor wire of ceramic material, which may be applied in liquid or semi-liquid form. The insulation material is hardened and then the resistor, coated with the hardened ceramic material, is cast within the metal material. It is said that in making the unit of the patent, the wire will first be formed into its desired shape, then given its ceramic insulation, and after the insulation has hardened, a metal casting is made around the insulated wire by conventional methods. The drawings of the patent disclose the insulated wire in helical form and laid in a groove.

The patent to Adams has reference to coffee-making utensils, particularly those of the "drip" type. In that type of coffee making, water at a substantially boiling temperature passes through the ground coffee. The device of the patentee discloses a helical resistance element surrounded by insulating material. The element with its surrounding material is bent into circular form and imbedded in the heating chamber, which is of cast metal.

The Primary Examiner rejected the article claims as unpatentable over the patent to Beck et al. in view of the Adams patent. The latter patent was relied upon as anticipating the "well" of the involved claims with the "thin wall" limitation heated by a "cast-in" resistor-heating unit. The Examiner stated that the Beck et al. patent discloses "hardened ceramic" enclosed in a metallic casting. He held that it would not be inventive to use the ceramic insulated coil of the Beck et al. patent in place of the equivalent ring shaped heating unit of the Adams structure. Those claims were further rejected as unpatentable over the Lightfoot patent in view of the patent to Beck et al. With respect to this rejection, the Examiner stated that the patent of Lightfoot, while disclosing much the same features as the Adams structure, had a clearer showing of a helix.

Method claim 5 was considered by the Examiner to be anticipated by each of the Beck et al., Ashbaugh, and Steinhardt patents.

In our opinion there is a clear disclosure of all of the elements of the rejected claims in the prior

art. The insulation coating of the Beck et al. device is not necessarily applied in liquid form, as is stated in the brief of appellant. The coating may be, as has hereinbefore been set out, in a semi-liquid form. That form, in our opinion, is the same as the form of ceramic used by appellant.

The electric conductor of the Beck et al. device is specifically disclosed as having its surface bonded with a solid coating of ceramic substance, and, therefore, it seems to us that there is no patentable novelty in the solid core construction claimed by appellant.

It is not new, as shown in the structure of the Ashbaugh reference, to fill the spaces between the spirally wound resistor wire with insulation. In that patent it is shown that fire-clay is pressed over the wire. In the structure of the Steinhardt patent, ceramic material fills out the space in which the resistor wire is wound in helical fashion. Therefore, we can not agree with the contention of appellant with respect to the lack of disclosure of filling with ceramic material the spaces between the wound wire.

Contrary to the statement of counsel for appellant that the Beck et al. patent does not disclose plastic material, it is stated in the specification of that patent that the insulation may be of "ceramic cement," which hardens and certainly may be moulded to any desired form.

Counsel for appellant lays great stress upon the assertion that the structure of the Beck et al. device does not disclose contiguous layers. That may be true enough, but we believe, as did the Board, that it does not involve invention to wind the core of the Beck et al. device to form a vertical helix if it were so desired, and whether or not the loops of the helical structure are contiguous, to our way of thinking, is a matter of choice. Neither claim 6 nor 7 contains any limitation with respect to contiguous layers. Furthermore, while a dictionary definition of the word "contiguous" means "things that are in actual contact," nevertheless, it is also defined as meaning, "also, near; though not in contact, neighboring • • •." It would have been a simple matter, if appellant considered the contiguity of the rolls in his helical core to be of such a nature as to lend patentability to the claims, to have so stated.

It is clear to us that the structure disclosed in the Beck et al. patent does disclose a helix. In fact it is so stated in the specification.

With respect to method claim 5, the method shown in the patent of Beck et al. provides for the winding in spiral fashion of a resistance wire in separate loops. The wire so wound is surrounded with plastic ceramic. The spirals appear to be quite close to each other, and when the core has been made it is hardened. It is true that the heating element means of that patent appears to be in spiral rather than helical form, but we agree with the reasoning of the Board that in view of the devices of the Steinhardt structure or the Lightfoot structure, such difference is of no patentable significance. The firing step in the method claim is disclosed in the method of the Steinhardt patent wherein the heating core is said to be a conductor surrounded by a protective layer of ceramic material, having its fusing temperature reduced by adding fluxing media thereto, and then baked at a reduced temperature.

We find no error in the decision appealed from. The motion to dismiss the appeal as to claim 1 is granted, and the decision of the Board of Appeals, as to the other claims, is affirmed.

AFFIRMED.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,403,011. AUTOMATIC FREQUENCY CONTROL CIRCUIT. Patented July 2, 1946. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) In this automatic frequency control circuit, voltage from a discriminator is applied through a unilateral conducting device to a sound frequency control circuit, whereby control is rapidly applied and maintained between signals. (Owner) Edward F. McClain, Jr., 4089 Minnesota Ave., N. E., Washington 19, D. C. Group 36—19—61—62. Reg. No. 19,690.

Pat. 2,430,476. PHONOGRAPH REPRODUCER. Patented Nov. 11, 1947. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) This patent shows phonograph pick-ups of the dynamic type comprising a permanent magnet, a moving coil positioned in the field, and a thin flexible wire which supports the coil and stylus. The stylus is rigidly fastened to the wire, and the coil is wound around the upper end of stylus where it is fastened to the wire. An anti-resonant damper may be secured on top of the stylus and coil. In operation, deflection of the stylus produces torsional displacement of the wire and rotational displacement of the coil with respect to the field. Modifications show both vertical and lateral pick-ups. (Owner) Edward F. McClain, Jr., 4089 Minnesota Ave., N. E., Washington 19, D. C. Group 36—61. Reg. No. 19,691.

Pat. 2,434,644. SOUND WAVE DIRECTION DETERMINATOR. Patented Jan. 20, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Provides apparatus for indicating the direction of the source of an acoustic shock wave whereby the source may be quickly located. The patent shows the use of five microphones with four arranged at the quadrantal points of a circle and the other at the center of the circle to successively intercept advancing shock waves. The shock wave reaching the first microphone charges a condenser, and upon reaching the second microphone charges a second condenser. When it reaches the third or center microphone, it stops the charging of the condensers and disconnects remaining condensers from their microphones. A moment later the condensers are connected to discharging circuits. Voltage is then applied from the condensers to the oscilloscope, and the azimuth shown on the screen. (Owner) Robert W. Fairweather, 318 Colony St., West Hempstead, New York, N. Y. Group 36—62. Reg. No. 19,692.

Pat. 1,945,526. AUTOMATIC DRY CONCENTRATOR. Patented Feb. 6, 1934. Machine is especially adapted for separating fine particles of metals and minerals from milled ores and clay, "dry." It is a dry table with a movement that causes the valuables to climb up-grade out of the dirt or milled ore. It separates any metals with a gravity heavier than the body of the ore and dirt. For example: gold, silver, lead, tungsten, etc. Inventor claims it gets a higher recovery dry than wet, and that he has recovered fine tungsten from garnet tailings that were thrown away. (Co-owner) J. F. Gibson, 638 Del Rosa Ave., San Bernardino, Calif. Group 35—33. Reg. No. 19,693.

United States Government Owned Patents

The following 28 patents are assigned to the United States of America as represented by the Secretary of Agriculture. Licenses to practice the inventions are issued on a royalty-free, non-exclusive, non-transferable, revocable basis. Applications for licenses should be addressed to the Bureau of Agricultural and Industrial Chemistry, U. S. Department of Agriculture, Washington 25, D. C.

Pat. 2,433,866. METHOD OF MAKING FURFURYL ACRYLATE. Patented Jan. 6, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Furfuryl acrylate is produced by reacting methyl acrylate with furfuryl alcohol. The product is a polymerizable material which on copolymerization with other esters of acrylic acid yields harder, tougher polymers which are more resistant to the action of organic solvents. Group 28—83. Reg. No. 19,694.

Pat. 2,438,208. CONTINUOUS PROCESS OF CONVERTING LACTIC ACID TO POLYLACTIC ACID. Patented Mar. 23, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A continuous distillation process for the concentration of aqueous lactic acid and its dehydration to polylactic acid. The process can be operated to produce concurrently polylactic acid and aqueous solutions of high quality lactic acid. Group 28—89. Reg. No. 19,695.

Pat. 2,438,278. METHOD FOR AZEOTROPIC DISTILLATION OF ACETIC ANHYDRIDE. Patented Mar. 23, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Petroleum hydrocarbon fractions or cyclic hydrocarbons such as methyl or ethyl cyclohexane are used as entraining agents in the recovery of acetic anhydride from solutions that are difficult to fractionate by ordinary distillation. The components of the constant boiling mixture of acetic anhydride and the entraining agent, obtained on distillation, are separated by stratification. Group 28—61. Reg. No. 19,696.

Pat. 2,440,349. PROCESS FOR PREPARING AN ALKYLOLAMIDE OF A TRIHYDROXYSTEARIC ACID. Patented Apr. 27, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A trihydroxystearic acid is reacted with an alkylolamine with continuous removal of the water formed in the reaction. The products, which are the corresponding alkylolamides of the acid, are efficacious solubilizing and emulsifying agents. Group 28—89. Reg. No. 19,697.

Pat. 2,440,383. SYNERGISTIC ANTIOXIDANT COMPOSITION OF THE ACIDIC TYPE. Patented Apr. 27, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Antioxidant compositions for inhibiting the rancidity of oleaginous materials. The active ingredients comprise phospholipides such as commercial lecithin and an ascorbyl ester of a fat acid. Group 28—89. Reg. No. 19,698.

Pat. 2,440,554. PROCESS FOR THE RECOVERY OF RUBBER IN PLANTS BY FERMENTING WITH CLOSTRIDIUM. Patented Apr. 27, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) The rubber contained in the leaves of cryptostegia vines, which cannot be recovered by tapping the latex system of the plant or by mechanical disintegration of the leaves, is recovered by fermenting the leaves with organisms that digest the

cell walls and separating the rubber particles as a latex after treating the screened, fermented material with alkali. Groups 28—83; 30—52. Reg. No. 19,690.

Pat. 2,440,781. INSECTICIDAL FUMIGANT COMPOSITION WITH SOLID RUBBER CARRIER PARTICLES. Patented May 4, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A volatile liquid insecticidal agent such as ethylene dichloride is absorbed on finely divided hard rubber. The product used as a dust permits uniform application of the toxicant without injury to the plant, and induces prolonged fumigating action. Solid insecticides such as p-dichlorobenzene can also be included by dissolving them in the liquid agent. Group 28—33; 30—32. Reg. No. 19,700.

Pat. 2,443,280. HYDROXYLATION PROCESS. Patented June 15, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Alpha-glycols are produced in substantially quantitative yields by reacting monoolefinic aliphatic hydrocarbons, hydroxy compounds, esters or acids, for instance oleic acid, with substantially an equimolecular amount of hydrogen peroxide in admixture with acetic acid. The products are valuable intermediates in the production of synthetic plastics and other materials. Group 28—61—83—80. Reg. No. 19,701.

Pat. 2,443,897. PROCESS FOR THE PRODUCTION OF SWEETPOTATO STARCH. Patented June 22, 1948. Patent relates specifically to a rapid, efficient, and continuous method for extracting starch from sweetpotatoes. Pectins and similar substances, solidified with lime water, remain in the pulp; solubles are removed with a continuous centrifuge; and starch is separated by means of a countercurrent screening system. The pulp is pressed and dried, and the starch purified in a series of three continuous centrifugals. Colored compounds then are destroyed with sodium hypochlorite, the salts formed in this stage being eliminated by washing on a continuous filter. Finally, the starch is de-watered by means of a perforated basket centrifugal and dried with a suitable rotary drier. Process may be applicable to the production of other root starches. Group 20—94. Reg. No. 19,702.

Pat. 2,444,064. METHOD OF TREATING TIRE CORDS. Patented June 29, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Describes a process for producing tire cord combining high strength with any desired elongation. The strength is obtained by wetting the cotton with a suitable liquid and stretching it at high temperature so that it is stretched and dried simultaneously. This step produces a strong cord with low elongation. The cord is then re-wet and stretched without heat, the tension of the second swelling process being so regulated as to produce whatever elongation is desired in the finished cord. Groups 22—11—13; 30—11. Reg. No. 19,703.

Pat. 2,445,084. PLASTICIZED ETHYL CELLULOSE COMPOSITION. Patented July 13, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A synthetic resin comprising ethyl cellulose and a polymerized ester of acrylic acid and containing as a plasticizing agent an allyl or methallyl lactate ester of a dicarboxylic acid. These plastic compositions are strong and flexible over a wide temperature range. Group 28—83. Reg. No. 19,704.

Pat. 2,445,085. PLASTICIZED COMPOSITION CONTAINING A CELLULOSE ETHER AND A POLYACRYLIC ACID ESTER. Patented July 13, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A synthetic resin comprising a polymerized ester of acrylic acid and a cellulose ether and containing as a plasticizer a polyhydric alcohol ester of a saturated hydroxy acid, for instance glyceryl lactate or a glycol lactate. These plastic compositions are strong and flexible over a wide temperature range. Group 28—83. Reg. No. 19,705.

Pat. 2,445,892. AMINO FATTY DERIVATIVES. Patented July 27, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) 9, 10-Epoxystearic acid or 9,10-epoxyoctadecanol are reacted with aqueous ammonia or amine to form the corresponding derivative containing a hydroxyl and an amino group on the 9 and 10 carbon atom. The water-soluble products are surface active compounds. Group 28—89. Reg. No. 19,706.

Pat. 2,445,911. PROCESS OF ACETYLATING TRIETHYL CITRATE. Patented July 27, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Acetylated triethyl citrate is produced by a continuous process wherein triethyl citrate is reacted with acetic anhydride, and acetic acid is distilled from the reaction mixture. Groups 28—89; 30—22. Reg. No. 19,707.

Pat. 2,445,925. ACRYLIC ESTERS OF SECONDARY ALCOHOLS. Patented July 27, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Acrylic esters of secondary alcohols are produced with good yields by reacting the secondary alcohol with a molar excess of a lower alkyl acrylate and removing the alkylol formed in the reaction by azeotropic distillation with the alkyl acrylate. Group 28—61. Reg. No. 19,708.

Pat. 2,446,116. PROCESS OF PURIFYING CAROTENE CONTAMINATED WITH CHLOROPHYLL AND XANTHOPHYLL. Patented July 27, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Carotene substantially free of other plant pigments is obtained by treating a solution produced by extracting green plant material with a low boiling hydrocarbon solvent, with a solid adsorbent such as hydrated lime, thereby removing chlorophyll and xanthophyll by adsorption. Group 28—31. Reg. No. 19,709.

Pat. 2,447,093. PROCESS FOR THE MANUFACTURE OF ESTERS OF HYDROXY CARBOXYLIC ACIDS. Patented Aug. 24, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Unsaturated esters of hydroxycarboxylic acids, for instance allyl lactate, are produced by reacting the acid with a polyhydric alcohol, such as glycerol, and then reacting the condensation product with the unsaturated alcohol. Group 28—89. Reg. No. 19,710.

Pat. 2,448,153. PROCESS OF MAKING COTTON TEXTILES WATER-ABSORBENT AND ROT-RESISTANT. Patented Aug. 31, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Covers a process which should be useful in producing articles, such as toweling, which need to be highly absorbent, or articles which require rot-proofing. Cotton textiles are impregnated with chloro-acetic acid, then treated with an alkali metal hydroxide such as sodium hydroxide of concentration between 20% and 50%. This gives a swellable, water-absorbent fabric having approximately one carboxymethyl group per 40 to 5 glucose units. The fabric may subsequently be treated with a solution of a salt of a metal, such as copper or mercury, which produces a non-soluble metal salt of the carboxymethyl groups on the textile. This latter treatment renders the fabric rot-resistant. Group 22—11. Reg. No. 19,711.

Pat. 2,448,175. EXTRACTION OF RUTIN. Patented Aug. 31, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Impurities consisting mainly of plant fats and resins are removed from extracts of rutin-bearing plant materials by boiling the extract with water in amount sufficient to dissolve the rutin, thereby causing coalescence of the impurities, which are then removed by filtration. Group 28—31—89. Reg. No. 19,712.

Pat. 2,448,626. ALKYLOL AMINE SALTS OF HYDROXY FATTY ACIDS AND PROCESS FOR THEIR PREPARATION. Patented Sept. 7, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Alkylol amine salts of saturated higher hydroxy fatty acid such as a hydroxystearic acid. The products obtained by reacting the acid with an aqueous solution of the alkylol amine are efficacious stabilizing and emulsifying agents. Group 28—89. Reg. No. 19,713.

Pat. 2,448,873. PHENOXYETHYL LACTATE AND A CELLULOSE COMPOUND PLASTICIZED THEREWITH. Patented Sept. 7, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Polylactic acid esters of phenoxy- and alkylphenoxy-ethanol. These compounds are valuable plasticizers for synthetic resins and especially for cellulose derivatives. Group 28—83—89. Reg. No. 19,714.

Pat. 2,449,215. METHOD OF PRODUCING COTTON CORDAGE. Patented Sept. 14, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G 757.) Relates to heat-resistant tire cord produced by a modified process of mercerization. The method, which is suitable for producing cotton reinforcing cord for pneumatic tires, power belts, etc., is briefly as follows: Ordinary cotton is formed into a yarn of minimum practical spinning twist; the yarn is treated with an alkali hydroxide in a concentration of about 20% to 25% by weight while allowing the yarn thus treated to shrink about 15% in length so as to permit maximum swelling of the cotton; residual alkali is washed out with a non-acid aqueous medium; the yarn is dried and twisted into cord, regaining most of its original length by tension applied during the twisting. Groups 22—13—98; 30—11. Reg. No. 19,715.

Pat. 2,449,533. SYNERGISTIC INSECTICIDAL COMPOSITIONS. Patented Sept. 14, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Insecticidal compositions comprising a compound of nicotine and phthalonitrile as a synergist therefor. Group 28—83. Reg. No. 19,716.

Pat. 2,449,612. SYNTHETIC RUBBERLIKE MATERIALS. Patented Sept. 21, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A process for copolymerizing alkyl acrylate with allyl lactate, maleate and converting the copolymer to rubberlike products by vulcanization. Group 28—83. Reg. No. 19,717.

Pat. 2,449,816. PLASTIC MATERIAL FROM ALLYL STARCH. Patented Sept. 21, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) Allyl ether of starch compounded and cured with sulfur. The vulcanizates may be obtained in any degree of hardness up to that of hard rubber. Group 28—83. Reg. No. 19,718.

Pat. 2,452,092. RUBBERLIKE PRODUCT AND PROCESS OF PREPARATION. Patented Oct. 26, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) High molecular weight polymers are produced by auto-esterification of a mixture of substantially pure ricinoleic and monohydroxystearic acids. Group 28—83. Reg. No. 19,719.

Pat. 2,452,209. CELLULOSE ETHER PLASTICIZED WITH BIS (ALLYL LACTATE) MALEATE. Patented Oct. 26, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A cellulose ether plasticized with bis (allyl lactate) maleate. These plastic compositions are flexible at low temperatures. Group 28—83. Reg. No. 19,720.

Pat. 2,453,858. PROCESS FOR OBTAINING RUBBER FROM GOLDENROD LEAVES. Patented Nov. 16, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A process for producing a usable rubber from goldenrod leaves is described. Briefly, this process consists of decomposing the plant material with micro-organisms to reduce the bulk weight by 29.6% to 41.6%. The remaining concentrated plant material is then treated with a resin solvent to remove the resins, followed by a rubber solvent to extract the rubber. The resulting rubber solution is purified by precipitating the rubber by the addition of acetone, and filtering or decanting to recover the rubber. Tests have shown that the final vulcanized rubber is comparable to existing rubbers on the market. Group 30—52. Reg. No. 19,721.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING APRIL AND MAY, 1949

Ex parte The Adler Company, 171 Ms. D. 256, 81 USPQ 71 (Apr. 1, 1949). Trade-Mark Division may not insist upon elimination of an allegation asserting ten years' exclusive use preceding the enactment of the 1905 act, if applicant insists upon basing his application on that proviso although the mark may be registrable under the 1905 act without such reliance.

A request for interference with some, but not all, prior registrations cited by the Office should be interpreted by inference to include all marks which the Patent Office regards as pertinent and which have not expired.

DANIELS, *Assistant Commissioner:*

This is an appeal from the final refusal to register a trade-mark for "knitted socks," under the Trade-Mark Act of 1905. The mark sought to be registered consists of the word "EAGLE," and the application contains a claim of continuous, actual and exclusive use of the mark as a trade-mark for ten years prior to February 20, 1905, in accordance with the ten-year proviso of section 5 of the Trade-Mark Act of 1905. Registration has been refused in view of the inclusion of such statements of use during the ten-year period which are said to be unnecessary, and in view of several prior registrations of trade-marks under that act for various articles of wearing apparel. Applicant appeals from the refusal because of the inclusion of such statements of use prior to 1905, and, because of the failure to declare an interference with certain of the prior registrations. The grounds for appeal do not include that of refusal to register because of the prior registrations, and each of them must therefore stand as references requiring refusal of registration in the absence of interference proceeding.

In setting up the prior registrations, the Examiner pointed out that, in view of the date of use alleged, applicant was entitled to a declaration of an interference, if it "so desires and requests." After other proceedings, the applicant requested interference with certain of such prior registrations, but excluded certain others from the request. In response to this request, the Examiner pointed out that all cited references stand as a bar to the registration sought and not merely those selected by applicant. The Examiner stated that interference proceedings should be initiated only upon the expressed request of applicant, pointing out that "the Patent Office cannot encourage litigation by automatically declaring an interference each time this particular combination of circumstances arises." Such action puts other parties (the owners of other registrations or applications) to trouble and expense and unless an applicant clearly indicates that it is prepared to further prosecute the application to the extent necessary for contested proceedings should not be declared. Applicant, in failing to request interference with the specific registrations omitted from its request, argued that they were not proper references in that there was no similarity between the mark disclosed in its application and those of such registrations, and apparently for this reason would not specifically request interference therewith. Applicant has, however, specifically requested that an interference be declared. While, in so doing, it may not exclude references which stand as a bar to his registration, neither does it seem necessary that it make a request which might possibly be interpreted as conceding similarity between its mark and the marks of the registrations referred to. While this stand is perhaps of a technical nature, it would appear that, considering the entire tenor of the papers involved in the prosecution of this application, and particularly in view of the filing of this appeal, the applicant has not only specifically requested that an interference be declared, but at least by inference that it include all marks which the Patent Office regards as pertinent. Since all of the registrations cited stand as references requiring refusal of the registration in the absence of the successful prosecution of an interference by applicant, this necessarily requires that all registrations cited be included. It is accordingly believed that the applicant has complied with the requirements of the Examiner, and that it is entitled to declaration of an interference which would include all prior registrations which the Examiner may consider pertinent, excluding, of course, certain registrations which may have expired since the last action by the Examiner, in the event they have not been renewed.

The refusal to register in view of the inclusion of the claim of exclusive use for ten years next preceding the enactment of the Trade-Mark Act of 1905 is apparently based upon the fact that such claim is unnecessary and accordingly the language constitutes mere surplusage.

Unnecessary material which has no bearing upon applicant's rights should not be included in an application. In this case, the Examiner has found that the mark presented is an arbitrary one which may be registered without such showing. The precise reasons for applicant's insistence upon retaining it is not apparent from the papers before me. It cannot affect the refusal of registration over prior registrations, and would ordinarily relate only to marks coming within the other clauses of section 5 of the act, such as marks which are descriptive, geographical, or consist only of surnames. *Thaddeus Davis Company* v. *Davids Mfg. Co.*, 233 U. S. 461, 1914 C. D. 367. The Examiner having indicated that the inclusion of this language is unnecessary to obtain registration (apart from the question of prior

registrations) a conclusion with which I agree, there seems little necessity for retaining the clauses referred to. It may be, however, that applicant is aware of facts which require inclusion of these statements which are not apparent from the record or for other reasons feels that it is not entitled to registration in the absence of a showing of such early use. If the applicant elects to apply for a registration based upon such early use, even though this may not be considered necessary, it would appear that it is entitled to make such claim. The Examiner having pointed out that the statements are unnecessary appears to have performed his full duty and if the applicant insists upon the inclusion, it cannot be said with certainty that they are merely surplusage.

Should further developments in any interference proceeding, which may be instituted, show that others had used similar marks for similar products during the critical ten year period, a different situation may be presented. But until such a situation actually arises it is useless to speculate on what action might then be required.

In view of the foregoing, this application is remanded to the Examiner of Trade-Marks for further action in accordance with the foregoing, and the final refusal to register is modified to the extent indicated.

In the following case, the opposition was sustained by DANIELS, *Assistant Commissioner.*

Sharp & Dohme, Incorporated v. *Jacques Morel*, 171 Ms. D. 297, 81 USPQ 288 (May 2, 1949), Opposition No. 26,121. The word "HEPATION" as a trade-mark for "pharmaceutical products, namely, medicinal preparations for treating disorders of the liver, the kidneys, the intestines, and for treating arthritis and menstrual conditions and for treating excessive uric acid" under the act of 1905 held unregistrable in view of opposer's ownership and prior registration of the trade-mark "HEPATONE" for "effervescent sodium-phosphate compound."

In the following cases, the opposition was dismissed by DANIELS, *Assistant Commissioner.*

The Crown Overall Mfg. Co. v. *Bee-Bee Frocks, Inc.*, 171 Ms. D. 302, 81 USPQ 289 (May 4, 1949), Opposition No. 26,055. A mark consisting of a pictorial design of a grotesque or fanciful figure described by the applicant as "consisting of an animated honey bee having a small crown on its head," held registrable under the act of 1905 for "children's garments in the nature of pinafores, dresses and sun suits," over the opposition by the owner of the trade-mark "Crown," both the word and the symbol, which had been previously registered for various articles of clothing and wearing apparel. It was held that the picture of the crown was merely an incidental decorative feature of the applicant's mark which was dominated by the bee or queen bee motif.

H. M. Sinclair, Jr. v. *American Hospital Supply Corporation*, 171 Ms. D. 313, 81 USPQ 408 (May 17, 1949), Opposition No. 24,105. The word "Chieftain" as a trade-mark under the act of 1905 for "hypodermic needles, syringes, surgical rubber gloves, rubber tubing for intravenous solutions, rubber-coated sheeting for hospital beds, and cotton-tipped applicators," held registrable over opposer's prior use and ownership of the identical word as a trade-mark for "bleaching, deodorizing and disinfecting preparations, particularly chlorinated lime."

In the following case, the opposition was dismissed, but the mark was held unregistrable, ex parte, by DANIELS, *Assistant Commissioner.*

Nancy Ann Storybook Dolls, Inc. v. *Julia Culbreth Gray*, 181 Ms. D. 300, 81 USPQ 291 (May 4, 1949), Opposition No. 26,324. The notation "Bible Story" held unregistrable for dolls and doll clothing on the ground that these words are generically descriptive of the goods involved.

In the following cases, the marks were held unregistrable ex parte on appeal from the Examiner of Trade-Marks by DANIELS, *Assistant Commissioner.*

Ex parte Air-Flight Shoe Company, Incorporated, 171 Ms. D. 299, 81 USPQ 289 (May 3, 1949). The notation "AIR-FLIGHT" as a trade-mark for shoes under the 1905 act refused registration in view of a prior registration under the same act of the mark "Flight by Customcraft," for shoes, the word "by" being disclaimed.

Ex parte Columbia Protektosite Co., Inc., 171 Ms. D. 298, 81 USPQ 287 (May 2, 1949). The word "STANDEE" for use as a trade-mark for "hair combs adapted to rest upright on their broadened backs" under the act of 1905 held unregistrable in view of prior registration of the trade-mark "Dandee" for "combs not made of precious metal."

In the following case, the decision of the Examiner of Trade-Marks refusing registration under the act of 1920 was reversed by DANIELS, *Assistant Commissioner.*

Ex parte Art & Sign Brush Mfg. Corp., 171 Ms. D. 307, 81 USPQ 316 (May 11, 1949). The word "FINE-POINT" for paint brushes held registrable under the act of 1920 and not to be so completely descriptive of a style of brush as to be incapable of any significance whatever as an indication of origin.

In the following case, a petition for cancellation was dismissed by DANIELS, *Assistant Commissioner.*

Goodall-Sanford, Inc. v. *The Landers Corporation*, 171 Ms. D. 304, 81 USPQ 291 (May 5, 1949), Cancellation No. 4817. The word "PALMTEX," together with a representation of a glove or gauntlet

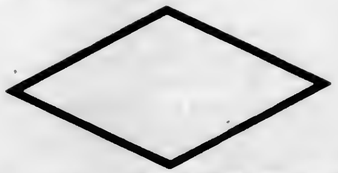
displayed with the palm forward, as a trade-mark for "treated cotton textile piece goods for use in making work gloves," held not subject to cancellation on the ground of petitioner's two registrations of the trade-mark "PALM BEACH" together with representations of palm branches, and of the trade-marks disclosed therein for "woolen piece goods" and "woolen piece goods, mohair piece goods, and piece goods of combinations of cotton, wool, mohair, alpaca, camel hair, silk and artificial silk." Respondent filed a counterclaim seeking cancellation of petitioner's marks which was likewise dismissed.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 28, 1949

[VOL. 623. No. 4]

ACT OF 1905



The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 510,490. DIAMOND ALKALI COMPANY, Cleveland, Ohio. Filed Oct. 9, 1946.

FOR CHEMICAL PREPARATIONS TO BE USED WITH WELL DRILLING FLUIDS TO ENHANCE THE DRILLING CHARACTERISTICS OF WELL DRILLING MUDS, SAID PREPARATIONS BEING ADAPTED FOR MIXING WITH THE SOIL WHEN DRILLING.

Claims use since June 19, 1946.

Ser. No. 513,144. WILLIAM R. WARNER & CO., INC., Wilmington, Del., and New York, N. Y. Filed Nov. 23, 1946.

Thera-Multi-Vita

The words "Multi" and "Vita" are disclaimed. Applicant owns Reg. No. 406,197.

FOR VITAMIN COMPOSITION.

Claims use since Oct. 23, 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 511,462. GENERAL CONTROL COMPANY, Boston, Mass. Filed Oct. 25, 1946.

Promatic

FOR PANELS OF ELECTRONIC AND/OR ELECTRO-MECHANICAL SEQUENCE TIMERS, CIRCUITS THEREFOR AND RELAYS AND CONDENSERS USED THEREWITH DESIGNED FOR THE PURPOSE OF CONTROLLING THE OPERATION OF VARIOUS INDUSTRIAL EQUIPMENT AND PROCESSES; ELECTRONIC AND/OR ELECTRO-MECHANICAL SINGLE OR SEQUENCE TIMERS AND SWITCHES.

Claims use since June 19, 1946.

Ser. No. 513,919. THE VITRON CORPORATION, Wilmington, Del. Filed Dec. 7, 1946.

Vitron

FOR ELECTRICAL INSULATION MATERIALS WHICH CONTAIN GLASS FIBERS AND GLASS WOOL—NAMELY, GLASS FIBROUS ELECTRICAL INSULATING TAPE, TUBES MADE OF GLASS FIBERS AND IMPREGNATED WITH VARNISH, AND LAMINATED MATERIALS COMBINED OF LAYERS OF MICA SEPARATED BY A LAYER OF GLASS FIBERS IN THE FORM OF SHEETS, TUBES, CONES, AND OTHERS MAINLY FOR ELECTRICAL INSULATION PURPOSES.

Claims use since Oct. 30, 1946.

Ser. No. 523,202. FUSITE CORPORATION, Cincinnati, Ohio. Filed May 28, 1947.

FUSITE

FOR HERMETICALLY SEALED TERMINAL PANELS USED IN CONJUNCTION WITH CAN AND OTHER TYPE CLOSURES FOR HOUSING ELECTRICAL AND ELECTRONIC APPARATUS SUCH AS CONDENSERS, COILS, ETC.

Claims use since Dec. 1, 1944.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 522,372. ROKWELL INDUSTRIES, INC., Clayton, Mo. Filed May 14, 1947.

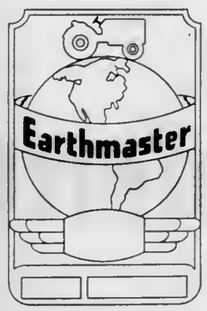
Model Mag

No claim is made to the word "Model" alone.

FOR PACKAGED MATERIALS TO BE USED IN THE CONSTRUCTION OF TOY MODEL AIRCRAFT AND OTHER TOYS.

Claims use since Aug. 23, 1946.

CLASS 23



CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 503,502. THE DE LAVAL SEPARATOR COMPANY, New York, N. Y. Filed June 8, 1946. Under section 5b of the act of 1905 as amended in 1920.

The drawing is lined for shading only. No claim is made for the word "Separator" apart from the mark.
FOR CENTRIFUGES OTHER THAN CREAM SEPARATORS.
Claims use since Apr. 27, 1946.

Ser. No. 506,150. AERCO CORPORATION, Hollydale, Calif., assignor to Adel Precision Products Corp., Los Angeles, Calif., a corporation. Filed July 24, 1946.

The representation of the tractor is disclaimed apart from the mark.
FOR FARM TRACTORS AND A PRESSURE TYPE MIXING MACHINE OR APPLICATOR CONTAINING A MIXING CHAMBER AND SPRAY HEADS WHICH APPLY MOLASSES TO LIVESTOCK FEEDS.
Claims use since Apr. 15, 1946.

Ser. No. 524,171. BETTER-BILT MANUFACTURING COMPANY, Minneapolis, Minn. Filed June 14, 1947.

CULTI-LEVELER

The word "Leveler" is disclaimed apart from the mark.
FOR GROUND ENGAGING DRAG ROD UNITS USED AS AN ATTACHMENT WITH CULTIVATORS.
Claims use since Apr. 1, 1946.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 496,939. ACADEMY AWARD PRODUCTS, INC., New York, N. Y. Filed Feb. 20, 1946.

ACADEMY AWARD

FOR MOTION PICTURE MACHINES, BOTH SILENT AND SOUND, AND EQUIPMENT, APPARATUS, AND ACCESSORIES RELATING THERETO—NAMELY, 35 MM, AND 16 MM PROJECTORS, 8 MM PROJECTORS, MOTION PICTURE CAMERAS, SLIDE FILM PROJECTORS, COIN OPERATED PROJECTORS, CONTINUOUS PROJECTORS, CABINETS FOR PROJECTORS, STANDS FOR PROJECTORS, CARRYING CASES FOR PROJECTORS, FILM REELS, FILM SPLICERS, REEL CANS, PROJECTOR LENSES, UNEXPOSED MOTION PICTURE PHOTOGRAPHIC FILMS, NEGATIVE AND POSITIVE, BLACK-AND-WHITE AND COLORED, MOTION PICTURE SCREENS, COIN CHANGERS AND PAYERS.
Claims use since Feb. 6, 1946.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 519,607. TRANSPARENT PRODUCTS CO., INC., New York, N. Y. Filed Mar. 26, 1947.

PERMA-NAME

The word "Name" is disclaimed, apart from the mark as shown, for registration purposes only.
FOR PRINTED PRESSURE-SENSITIVE ADHESIVE CLOTH TAPE LABELS.
Claims use since Jan. 1, 1947.

Ser. No. 520,740. THE LEHON COMPANY, Chicago, Ill. Filed Apr. 15, 1947.

FOR WALL CALENDARS, BOOKLETS, FOLDERS.
Claims use since September 1908.

Ser. No. 520,741. THE LEHON COMPANY, Chicago, Ill. Filed Apr. 15, 1947.

MULE-HIDE

FOR WALL CALENDARS, BOOKLETS, FOLDERS.
Claims use since September 1908.

CLASS 39

CLOTHING

Ser. No. 496,222. JOSEPH N. EISENDRATH COMPANY, Chicago, Ill. Filed Feb. 8, 1946.

SIERRA

FOR MEN'S GLOVES MADE OF LEATHER.
Claims use since Jan. 24, 1946.

Ser. No. 513,082. FRED P. WEISSMAN CO., Harrodsburg, Ky. Filed Nov. 22, 1946.

Sportleigh CLASSIC "PREP"

The words "Classic" and "Prep" are each separately disclaimed apart from the mark as shown, only for the purposes of this registration.
FOR BOYS', GIRLS', AND CHILDREN'S COATS AND SUITS.
Claims use since July 1945.

Ser. No. 566,036. JOHN SEXTON & Co., Chicago, Ill. Filed Sept. 28, 1948.

INVINSO

FOR DISHWASHING COMPOUND.
Claims use since Aug. 5, 1948.

Ser. No. 566,098. PFANSTIEHL DETERGENT CHEMICALS, INC., Chicago and Waukegan, Ill. Filed Sept. 29, 1948.

47

FOR DETERGENT WASHING POWDER WITH A WETTING AGENT ADDED.
Claims use since October 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 523,807. SOCIETE ANONYME RENAUD PARIS 1817, Montreuil (Seine), France. Original filed June 7, 1947, under the act of 1905; amended to application under act of 1946, Sept. 13, 1947. Under section 2f of the act of 1946.

Rénaud
PARIS
1817

Applicant claims ownership of French Registration No. 340,872, dated July 9, 1942.
FOR NAIL POLISH, FACE, HAND, BODY, AND HAIR LOTIONS.

Ser. No. 528,535. VICTOR CHEMICAL WORKS, Chicago, Ill. Filed July 12, 1947.

FYREX

FOR AMMONIUM PHOSPHATE AS A FLAME-PROOFING COMPOUND FOR USE IN TEXTILE AND PAPER MAKING.
Claims use since January 1931.

Ser. No. 530,773. ROYCE CHEMICAL COMPANY, Carlton Hill, N. J. Filed Aug. 7, 1947.

GUMOLITE

FOR SOLUBILIZED INSOLUBLE NATURAL GUM FOR THE THICKENING OF COLOR PASTES FOR USE IN PRINTING TEXTILE FABRICS, AND FOR FINISHING TEXTILE FABRICS.
Claims use since January 1938.

Ser. No. 537,270. MARY L. YAUMAN, doing business as The E & B Products Company, Youngstown, Ohio. Filed Oct. 8, 1947.

E B

Est-elle bonne?

No claim is made to the words "Est-Elle Bonne" apart from the mark as shown.
FOR HAND LOTIONS.
Claims use since July 15, 1947.

Ser. No. 536,170. PEDIAFORM LABORATORIES, INC., Santa Monica, Calif. Filed Oct. 17, 1947.

PEDIAFORM

FOR PEDIATRIC PHARMACEUTICAL PREPARATIONS INTENDED ESPECIALLY FOR USE BY INFANTS AND CHILDREN—NAMELY, COUGH SYRUPS, NOSE DROPS, CHEST RUBS, DIAPER RASH OINTMENTS, ASPIRIN, ANTIPYRETICS, ANTISPASMODICS, NARCOTICS, HYPNOTICS, SEDATIVES, LAXATIVES, ANTIBIOTICS, TABLETS, AMPULES, AND BIOLOGICALS, INCLUDING: ATROPINE SULFATE, ACETYLSALICYLIC ACID, ASCORBIC ACID, COUGH SYRUP, SULFADIAZINE, SULFAMERAZINE, LAXATIVE SYRUP, EXT. SENNA AND CASCARA COMPOUND, SULFA TRI-ONE, FERROUS GLUCONATE, SYRUP BROMIDES COMPOUND, EPHEDRINE AND PHENOBARBITAL, SULFATHIAZOLE, PHENOBARBITAL, BUTTOCKS CREME, LIQUID CHEST RUB, EAR DROPS, NOSE DROPS.
Claims use since June 3, 1947.

Ser. No. 542,757. FRANKLIN LABORATORIES, INC., Englewood, N. J. Filed Nov. 29, 1947.

KERATOGEN

Applicant claims ownership of Registration No. 395,558.
FOR PHARMACEUTICAL PREPARATION USED IN THE TREATMENT OF SKIN DISEASES AND AILMENTS.
Claims use since July 1, 1941.

Ser. No. 544,796. VELVET PHARMACEUTICAL PRODUCTS CO., INC., doing business as Velvet Products Co., New York, N. Y. Filed Dec. 18, 1947.

VELVET GUMEZE

The word "Gumeze" is disclaimed apart from the mark as shown.
FOR CREAM USED FOR EASING OF TEETHING PAINS AND PAINFUL GUMS.
Claims use since July 2, 1936.

Ser. No. 549,615. CARBIDE AND CARBON CHEMICALS CORPORATION, New York, N. Y. Filed Feb. 13, 1948.

UNOX

FOR SURFACE-ACTIVE CHEMICAL COMPOSITIONS FOR INCREASING THE PENETRATING, SURFACE SPREADING, AND EMULSIFYING PROPERTIES OF WATER AND FOR USE IN APPLICATIONS SUCH AS FIRE EXTINGUISHMENT AND ROCK-DUST AND COAL-DUST LAYING.
Claims use since Dec. 29, 1947.

Ser. No. 550,049. LION CHEMICAL COMPANY, Chicago, Ill. Filed Feb. 18, 1948.

ROYAL FLUSH

Applicant makes no claim to the word "Flush" alone.
FOR CHEMICAL PREPARATION FOR REMOVING RUST AND DIRT AND CLEANING THE COOLING SYSTEMS OF AUTOMOBILE RADIATORS.
Claims use since Feb. 2, 1948.

Ser. No. 551,882. FAEST & BESTHOFF, INC., New York, N. Y. Filed Mar. 13, 1948.

SPRIN-CLAR

FOR CALCIUM CHLORIDE COMPOUND.
Claims use since Nov. 6, 1947.

Ser. No. 552,813. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Mar. 23, 1948.

CREMOTRESAMIDE

Applicant claims ownership of Registration No. 500,418.
FOR ANTIBACTERIAL PREPARATION.
Claims use since Feb. 18, 1948.

Ser. No. 554,108. STANDARD LABORATORIES, INC., New York, N. Y. Filed Apr. 8, 1948.

MOPP

FOR ANTACID PREPARATION FOR USE IN TREATMENT OF HYPERACIDITY OF THE STOMACH.
Claims use since Mar. 9, 1948.

Ser. No. 556,023. PARFUMERIE AGNEL, SOCIETE A RESPONSABILITE LIMITEE, Paris, France. Filed May 1, 1948.

AGNEL

Applicant claims ownership of French Registration No. 306,508, dated Feb. 11, 1930.
FOR PERFUME, TOILET WATER, LIPSTICK, ROUGE, FACE POWDER, SKIN LOTIONS, COLOGNE, FACE CREAMS.

Ser. No. 550,225. STANDARD BRANDS INCORPORATED, New York, N. Y. Filed May 4, 1948.

BEE-FLEX

The word "Bee" is disclaimed.
FOR B-COMPLEX POWDER SOLD IN BULK TO THE FOOD AND PHARMACEUTICAL MANUFACTURING INDUSTRIES.
Claims use since July 9, 1940.

Ser. No. 556,954. EGYPTIAN CHEMICAL COMPANY, Boston, Mass. Filed May 13, 1948.

EGYPTIAN CAVITENE

FOR EMBALMING FLUID.
Claims use since Dec. 1, 1939.

Ser. No. 558,017. DONLEY-EVANS & COMPANY, St. Louis, Mo. Filed May 28, 1948.

GlucoSulfas

FOR MEDICINE, A BALANCED AND BUFFERED TRIPLE SULFONAMIDE MIXTURE.
Claims use since Apr. 8, 1948.

Ser. No. 558,274. BOTANY MILLS, INC., Passaic, N. J. Filed June 2, 1948.

LANOCAKE

FOR FACE POWDER IN COMPACT FORM CONTAINING LANOLIN.
Claims use since May 24, 1948.

Ser. No. 558,377. ENDO PRODUCTS INC., Richmond Hill, N. Y. Filed June 3, 1948.

ACON

FOR MEDICINE USED FOR VITAMIN A THERAPY.
Claims use since May 1, 1948.

Ser. No. 558,378. ENDO PRODUCTS INC., Richmond Hill, N. Y. Filed June 3, 1948.

FERCOSEN

FOR MEDICINE FOR TREATMENT OF VENEREAL DISEASES.
Claims use since Mar. 1, 1948.

Ser. No. 558,379. ENDO PRODUCTS INC., Richmond Hill, N. Y. Filed June 3, 1948.

TUBADIL

FOR MEDICINE USED FOR MUSCULAR RELAXATION.
Claims use since May 1, 1948.

Ser. No. 558,406. MIRA YOUNG, INC., New York, N. Y. Filed June 3, 1948.

Actif

FOR PERFUMES, TOILET WATERS, TOILET CREAMS, FACE LOTION.
Claims use since Apr. 12, 1948.

Ser. No. 558,520. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed June 4, 1948.

BONOBUFF

FOR ANTACID.
Claims use since May 24, 1948.

Ser. No. 558,521. SHARP & DOHME, INCORPORATED,, Philadelphia, Pa. Filed June 4, 1948.

METHAJADE

FOR BRONCHIAL MEDICAMENT HAVING SEDATIVE, ANALGESIC PROPERTIES.
Claims use since May 14, 1948.

Ser. No. 558,567. LENTHERIC INCORPORATED, New York, N. Y. Filed June 5, 1948.

Shanghai

FOR PERFUMES, TOILET WATER, FACE POWDER, BATH OIL, BATH ESSENCE, BATH SALTS, BUBBLE BATH SALTS, BATH POWDER, TALCUM POWDER, SACHET POWDER, SACHET CONCENTRATE, AND BRILLIANTINE.
Claims use since 1930.

Ser. No. 558,582. NUTRITION RESEARCH LABORATORIES, Chicago, Ill. Filed June 5, 1948.

ARTHRALGEN

FOR OINTMENT.
Claims use since May 1, 1948.

Ser. No. 558,583. WILLIAM GILBERT ORR, doing business as The Orrone Company, London, England. Filed June 5, 1948.

HELIOZONE

Applicant claims ownership of British Registration No. 557,705, dated Feb. 5, 1935.
FOR INHALENT IN LIQUID FORM FOR THE TREATMENT OF HAY FEVER, INFLUENZA, AND COMMON COLDS.

Ser. No. 559,009. GERMAINE A. DESAULNIERS, Niagara Falls, N. Y. Filed June 11, 1948.

FOR HERBAL LUNG TONIC.
Claims use since Apr. 10, 1948.

Ser. No. 559,120. ROCHE-ORGANON INC., Nutley, N. J. Filed June 12, 1948.

RULLON

FOR ANTISEPTIC SOLUTION.
Claims use since June 4, 1948.

Ser. No. 559,166. C. L. MCGRAW, Kathleen, Fla. Filed June 14, 1948. Under section 2f of the act of 1946.

McGRAW'S POLK EASY

FOR INSECTICIDE.
Claims use since 1926.

Ser. No. 559,237. NUTREN PRODUCTS, LIMITED, Windsor, Ontario, Canada. Filed June 15, 1948.

CAPIRON

Applicant claims ownership of Canadian Registration No. N. S. 23,939 Register 92, dated Oct. 26, 1946.
FOR IRON CAPSULES.

Ser. No. 559,770. HOUSE OF WESTMORE, INC., New York, N. Y. Filed Mar. 20, 1948.

TRU-GLO

FOR FACE POWDER.
Claims use since Mar. 10, 1948.

Ser. No. 560,386. THE DE PREE COMPANY, Holland, Mich. Filed June 29, 1948. Under section 2f of the act of 1946.

VERMI-TOX

Applicant claims ownership of Registration No. 408,127.
FOR INSECTICIDE IN LIQUID FORM.
Claims use since Aug. 28, 1922.

Ser. No. 560,764. LABORATOIRE VINCENT LABORATORY INC., Montreal, Quebec, Canada. Filed July 6, 1948.

UTANE 42

Applicant claims ownership of Canadian Registration No. 106 N. S. 27439.
FOR ANTISEPTIC.

Ser. No. 561,202. LO-CALORY FOOD CORPORATION, New York, N. Y. Filed July 12, 1948.

ALGEX

FOR TABLETS TO RELIEVE ALLERGY DISTRESS DUE TO VITAMIN C DEFICIENCY.
Claims use since June 7, 1048.

Ser. No. 563,387. NORMAN B. ALTERMAN, doing business as T & T Company, Peekskill, N. Y. Filed Aug. 14, 1948.

FOOT FINE

The word "Foot" is disclaimed apart from the mark as shown.
FOR FOOT OINTMENT AND LOTION.
Claims use since June 12, 1948.

Ser. No. 563,570. SAFETY FUMIGANT COMPANY, Boston and Hingham, Mass. Filed Aug. 4, 1948.

CYAN-CHLOR

Applicant claims ownership of Registration No. 257,943.
FOR CHEMICAL CONTAINING BRIQUETTES FOR GENERATING A TOXIC GAS TO DESTROY RATS, MICE, FLIES, ROACHES, BED BUGS, FLEAS, MOTHS, BUFFALO BUGS, BEETLES, AND MANY GERMS.
Claims use since June 4, 1948.

Ser. No. 564,084. C. A. MOSSO COMPANY, Chicago, Ill. Filed June 28, 1948.

Oil-O-Sol

Applicant claims ownership of Registration No. 264,366.
FOR INHIBITORY ANTISEPTIC USED AS A WET DRESSING.
Claims use since May 16, 1929.

Ser. No. 564,212. S. B. PENICK & COMPANY, New York, N. Y. Filed Aug. 20, 1928.

Evenized

FOR CASCARA BARK.
Claims use since August 1940.

Ser. No. 567,707. MCKESSON & ROBBINS, INCORPORATED, New York, N. Y. Filed Oct. 27, 1948.

Octofen

Applicant claims ownership of Registrations Nos. 281,829 and 281,830.
FOR FUNGICIDE.
Claims use since September 1947.

Ser. No. 567,902. BURROUGHS WELLCOME & Co. (U. S. A.) INC., Tuckahoe, N. Y. Filed Oct. 30, 1948.

'VAPOLOID'

FOR PREPARATION INTENDED FOR LOCAL APPLICATION TO THE NASAL MUCOUS MEMBRANE FOR THE PURPOSE OF REDUCING CONGESTION CAUSED BY COLDS, HAY FEVER, AND SIMILAR CONDITIONS.
Claims use since Sept. 15, 1948.

CLASS 7

CORDAGE

Ser. No. 560,713. LUDLOW MANUFACTURING & SALES CO., Boston, Mass. Filed July 3, 1948.

The drawing is lined to indicate the colors yellow and blue. The words "Every Foot Used Saves Money," "Made Only by Ludlow Mfg. & Sales Co., Boston, Mass.," and "Twine" are disclaimed apart from the mark. Applicant claims ownership of Registration No. 47,653.
FOR TWINE.
Claims use since Jan. 3, 1938.

Ser. No. 568,204. NORMAN LIBERTT, INC., New Rochelle, N. Y. Filed Nov. 4, 1948.

MOHAWK

FOR BRAIDED CORDAGE.
Claims use since Sept. 15, 1945.

Ser. No. 568,359. EASTERN STATES FARMERS' EXCHANGE, West Springfield, Mass. Filed Nov. 8, 1948. Under section 2f of the act of 1946.

EASTERN STATES

FOR BALER AND BINDER TWINE.
Claims use since May 1933.

Ser. No. 568,360. EASTERN STATES FARMERS' EXCHANGE, West Springfield, Mass. Filed Nov. 8, 1948. Under section 2f of the act of 1946.

No claim is made to the exclusive right to use "Cooperative" apart from the mark as shown.
FOR BALER AND BINDER TWINE.
Claims use since April 1945.

CLASS 10

FERTILIZERS

Ser. No. 528,408. ARMOUR AND COMPANY, Chicago, Ill. Filed July 12, 1947. Under section 2f of the act of 1946 as to "Jarecki's."

FOR FERTILIZER.
Claims use since 1920.

Ser. No. 544,004. TENNESSEE CORPORATION, also doing business under the name "U. S. Phosphoric Products," New York, N. Y. Filed Dec. 10, 1947. Under section 2f of the act of 1946.

The words "Co." and "Triple Phosphate" are disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 230,530.
FOR FERTILIZERS.
Claims use since August 1925.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 530,807. CHENEY LUMBER COMPANY, INC., Tacoma, Wash. Filed Aug. 8, 1947. Under section 2f of the act of 1946.

CHENEY

STUDS

The word "Studs" is disclaimed.
FOR LUMBER PRODUCT—NAMELY, 2 x 4 STUDDING FOR CONSTRUCTION PURPOSE.
Claims use since 1938.

Ser. No. 540,429. MARBLEHEAD LIME COMPANY, Chicago, Ill. Filed Nov. 7, 1947.

MARBLEHEAD

FOR LIME USED FOR INDUSTRIAL AND CONSTRUCTION PURPOSES.
Claims use since 1890.

Ser. No. 540,453. PLASTIC PRODUCTS COMPANY, Detroit, Mich. Filed Nov. 7, 1947. Under section 2f of the act of 1946.

PLASTI-GLAZE

Applicant claims ownership of Registration No. 384,742.
FOR GLAZING COMPOUND IN THE NATURE OF A PUTTY OR THE LIKE.
Claims use since 1939.

Ser. No. 545,789. SUN CHEMICAL CORPORATION, New York, N. Y. Filed Dec. 80, 1947.

Sun CHEMICAL CORPORATION

The words "Chemical Corporation" are disclaimed apart from the mark. Applicant claims ownership of Registration No. 158,828.
FOR CAULKING COMPOUNDS, WATERPROOFING COMPOUNDS OF IRREVERSIBLE INORGANIC GELS FOR IMPREGNATING MASONRY SURFACES AND BINDING THEREWITH, METALLIC POWDERED HARDENERS FOR UNSET CONCRETE FLOORS FOR APPLICATION AND INCORPORATION THEREIN BY DUSTING THEREWITH AND TROWELING AND BY SIMILAR METHODS.
Claims use since Nov. 28, 1945.

Ser. No. 546,089. CENTRAL DIVISION COMPANY, Chicago, Ill. Filed Jan. 3, 1948.

WEATHERBRIC

FOR ASPHALT INSULATED PANELS WHICH ARE ADAPTED FOR APPLICATION TO THE EXTERIORS OF BUILDINGS AS SIDING AND HAVE CONFIGURED OUTER SURFACES.
Claims use since Dec. 23, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 497,893. UNITED-CARR FASTENER CORPORATION, Cambridge, Mass. Original filed Mar. 8, 1946, under the act of 1905; amended to application under act of 1946, Oct. 6, 1947.

●

Applicant claims ownership of Registrations Nos. 121,544, 127,721, 276,809, and 276,810.
FOR FASTENERS, CONNECTORS, AND ATTACHING DEVICES OF VARIOUS TYPES USED IN THE HOUSEHOLD, CONSTRUCTION AND INDUSTRIAL ARTS FOR MOUNTING AND CONNECTING VARIOUS PARTS WHETHER OF FABRIC, WOOD, METAL, OR FIBERBOARD—NAMELY, SEPARABLE SNAP FASTENERS AND COMPONENT PARTS THEREOF, SCREW THREAD FASTENERS AND COMPONENT PARTS THEREOF, ROTARY STUD FASTENERS, RIVETS, GROMMETS, METALLIC WASHERS, RETAINING FASTENERS FOR CONSTRUCTION PANELS, PLUG BUTTONS; AND RETAINING FASTENERS FOR TUBING, STAMPED METAL KEYHOLDERS AND METAL MOLDINGS.
Claims use since May 3, 1913.

Ser. No. 521,389. JOHN W. HUDSON, New York, N. Y. Original filed Apr. 26, 1947, under the act of 1920; amended to application under act of 1946, Apr. 24, 1948.

ALTA

FOR FEED PIPES OR TUBING MADE OF METAL FOR FEEDING LIQUID FUEL TO ENGINES.
Claims use since Nov. 5, 1945.

Ser. No. 537,055. LOCKWOOD HARDWARE MFG. CO., Fitchburg, Mass. Filed Oct. 7, 1947. Under section 2f of the act of 1946.

Lockwood

Applicant claims ownership of Registration No. 391,376.
FOR BUILDER'S HARDWARE—NAMELY, DOOR STOPS, COAT AND HAT HOOKS, DOOR KNOBS, HANDLES, PULLS, SASH LIFTS, CASEMENT ADJUSTERS, DOOR HANDLE SETS, DOOR CLOSERS, AND PARTS OF THE AFORE-ENUMERATED HARDWARE.
Claims use since Jan. 1, 1895.

Ser. No. 555,017. THE RELIANCE GAUGE COLUMN COMPANY, Cleveland, Ohio. Filed Apr. 19, 1948.

Levalarm

FOR STEAM BOILER FITTINGS AND FURNISHINGS, COMPRISING A LIQUID LEVEL ALARM DEVICE TO INDICATE LOW OR HIGH LIQUID LEVELS IN BOILER DRUMS OR OTHER VESSELS.
Claims use since Mar. 23, 1948.

Ser. No. 555,502. RAYBESTOS-MANHATTAN, INC., Passaic, N. J. Filed Apr. 24, 1948.

Grey-Rock

FOR RIVETS.
Claims use since 1929.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 539,429. PERMO INCORPORATED, Chicago, Ill. Filed Mar. 17, 1948. Under section 2f of the act of 1946.

PERMOMETAL

Applicant claims ownership of Registration No. 396,914.
FOR NON-CORROSIVE AND WEAR-RESISTING ALLOYS OF THE PLATINUM GROUP METALS OR PLATINUM GROUP METALS IN COMBINATION WITH COBALT, TUNGSTEN, NICKEL, OR THE LIKE FOR USE IN THE MANUFACTURE OF PEN POINTS, INSTRUMENT PIVOTS, AND PHONOGRAPH NEEDLES.
Claims use since Sept. 2, 1941.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 526,613. M & H LABORATORIES, Chicago, Ill. Filed July 5, 1947.

M&H

FOR LIQUID SOLVENT FOR PRESERVING AND RESTORING USED PAINT AND VARNISH BRUSHES.
Claims use since Nov. 22, 1943.

Ser. No. 538,069. ARMSTRONG PAINT & VARNISH WORKS, Chicago, Ill. Filed Oct. 17, 1947. Under section 2f of the act of 1946.

HAWTHORNE

FOR READY MIXED PAINT SOLD IN LIQUID FORM, VARNISHES, AND PAINT ENAMELS.
Claims use since 1928.

Ser. No. 549,021. EDWARD SMITH & CO., INC., New York, N. Y. Filed Feb. 6, 1948.

ESCOTE

FOR PAINT USED FOR COATING PAPER AND CLOTH FOR INDUSTRIAL USE
Claims use since 1910.

Ser. No. 556,102. INTERCHEMICAL CORPORATION, New York, N. Y. Filed May 3, 1948.

Sidox

FOR PIGMENT MATERIAL FOR PAINTS AND VARNISHES HAVING INCIDENTAL INSULATING QUALITIES.
Claims use since Apr. 26, 1948.

CLASS 20

LINOLEUM AND OILED CLOTH

Ser. No. 508,507. ARMSTRONG CORK COMPANY, Lancaster, Pa. Original filed Sept. 5, 1946, under the act of 1905; amended to application under act of 1946, July 24, 1947. Under section 2f of the act of 1946.

ARMSTRONG A CORK COMPANY

Applicant disclaims the words "Cork" and "Company" apart from the mark substantially as shown. Applicant claims ownership of Registrations Nos. 94,859, 110,021, 196,378, 247,581, and 252,084.
FOR LINOLEUM AND FELT BASE, FLOOR AND WALL COVERINGS, BOTH PIECE GOODS AND RUGS; CORK CARPETS; HARD SURFACED FLOOR AND WALL COVERINGS HAVING A COMPOSITION WEARING SURFACE; PREFABRICATED DECORATIVE INSERTS OF LINOLEUM; LINOLEUM TILE; CORK TILE; RUBBER TILE; ASPHALT TILE; RESILIENT RESIN TILE; AND RESILIENT PLASTIC COMPOSITION TILE.
Claims use since Dec. 1, 1938.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 515,860. THOR CORPORATION, Chicago, Ill., by change of name from Electric Household Utilities Corporation. Original filed Jan. 17, 1947, under the act of 1905; amended to application under act of 1946, Dec. 1, 1947.

AUTOMAGIC

FOR ELECTRIC DISHWASHING MACHINES.
Claims use since Mar. 23, 1946.

Ser. No. 530,173. COLLINS RADIO COMPANY, Cedar Rapids, Iowa. Filed Aug. 1, 1947. Under section 2f of the act of 1946.

AUTOTUNE

FOR UNITARY MECHANICAL AND ELECTROMECHANICAL SELECTOR MECHANISMS FOR CONTROLLING THE AUTOMATIC SELECTIVE POSITIONING OF A ROTARY SHAFT SUCH FOR EXAMPLE AS A CONDENSER OR CONTROL SHAFT OF A RADIO SET.
Claims use since May 14, 1938.

Ser. No. 533,752. ROBERT HAMILTON LENT, doing business as Tnel Manufacturing Company, Hornell, N. Y. Filed Sept. 8, 1947.

TNEL

FOR ELECTRIC ARC WELDING MACHINES AND SPOT WELDING MACHINES.
Claims use since Aug. 23, 1946.

Ser. No. 541,112. E. A. LABORATORIES, INC., Brooklyn, N. Y. Filed Nov. 14, 1947.

Museatone

FOR ELECTRIC HORNS.
Claims use since 1940.

Ser. No. 541,713. SORENSEN AND COMPANY, INC., Stamford, Conn. Filed Nov. 19, 1947.

SORENSEN NOBATRON

No registration rights are claimed for the name "Sorensen" apart from the mark shown in the drawing, but applicant waives none of its common-law rights in said mark or any element thereof.
FOR VOLTAGE REGULATORS.
Claims use since Jan. 6, 1947.

Ser. No. 542,313. HEATING & AIR CONDITIONING SUPPLY, INC., Reno, Nev. Filed Nov. 25, 1947.

HASTO

FOR ELECTRICAL SPACE HEATERS; ELECTRICAL COMBINATION FAN AND SPACE HEATERS; ELECTRIC FANS (DESK, WALL, FLOOR STAND TYPE); ELECTRIC WATER HEATERS; ELECTRIC IRONS; ELECTRIC TOASTERS; ELECTRIC PERCOLATORS; ELECTRIC HOT PLATES; ELECTRIC HEATING PADS FOR GENERAL USE; ELECTRIC BLANKETS; ELECTRIC MIXERS FOR HOUSEHOLD USE; ELECTRIC DISH WASHERS; ELECTRIC GARBAGE GRINDERS ADAPTED FOR ATTACHMENT TO A KITCHEN SINK DRAIN; ELECTRIC ROASTERS; RANGES (ELECTRIC); BROILERS (ELECTRIC); DEEP FRYERS (ELECTRIC); BAKE OVENS (ELECTRIC).
Claims use since December 1942.

Ser. No. 543,667. STEWART-WARNER CORPORATION, Chicago, Ill. Filed Dec. 6, 1947.

AIR PAL

The word "Air" is disclaimed.
FOR RADIO RECEIVING SETS.
Claims use since Feb. 10, 1939.

Ser. No. 545,513. NATIONAL CYLINDER GAS COMPANY, Chicago, Ill. Filed Dec. 26, 1947.

NCG

FOR ELECTRICAL ARC WELDING MACHINES, WELDING UNITS AND PARTS THEREOF, CARBON ELECTRODES, ELECTRICAL CABLE AND ELECTRODE HOLDERS.
Claims use since 1935.

Ser. No. 548,543. RICHARD V. STAAF, Crafton, Pa. Filed Jan. 31, 1948.

STAF-LITE NEON SIGNS · · LIGHTING Crafton Penna.

The words "Lite," "Neon Signs · · Lighting" and "Crafton, Penna." are disclaimed.
FOR ELECTRICAL APPARATUS—NAMELY, LIGHTING FIXTURES, ADVERTISING AND DISPLAY SIGNS.
Claims use since Jan. 15, 1943.

Ser. No. 555,488. DURA ELECTRIC LAMP CO., INC., Newark, N. J. Filed Apr. 24, 1948.

DURAMATIC

FOR STARTER SWITCHES FOR FLUORESCENT LAMPS.
Claims use since June 20, 1947.

Ser. No. 556,003. JOHN E. FAST & CO., Chicago, Ill. Filed May 1, 1948.

MIJAKON

FOR CAPACITORS.
Claims use since Aug. 14, 1946.

Ser. No. 556,004. JOHN E. FAST & CO., Chicago, Ill. Filed May 1, 1948.

MIKASUB

FOR CAPACITORS.
Claims use since Apr. 8, 1948.

Ser. No. 556,643. MCQUAY-NORRIS MANUFACTURING CO., St. Louis, Mo. Filed May 10, 1948.

DYNOID

FOR SOLENOIDS, MECHANISMS INCORPORATING SOLENOIDS—NAMELY, VALVES FOR HEATING AND COOKING DEVICES, HYDRAULIC VALVES, WATER, STEAM, AND AIR VALVES, AND ELECTRIC CONTACTORS.
Claims use since April 1948.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 527,060. B. F. GLADDING & CO. INC., South Otselic, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

DUNDEE

FOR FISHING LINES.
Claims use since Aug. 22, 1912.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 489,542. C. TENNANT, SONS & CO. OF NEW YORK, New York, N. Y. Original filed Oct. 6, 1945, under the act of 1905; amended to application under act of 1946, Mar. 16, 1948. Under section 2f of the act of 1946.

GRIPLOCK

FOR MACHINES FOR MANUFACTURING IN WHOLE OR IN PART WIRE STRAPS USED FOR REINFORCING CARTONS AND PACKAGES IN TRANSPORTATION AND FOR TOOLS USED IN APPLYING SAID STRAPS FOR SERVICE.
Claims use since Jan. 1, 1921.

Ser. No. 506,321. JOHNSON MACHINE AND PRESS CORPORATION, Elkhart, Ind. Original filed July 26, 1946, under the act of 1905; amended to application under act of 1946, Sept. 2, 1947. Under section 2f of the act of 1946.

JOHNSON

FOR INCLINABLE POWER PRESSES.
Claims use since Jan. 1, 1942.

Ser. No. 523,814. WALTER KIDDE & COMPANY, INC., Belleville, N. J. Original filed June 7, 1947, under the act of 1905; amended to application under act of 1946, Oct. 20, 1947.

K Kidde

Applicant claims ownership of Registrations Nos. 334,376, 424,894, and 426,786.
FOR PORTABLE HAND FIRE EXTINGUISHERS, WHEELED PORTABLE HAND OPERATED FIRE EXTINGUISHING UNITS; FIRE EXTINGUISHING APPARATUS—NAMELY, INSTALLATIONS OF ONE OR MORE CONTAINERS FOR FIRE EXTINGUISHING MEDIUM, ONE OR MORE CONDUITS FOR CONVEYING THE MEDIUM FROM THE CONTAINER OR CONTAINERS TO THE PLACE OR PLACES TO BE PROTECTED, THE TERMINAL OF THE CONDUIT IN EACH OF SAID PLACES HAVING A DISCHARGE OUTLET FOR THE DISCHARGE OF THE MEDIUM INTO THE PROTECTED PLACE UPON OPENING OF A VALVE OR VALVES ASSOCIATED WITH THE CONTAINER OR CONTAINERS; PUMPS FOR RECHARGING CONTAINERS WITH FIRE EXTINGUISHING MEDIUM SUCH AS CARBON DIOXIDE; FIXED FIRE DETECTING AND EXTINGUISHING APPARATUS COMPRISING A SET OF CONDUITS LEADING FROM PROTECTED COMPARTMENTS OR SPACES TO A CENTRALLY LOCATED TERMINAL CABINET, A FAN FOR DRAWING SMOKE FROM FIRE IN ANY OF THE COMPARTMENTS OR SPACES, AN ELECTRIC EYE FOR DETECTING SMOKE IN THE CABINET AND FOR GIVING AN ALARM, AN INDICATOR FOR INDICATING THE LOCATION OF THE COMPARTMENT OR SPACE FROM WHICH THE SMOKE IS DRAWN, VALVES FOR RELEASING FIRE EXTINGUISHING MEDIUM THROUGH THE SAME CONDUIT FOR EXTINGUISHMENT OF THE FIRE, THE ENTIRE APPARATUS SOLD FOR INSTALLATION AS A UNIT; FIXED FIRE DETECTING APPARATUS COMPRISING A SET OF CONDUITS LEADING FROM PROTECTED COMPARTMENTS OR SPACES TO A CENTRALLY LOCATED TERMINAL OBSERVATION CABINET, A FAN FOR DRAWING SMOKE FROM FIRE IN ANY OF THE COMPARTMENTS OR SPACES TO THE CABINET FOR VISUAL OBSERVATION; APPARATUS FOR USE ON TEXTILE MACHINERY FOR CONTROLLING THE TENSION AND DENSITY OF YARN AS WOUND ON A PACKAGE; AND MACHINES FOR IMPREGNATING AND BONDING FIBROUS YARNS.
Claims use since on or about Dec. 1, 1940, on portable hand fire extinguishers and fire extinguishing apparatus; since on or about Oct. 15, 1942, on wheeled portable hand operated fire extinguishing units; since on or about Sept. 1, 1942, on recharge pumps; since on or about Sept. 1, 1943, on fixed fire detecting and extinguishing apparatus and fixed fire detecting apparatus; since on or about Jan. 2, 1946, on tension and density control devices; and since on or about Apr. 22, 1946, on machines for impregnating and bonding fibrous yarns.

Ser. No. 529,730. THE UNITED STATES AIR COMPRESSOR COMPANY, Cleveland, Ohio. Filed July 26, 1947.

FLOATING BODY

Applicant claims ownership of Registration No. 338,445
FOR AUTOMOTIVE VEHICLE LIFTS AND RECIPROCATING JACKS TO IMPROVE THE SERVICING AND THE LUBRICATING OF SAID VEHICLES.
Claims use since Nov. 11, 1935.

Ser. No. 530,709. BEAZLEY POWER MOWER CO., St. Petersburg, Fla. Filed Aug. 7, 1947. Under section 2f of the act of 1946 as to "Beazley."

BEAZLEY
Originator Rotary Suction

The notation "Originator Rotary Suction" is disclaimed apart from the mark shown.
FOR POWER OPERATED LAWN MOWERS.
Claims use since 1931 as to "Beazley"; and since Apr. 21, 1947, as shown.

Ser. No. 533,129. BOORUM & PEASE COMPANY, Brooklyn, N. Y. Filed Sept. 3, 1947.

MASTER

FOR HAND OPERATED PUNCH PRESSES FOR STATIONERY OF THE OFFICE VARIETY.
Claims use since 1941.

Ser. No. 533,132. BOORUM & PEASE COMPANY, Brooklyn, N. Y. Filed Sept. 3, 1947.

UNIVERSAL

FOR HAND OPERATED PUNCHES FOR STATIONERY OF THE OFFICE VARIETY.
Claims use since 1935.

Ser. No. 537,208. LYON METAL PRODUCTS, INCORPORATED, Aurora, Ill. Filed Oct. 8, 1947. Under section 2f of the act of 1946.

LYON

FOR ROLLER CONVEYORS FOR TRANSPORTING GOODS BY GRAVITY OR HAND PROPULSION AND PARTS OF SUCH CONVEYORS.
Claims use since Dec. 1, 1913.

Ser. No. 541,173. OVAL WOOD DISH CORPORATION, Tupper Lake, N. Y. Filed Nov. 14, 1947. Under section 2f of the act of 1946.

Ritespoon

Applicant claims ownership of Registration No. 405,656.
FOR SINGLE SERVICE, DISPOSABLE ONE-PIECE WOODEN SPOONS HAVING A SMALL BOWL AND A HANDLE, SIMILAR TO CONVENTIONAL METAL WARE.
Claims use since Dec. 3, 1938.

Ser. No. 541,174. OVAL WOOD DISH CORPORATION, Tupper Lake, N. Y. Filed Nov. 14, 1947. Under section 2f of the act of 1946.

Ritefork

Applicant claims ownership of Registration No. 405,655.
FOR SINGLE SERVICE, DISPOSABLE ONE-PIECE WOODEN FORKS HAVING A SMALL BOWL WITH THREE TINES AND A HANDLE, SIMILAR TO CONVENTIONAL METAL WARE.
Claims use since Jan. 11, 1939.

Ser. No. 546,074. HORACE P. WELLS, doing business as Welco Co., South Bend, Ind. Filed Jan. 2, 1948.

Carving Caddie

The word "Carving" is disclaimed.
FOR BLOCK OR TRAY USED FOR HOLDING A ROAST OF MEAT OR FOWL TO BE CARVED.
Claims use since Apr. 27, 1947.

Ser. No. 546,496. RAYMOND H. HOBROCK, Birmingham, Mich. Filed Jan. 8, 1948.

OLD GUIDE

FOR IMPLEMENTS FOR HOLDING AND SCALING FISH IN THE CLEANING THEREOF.
Claims use since Nov. 19, 1947.

Ser. No. 552,261. NORVELL-WILLIAMS, INC., Kansas City, Mo. Filed Mar. 18, 1948.

HUSTLER

FOR FLOUR BOLTERS.
Claims use since Jan. 15, 1941.

Ser. No. 559,876. CRANE PACKING COMPANY, Chicago, Ill., and Wilmington, Calif. Filed June 11, 1948.

Lapmaster

The design feature is disclaimed apart from the mark.
FOR GRINDING, POLISHING, AND LAPPING MACHINES AND PARTS THEREOF.
Claims use since Mar. 23, 1948.

CLASS 26
MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 459,274. SQUARE D COMPANY, Detroit, Mich. Original filed Mar. 22, 1943, under the act of 1905; amended to application under act of 1946, Sept. 5, 1947.

SARD

FOR OPTICAL INSTRUMENTS—NAMELY, BINOCULARS, AND PARTS THEREOF.
Claims use since Feb. 26, 1943.

Ser. No. 499,025. TAYLOR, TAYLOR & HOBSON, LIMITED, Leicester, England. Original filed Mar. 26, 1946, under the act of 1905; amended to application under act of 1946, Aug. 25, 1947. Under section 2f of the act of 1946.

TAYLOR-HOBSON

Applicant claims ownership of British Registration No. 606,448.
FOR PHOTOGRAPHIC CAMERAS; OPTICAL INSTRUMENTS—NAMELY, OPTICAL GAUGING INSTRUMENTS, OPTOMETERS, ALIGNMENT TELESCOPES, AUTOCOLLIMATORS, PROFILE PROJECTORS AND LENSES; AND PRECISION MEASURING INSTRUMENTS—NAMELY, LINEAR DIMENSION GAUGES, SURFACE ROUGHNESS GAUGES AND PEN RECORDERS ADAPTED FOR USE WITH SCIENTIFIC INSTRUMENTS FOR RECORDING PURPOSES.
Claims use since 1909.

Ser. No. 533,922. REMINGTON OPTICAL CORPORATION, New York, N. Y. Filed Sept. 9, 1947.

JUNO

FOR EYEGLASS FRAMES.
Claims use since Apr. 1, 1946.

Ser. No. 533,923. REMINGTON OPTICAL CORPORATION, New York, N. Y. Filed Sept. 9, 1947.

JUPITER

FOR EYEGLASS FRAMES.
Claims use since Apr. 1, 1946.

Ser. No. 541,117. THE RAY EWING COMPANY, South Pasadena, Calif. Filed Nov. 14, 1947.

MOISTROL

FOR SELF-MEASURING LIQUID VITAMIN DISPENSING UNIT, COMBINING A MORTAR AND PUMP.
Claims use since Jan. 16, 1947.

Ser. No. 544,506. BAILEY METER COMPANY, Cleveland, Ohio. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

BAILEY

METER

The word "Meter" is disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 335,079.
FOR MEASURING, CONTROLLING, AND REGULATING INSTRUMENTS, SYSTEMS, AND APPARATUS—NAMELY, RECORDERS, INDICATORS, INTEGRATORS, REGULATORS AND CONTROLLERS OF COMBUSTION, OF PROCESSES, AND OF FLUID FLOW AND CONDITIONS PERTINENT TO FLUIDS SUCH AS RATE OF FLOW, LEVEL, TEMPERATURE, AND PRESSURE; REMOTE RECORDING, INDICATING, INTEGRATING, CONTROLLING AND TELEMETERING INSTRUMENTS, ADJUSTABLE ORIFICES AND OTHER APPARATUS APPURTENANT TO SUCH INSTRUMENTS; GAS ANALYZERS, INSTRUMENT AND CONTROL PANEL BOARDS, TIME CYCLE INSTRUMENTS AND CONTROLLERS, WEIGHING SCALES, AND ELECTRIC AND FLUID PRESSURE SELECTOR SWITCHES; PRESSURE, TEMPERATURE, LEVEL AND FLUID FLOW RESPONSIVE CONTROL VALVES; AND CHARTS PECULIAR TO THE OPERATION OF SAID INSTRUMENTS AND APPARATUS.
Claims use since Feb. 2, 1938.

Ser. No. 544,507. BAILEY METER COMPANY, Cleveland, Ohio. Filed Sept. 26, 1947. Under section 2f of the act of 1946.

The word "Meter" and the representation of a chart are disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 337,061.

FOR MEASURING, CONTROLLING, AND REGULATING INSTRUMENTS, SYSTEMS, AND APPARATUS—NAMELY, RECORDERS, INDICATORS, INTEGRATORS, REGULATORS AND CONTROLLERS OF COMBUSTION, OF PROCESSES, AND OF FLUID FLOW AND CONDITIONS PERTINENT TO FLUIDS SUCH AS RATE OF FLOW, LEVEL, TEMPERATURE, AND PRESSURE; REMOTE RECORDING, INDICATING, INTEGRATING, CONTROLLING AND TELEMETERING INSTRUMENTS, ADJUSTABLE ORIFICES AND OTHER APPARATUS APPURTENANT TO SUCH INSTRUMENTS; GAS ANALYZERS, INSTRUMENT AND CONTROL PANEL BOARDS, TIME CYCLE INSTRUMENTS AND CONTROLLERS, WEIGHING SCALES, AND ELECTRIC AND FLUID PRESSURE SELECTOR SWITCHES; PRESSURE, TEMPERATURE, LEVEL AND FLUID FLOW RESPONSIVE CONTROL VALVES; AND CHARTS PECULIAR TO THE OPERATION OF SAID INSTRUMENTS AND APPARATUS.
Claims use since Feb. 2, 1933.

Ser. No. 553,054. AMERICAN OPTICAL COMPANY, Southbridge, Mass. Filed Mar. 26, 1948.

LAUREL

FOR OPHTHALMIC FRAMES AND MOUNTINGS.
Claims use since Dec. 16, 1947.

Ser. No. 558,150. MARBLE ARMS & MFG. COMPANY, Glasstone, Mich. Filed May 29, 1948. Under section 2f of the act of 1946.

MARBLE'S

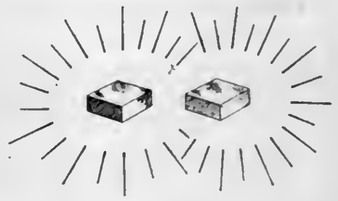
FOR COMPASSES.
Claims use since 1910.

Ser. No. 559,061. SILLS & GREENE OPTICAL CORP., Brooklyn, N. Y. Filed June 11, 1948.

MIRRO-LITE

The word "Lite" is disclaimed apart from the mark.
FOR SUNGLASSES AND LENSES FOR GLASSES.
Claims use since Apr. 5, 1948.

CLASS 28



JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 530,322. S. LAZARUS & SONS, INC., Chicago, Ill. Filed Aug. 2, 1947. Under section 2f of the act of 1946.

GOLD MEDAL

No claim is made to the exclusive right to the use of a medal colored or made of gold. Applicant claims ownership of Registration No. 271,581.
FOR FINGER RINGS.
Claims use since Apr. 15, 1929.

Ser. No. 530,936. THE INTERNATIONAL SILVER COMPANY, Meriden, Conn. Filed Aug. 9, 1947.

The mark may be described as two separated blocks, each of rectangular configuration, and with fanciful ray-like emanations radiating from each block.
FOR SILVER-PLATED FLAT-WARE.
Claims use since June 18, 1940.

Ser. No. 560,025. KOVEN BROS., New York, N. Y. Filed June 23, 1948.

TETE A TETE

FOR FINGER RINGS.
Claims use since Mar. 3, 1948.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Ser. No. 549,392. THE MOREY MERCANTILE COMPANY, Denver, Colo. Filed Nov. 22, 1947.

SILVER BAND

Applicant claims ownership of Registration No. 139,353.
FOR BROOMS.
Claims use since Nov. 1, 1919.

Ser. No. 549,393. THE MOREY MERCANTILE COMPANY, Denver, Colo. Filed Nov. 22, 1947.

Solitaire

Applicant claims ownership of Registration No. 138,068.
FOR BROOMS.
Claims use since Nov. 1, 1919.

Ser. No. 557,073. SAFEWAY STORES, INCORPORATED, Oakland, Calif. Filed May 14, 1948.

BUDGET

FOR BROOMS.
Claims use since Feb. 20, 1948.

Ser. No. 566,276. HALEX LIMITED, London, England. Filed Aug. 31, 1948.

RONDATED

Applicant claims ownership of British Registration No. 650,671, dated June 2, 1947.
FOR TOOTHBRUSHES, HAIR BRUSHES, NAIL BRUSHES, AND SHAVING BRUSHES.

CLASS 32

FURNITURE AND UPHOLSTERY

Ser. No. 515,668. METAL OFFICE FURNITURE CO., Grand Rapids, Mich. Original filed Jan. 13, 1947, under the act of 1905; amended to application under act of 1946, Dec. 13, 1947. Under section 2f of the act of 1946.

STEELCASE

FOR METAL FILING CABINETS, METAL STORAGE CASES, METAL TABULATING CARD FILES, METAL DESK TRAYS, METAL COSTUMERS, METAL DOCUMENT FILE CASES, METAL SECTIONAL FILING EQUIPMENT, METAL OFFICE TABLES, METAL OFFICE CHAIRS, METAL OFFICE DESKS AND TELEPHONE STANDS, METAL BOOKCASES.
Claims use since Jan. 31, 1920.

Ser. No. 541,149. THE LAMSON & SESSIONS CO., Cleveland, Ohio. Filed Nov. 14, 1947.

TREASURE CHEST

The word "Chest" is disclaimed.
FOR MERCHANDISING CABINETS.

TRADE-MARK REGISTRATIONS GRANTED

ACT OF 1905

442,972. MECHANICAL FLUID STRAINING AND FILTERING APPARATUS FOR USE AS ACCESSORIES FOR INTERNAL COMBUSTION ENGINES, AND REPLACEMENT FILTERING ELEMENTS FOR SAID APPARATUS. DIESEL FILTER CO., El Monte, Calif.

Filed Jan. 15, 1944, Serial No. 466,608. Published Mar. 15, 1949. Class 31.

442,973. ELECTRIC TERMINALS AND CONTACTS; TROLLEY SHOES; SWITCH CONTACTS; ELECTRIC RESISTANCE AND FLASH WELDING ELECTRODES; AND ELECTRODE HOLDERS, ETC. AMPCO METAL, INC., Milwaukee, Wis.

Filed Feb. 2, 1945, Serial No. 479,323. Published Aug. 6, 1946. Class 21.

442,974. MARINE BOATS UNDER 75 FEET IN LENGTH, EXCLUDING TOY BOATS. GUST KALYBABA, Kirkland, Wash.

Filed July 26, 1945, Serial No. 486,306. Published Feb. 8, 1949. Class 19.

442,975. SWEATERS AND HOSIERY. HEALTHGUARD KNITWEAR LIMITED, Leicester, England.

Filed Mar. 12, 1946, Serial No. 498,064. Published Mar. 1, 1949. Class 39.

442,976. ATTACHMENT TO THE NECK OF A SPIRITS BOTTLE FOR USE IN DISPENSING LIQUORS IN A KNOWN QUANTITY. MODERN ENGINEERING AND DEVELOPMENT CO., Los Angeles, Calif., assignor to Modern Sales Co., a copartnership.

Filed Apr. 6, 1946, Serial No. 499,795. Published Mar. 15, 1949. Class 26.

442,977. HEAT CONDUCTING ADHESIVE CEMENT COMPOSED OF GROUND FIRED CERAMIC MATERIAL WHICH UPON SETTING IS RESISTANT TO DECOMPOSITION BY HEAT, AND WHICH FOR USE IS MIXED WITH AN AQUEOUS SOLUTION OF A CRYSTALLIZING SALT SUCH AS SILICATE OF SODA CAUSING THE MATERIAL TO SET OR HARDEN BY CRYSTALLIZATION, ETC. UNITED STATES QUARRY TILE COMPANY, Canton and East Sparta, Ohio, and Parkersburg, W. Va.

Filed July 1, 1946, Serial No. 504,947. Published Feb. 8, 1949. Class 5.

442,978. HEAT CONDUCTING ADHESIVE CEMENT COMPOSED OF GROUND FIRED CERAMIC MATERIAL WHICH UPON SETTING IS RESISTANT TO DECOMPOSITION BY HEAT, ETC. UNITED STATES QUARRY TILE COMPANY, Canton and East Sparta, Ohio, and Parkersburg, W. Va.

Filed July 1, 1946, Serial No. 504,949. Published Feb. 8, 1949. Class 5.

442,979. SYNTHETIC ADHESIVE CEMENT—NAMELY, SYNTHETIC POLYMER OF A RESIN TYPE FOR LAMINATING AND BONDING TOGETHER WOOD, TEXTILES, FABRICS, PAPER, AND VARIOUS COMPOSITION MATERIALS. BEAUTYKOTE CORPORATION, Newark, N. J.

Filed Aug. 9, 1946, Serial No. 507,096. Published Jan. 4, 1949. Class 5.

442,980. SYNTHETIC ADHESIVE CEMENT—NAMELY, SYNTHETIC POLYMERS OF A RESIN TYPE FOR LAMINATING AND BONDING TOGETHER WOOD, TEXTILES, FABRICS, PAPER, AND VARIOUS COMPOSITION MATERIALS. TEX PRODUCTS, INC., Newark, N. J.

Filed Aug. 9, 1946, Serial No. 507,155. Published Jan. 11, 1949. Class 5.

442,981. CANNED FISH. BRISTOL BAY PACKING COMPANY, also doing business under the name Alaska Salmon Company, Seattle, Wash.

Filed Sept. 10, 1946, Serial No. 508,783. Published July 22, 1947. Class 46.

442,982. TRAILERS, TRUCK TRAILERS, AND PARTS THEREFOR. MUSTANG TRAILER COMPANY, Dallas, Tex.

Filed Nov. 2, 1946, Serial No. 511,953. Published Sept. 2, 1947. Class 19.

442,983. GLUE. THE CUDAHY PACKING CO., Chicago, Ill.

Filed Nov. 14, 1946, Serial No. 512,581. Published May 11, 1948. Class 5.

442,984. RADIO RECEIVERS. STEWART-WARNER CORPORATION, Chicago, Ill.

Filed Nov. 25, 1946, Serial No. 513,221. Published Apr. 20, 1948. Class 21.

442,985. FOOD FLAVORING EXTRACTS AND FOOD FLAVORS, ETC. HENRY HEIMAN, doing business as H. Heiman Company, New York, N. Y.

Filed Jan. 2, 1947, Serial No. 515,177. Published Mar. 15, 1949. Class 46.

442,986. CANNED HAM, BACON, CANNED PORK SHOULDER, CANNED CORNED BEEF HASH, CANNED SAUSAGE, AND CANNED SAUER KRAUT. TRUNZ, INCORPORATED, Brooklyn, N. Y.

Filed Jan. 3, 1947, Serial No. 515,240. Published Mar. 8, 1949. Class 46.

442,987. CANNED VEGETABLES, FRUITS AND BERRIES, CANNED OR BOXED SPICES, ETC. BENTLEY, SETTLE & CO. INC., Syracuse, N. Y.

Filed Jan. 16, 1947, Serial No. 515,814. Published Mar. 0, 1948. Class 46.

442,988. DIAL NUMERALS AND WATCH HANDS MADE OF PRECIOUS METAL AND ADAPTED FOR MOUNTING ON WATCH DIALS. DU BERN COMPANY, INC., Passaic, N. J.

Filed Feb. 24, 1947, Serial No. 517,977. Published Mar. 22, 1949. Class 27.

442,989. OPTICAL BENCHES, OPTICAL KITS, PRISM ASSEMBLIES, INDIVIDUAL LENSES AND PRISMS. CHARLES W. NORTH, doing business as Industrial Service, Minneapolis, Minn.

Filed Mar. 6, 1947, Serial No. 518,620. Published Mar. 15, 1949. Class 26.

442,990. ELECTRICAL APPARATUS FOR DETECTING THE ANGULAR LOCUS OF STATIC AND DYNAMIC UNBALANCE OF WHEELS. STEWART WARNER CORPORATION, Chicago, Ill.

Filed Mar. 29, 1947, Serial No. 519,839. Published Mar. 15, 1949. Class 26.

442,991. FLUID OPERATED AUTOMOBILE ACCESSORIES—NAMELY, FLUID OPERATED WINDSHIELD CLEANERS OF THE SQUEEGEE TYPE, AND PARTS THEREOF INCLUDING FLUID MOTORS, BLADES, AND ARMS, ETC. TRICO PRODUCTS CORPORATION, Buffalo, N. Y.

Filed Apr. 19, 1947, Serial No. 521,040. Published Feb. 8, 1949. Class 19.

442,992. BICYCLES. D. P. HARRIS HARDWARE & MANUFACTURING CO., INC., New York, N. Y.

Filed May 5, 1947, Serial No. 521,882. Published Feb. 8, 1949. Class 19.

442,993. MACARONI, SPAGHETTI, AND EGG NOODLES. WORLD PACKING COMPANY, INC., New York, N. Y., and Trenton, N. J.

Filed May 12, 1947, Serial No. 522,276. Published Mar. 15, 1949. Class 46.

442,994. CANNED TOMATO COCKTAIL SAUCE. McKEON CANNING CO., INC., Burbank, Calif.
Filed May 16, 1947, Serial No. 522,473. Published Mar. 15, 1949. Class 46.

442,995. RADAR AND COMPUTER APPARATUS—NAMELY, EQUIPMENT AND PARTS THEREOF, ETC. REEVES INSTRUMENT CORPORATION, New York, N. Y.
Filed May 22, 1947, Serial No. 522,804. Published Mar. 15, 1949. Class 26.

442,996. POWER BOATS AND ROW BOATS. HARWILL, INC., St. Charles, Mich.
Filed May 22, 1947, Serial No. 522,807. Published Feb. 8, 1949. Class 19.

442,997. SHOES. BREVITT SHOES LIMITED, Leicester, England.
Filed May 23, 1947, Serial No. 522,916. Published Feb. 8, 1949. Class 39.

442,998. THIN SHEETS OF COLORED TRANSPARENT AND TRANSLUCENT HEAT- AND MOISTURE-PROOF PLASTIC FILM SOLD IN SHEETS OR FROM THE ROLL FOR USE AS COLOR SCREENS FOR SPOTLIGHTS. TRANSOLENE CORPORATION, Barrington, Ill.
Filed June 5, 1947, Serial No. 523,628. Published Feb. 15, 1949. Class 34.

442,999. BICYCLES. D. P. HARRIS HARDWARE & MANUFACTURING CO., INC., New York, N. Y.
Filed June 27, 1947, Serial No. 524,981. Published Feb. 8, 1949. Class 19.

443,000. BICYCLES. D. P. HARRIS HARDWARE & MANUFACTURING CO., INC., New York, N. Y.
Filed June 27, 1947, Serial No. 524,985. Published Feb. 8, 1949. Class 19.

443,001. LIQUID PREPARATIONS FOR HOUSEHOLD OR INDUSTRIAL USE HAVING DEODORANT AND INSECTICIDAL PROPERTIES. SUPER-X, INC., Cleveland, Ohio, now by change of name Quel Products Inc., a corporation of Ohio.
Filed July 3, 1947; Serial No. 525,980. Published Mar. 22, 1949. Class 6.

443,002. FORCED DRAFT WALL AND CEILING VENTILATORS AND HOUSINGS CONTAINING A VENTILATING FAN. FAN & BLOWER CORP., Brooklyn, N. Y.
Filed July 4, 1947, Serial No. 526,211. Published Mar. 22, 1949. Class 34.

443,003. OIL BURNERS. GEORGE STRYSKO, Flushing, N. Y.
Filed July 4, 1947, Serial No. 526,309. Published Mar. 8, 1949. Class 34.

ACT OF 1920

These registrations are not subject to opposition.

443,004. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) AMERICAN HYDRAULICS, INC., Sheboygan, Wis. Filed Dec. 19, 1945, Serial No. 493,526.

AMERICAN SAFETY POWER SPEED HAS NO EQUAL

FOR HYDRAULIC JACKS, HYDRAULIC AUTOMOBILE FENDER STRAIGHTENERS, HAND OPERATED BENCH TOOL GRINDERS, AND VISES.
Claims use since 1938.

ACT OF 1946, PRINCIPAL REGISTER

511,533. VEHICLE AXLES AND PARTS THEREOF—NAMELY, AXLE HOUSINGS SOLID AXLES, STEERING KNUCKLES, WHEELS, AND HUBS. THE TIMKEN-DETROIT AXLE COMPANY, Detroit, Mich.
Original filed Dec. 18, 1944, under the act of 1905; amended to application under act of 1946, Aug. 13, 1947, Serial No. 477,724. Published Feb. 8, 1949. Class 19.

511,534. EQUIPMENT FOR USE IN THE GRAPHIC ARTS INDUSTRY, TO WIT: RUBBER PLATE MACHINES, PLATE WHIRLERS, LAYOUT TABLES, VACUUM PRINTING FRAMES, CONTACT PRINTING FRAMES, RUB-UP TABLES, DEVELOPING TROUGHS, AND PORTABLE PLATEMAKERS. AMERICAN TYPE FOUNDERS SALES CORPORATION, Elizabeth, N. J.
Original filed May 19, 1945, under the act of 1905; amended to application under act of 1946, Nov. 20, 1947, Serial No. 483,563. Published Mar. 15, 1949. Class 23.

511,535. HEAT EXCHANGERS FOR HEATING WATER WITH STEAM OR HOT WATER, INDIRECT WATER HEATERS, EXPANSION TANKS, ETC. BELL & GOSSETT COMPANY, Morton Grove, Ill.
Original filed Dec. 27, 1945, under the act of 1905; amended to application under act of 1946, Aug. 15, 1947, Serial No. 493,910. Published Mar. 8, 1949. Class 34.

511,536. MOTOR BUSSES AND MOTOR BUS BODIES. ACF-BRILL MOTORS COMPANY, Philadelphia, Pa.
Original filed Jan. 10, 1946, under the act of 1905; amended to application under act of 1946, May 6, 1948, Serial No. 494,533. Published Mar. 8, 1949. Class 19.

511,537. AGRICULTURAL MACHINES AND PARTS THEREOF—NAMELY, HAND OR POWER OPERATED NEEDLES AND PUMPS FOR THE INJECTION OF FERTILIZING AND TREATMENT LIQUIDS IN THE SOIL, AND SPRAYING APPARATUS. BERTRAND ROGER GLAENZER, Paris, France.
Original filed Jan. 23, 1946, under the act of 1905; amended to application under act of 1946, Oct. 15, 1947, Serial No. 495,230. Published Mar. 15, 1949. Class 23.

511,538. PEDAL-OPERATED JIG SAW FOR THERAPEUTIC PURPOSES. RUSSELL O. STEINER, St. Louis, Mo., assignee of Thera-Cycle Company.
Original filed Feb. 1, 1946, under the act of 1905; amended to application under act of 1946, Nov. 29, 1947, Serial No. 495,845. Published Mar. 15, 1949. Class 23.

511,539. UPPER LEATHER. BEGGS & COBB, INCORPORATED, Boston, Mass.
Original filed Feb. 4, 1946, under the act of 1905; amended to application under act of 1946, July 29, 1948, Serial No. 495,949. Published Mar. 22, 1949. Class 1.

511,540. EARTH MOVING MACHINERY AND EQUIPMENT—NAMELY, EARTH MOVERS, SCRAPERS, BULLDOZERS, RIPPERS, TAMPING ROLLERS, POWER TAKE-OFF UNITS AND PARTS THEREOF. WOOLDRIDGE MANUFACTURING COMPANY, Sunnyvale, Calif.
Original filed Feb. 4, 1946, under the act of 1905; amended to application under act of 1946, Oct. 24, 1947, Serial No. 496,003. Published Mar. 15, 1949. Class 23.

511,541. OUTBOARD MOTORS. NATIONAL PRESSURE COOKER COMPANY, Eau Claire, Wis.
Original filed May 16, 1946, under the act of 1905; amended to application under act of 1946, Oct. 25, 1947, Serial No. 502,223. Published Mar. 15, 1949. Class 23.

511,542. FRESH CITRUS FRUITS. SAN FERNANDO FRUIT GROWERS ASSOCIATION, San Fernando, Calif.
Original filed May 21, 1946, under the act of 1905; amended to application under act of 1946, Oct. 4, 1947, Serial No. 502,535. Published Mar. 15, 1949. Class 46.

511,543. FROZEN FOOD CABINETS FOR STORING AND KEEPING FOODS OF ALL KINDS AT A TEMPERATURE AT OR BELOW FREEZING TEMPERATURE. THE PURE OIL COMPANY, Chicago, Ill.
Original filed June 6, 1946, under the act of 1905; amended to application under act of 1940, Jan. 10, 1948, Serial No. 503,388. Published Oct. 12, 1948. Class 31.

511,544. FINGER RINGS, DIAMOND RINGS, WEDDING RINGS, AND FINGER RING MOUNTINGS. ARTHUR G. RIDER, doing business as A. G. Rider, Binghamton, N. Y.
Original filed Aug. 5, 1946, under the act of 1905; amended to application under act of 1940, Feb. 16, 1948, Serial No. 506,896. Published Mar. 22, 1949. Class 28.

511,545. SCAFFOLD HORSES. DABNEY ASHENFELTER, doing business as Bil-Jax Manufacturing Co., Swanton, Ohio, assignor to Bil-Jax, Inc., Archbold, Ohio, a corporation of Ohio.
Original filed Aug. 8, 1946, under the act of 1905; amended to application under act of 1946, July 11, 1947, Serial No. 507,035. Published Mar. 22, 1949. Class 50.

511,546. OIL WELL SURVEYING INSTRUMENTS, FOR RECORDING INCLINATION AND DEVIATION OF OIL WELLS, AND ORIENTING INSTRUMENTS FOR DETERMINING THE POSITION OF DEVICES WITHIN WELL BORES. EASTMAN OIL WELL SURVEY COMPANY, Denver, Colo.
Original filed Aug. 20, 1946, under the act of 1905; amended to application under act of 1946, Aug. 22, 1947, Serial No. 507,675. Published Mar. 15, 1949. Class 26.

511,547. SINGLE TREES, DOUBLE TREES, NECK YOKES, SINGLE TREE CLIPS, ETC. NIXDORFF-KREIN MFG. CO., St. Louis, Mo.
Original filed Sept. 26, 1946, under the act of 1905; amended to application under act of 1946, July 10, 1947, Serial No. 509,789. Published Mar. 1, 1949. Class 19.

511,548. FRESH CITRUS FRUITS. BROWNSVILLE CITRUS ASSOCIATION, Brownsville, Tex.
Original filed Dec. 13, 1946, under the act of 1905; amended to application under act of 1946, Nov. 14, 1947, Serial No. 514,177. Published Mar. 8, 1949. Class 46.
